Comments

Hazards identified during an inspection should be corrected as soon as they are identified. For any that can't be immediately corrected, set a target date for correction based on such considerations as the probability and severity of an injury or illness resulting from the hazard; the availability of needed equipment, materials and/or personnel; time for delivery, installation, modification or construction; and training periods. All corrective actions must be documented.

Risk Management/EHOS is available to provide guidance in correcting hazards identified as a result of an inspection. All hazards identified must be corrected and actions documented.
