Modeling Peer-Review Group for the Los Angeles SIP Air Quality Modeling

TEJAS SHAH

Managing Consultant

Tejas Shah has over 15 years' experience with air pollution analyses. His expertise includes emission modeling, air quality modeling, emission inventory development, spatial analysis with GIS, database tool development, control-measure evaluation and economic impact analysis. He provided GIS support to developing oil and gas emissions inventories for current and future years in the western US for the Western Regional Air Partnership (WRAP). He has recently managed a review of available emission inventories for Mexico that are used in photochemical modeling studies of North America in which we used satellite-derived data products for sulfur dioxide (SO₂), nitrogen dioxide (NO₂) and natural gas flaring to evaluate spatial characterization and magnitude of the emissions inventories. Tejas has managed photochemical modeling studies for the US and other world regions in which key model inputs, such as the emission inventories and landuse inputs, depend on GIS analyses of geospatial data. Additionally, he has extensive experience using the RPOs emissions inventory, the USEPA's national emissions inventory (NEI) and the Environment Canada national inventory. Tejas' work at Ramboll includes Sparse Matrix Operator Kernel Emissions (SMOKE) processing of regional and project-level emission inventories for various oil and gas EIS projects in the Intermountain West; preparing gridding surrogates and speciation profiles for the SMOKE model input; augmenting SPECIATE—a repository of speciation profiles; spatial analyses and preparing landuse/landcover files for the Comprehensive Air Quality Model with extensions (CAMx) and MEGAN models using GIS; and developing database tools.

EDUCATION

2000-2003

MS, Chemical Engineering

Lamar University, Beaumont, Texas, United States

1996-2000

BS, Chemical Engineering

Mumbai University, Mumbai, India

SELECTED RELEVANT EXPERIENCE

Ozone Air Quality Modeling of the Arabian Gulf

- Managed emission inventory modeling for a confidential air quality study in the Middle East. Ramboll developed a photochemical ozone modeling system based on the Comprehensive Air quality Model with extensions (CAMx).
- Developed a comprehensive emission inventory of ozone precursors (NO_x, VOC and CO) for the Kingdom of Bahrain. The inventory was compiled using publicly-available data to characterize

stationary sources, mobile sources and area sources and support photochemical ozone modeling.

- Managing emission inventory modeling for a confidential study in the Middle East to assess the environmental impacts of changes to transportation infrastructure and emissions.

Air Quality and Emissions Modeling Support to EPA OAQPS

- Developed ancillary files for processing oil and gas emissions for use in the EPA's national modeling platform. Work included development and assignment of speciation profiles for WRAP Phase III oil and gas source categories, development and assignment of spatial surrogates, and preparation of inventory input files for SMOKE.

BOEM Air Quality Impacts of Off-Shore Oil and Gas Production

- Currently managing regional emissions modeling for analyzing the on-shore air quality impacts of outer continental shelf oil and gas development in the Arctic Sea near Alaska and the Gulf of Mexico. This multi-year multi-million dollar study will project future year emissions and air quality impacts and develop emission exception screening thresholds.

Allegheny County PM2.5 State Implementation Plans

- Task Manager for developing emissions input for air quality modeling to demonstrate that Allegheny County (Pittsburgh), Pennsylvania will attain the PM2.5 National Ambient Air Quality Standard (NAAQS).

Western Regional Air Partnership (WRAP) Region-Wide Emissions Inventory

- Provided GIS support in developing a region-wide O&G emissions inventory for current and future years in the western US for the Western Regional Air Partnership (WRAP). It includes performing spatial analyses using ARC/GIS tools, preparing map displays using ARC/MAP and developing gridding surrogates based on O&G activities using ARC Macro Language (AML) scripts.

Development of Gridded Ocean-Going Vessel Emissions Inventories

- Prepared gridded Commercial Marine Vessel Emissions Inventory for EPA. Detailed US port emission inventory was spatially allocated into a gridded format. The port emissions were then blended with the STEEM data, which together create the merged, gridded commercial marine vessel emissions inventory. ARC/GIS buffer tool was used to define various distance regions (25, 50, 100, and 200 nautical miles) from the US shore line.

Development of California Emission Estimator Model (CalEEMod)

- Assisted in the development of CalEEMod - a statewide land use emissions computer model designed to provide a uniform platform to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operational from a variety of land use projects.

Rosebud Mine, Montana EIS

- Emissions modeling Task Manager to develop regional and project-specific emissions inputs for photochemical modeling study to assess direct effects due to the Rosebud mine and indirect effects due to the nearby power plant under NEPA.

BLM Oklahoma-Kansas-Texas (OKT) EIS and Resource Management Plan

- Managed emissions modeling task of the BLM Oklahoma-Kansas-Texas (OKT) modeling study to assess the air quality impacts of oil and gas development and coal mines on federal and non-federal lands and other cumulative regional sources. Emissions of criteria air pollutants from predicted oil and gas development in the three-state area were developed for this study.

BLM Colorado Air Resource Management Modeling Study (CARMMS)

- Emissions Modeling Lead for the BLM CARMMS study that assess the air quality (AQ) and air quality related value (AQRV) impacts of new federal oil and gas and other cumulative sources including non-federal O&G, mining and other regional emissions in each of the BLM Colorado Field Office planning areas, as well as the Mancos Shale area in northwest New Mexico. Air quality modeling emissions inputs were developed for high, medium and low O&G development scenarios for future years 2021 and 2025.

BLM Montana/Dakotas PGM Modeling Study

- Task Manager for developing air quality modeling emissions for the BLM Montana/Dakotas PGM modeling study to assess the AQ and AQRV impacts due to oil and gas development. The Bakken Shale formation in the Montana/Dakotas region is the most rapidly growing oil and gas development area in the U.S. Under this study, Ramboll Environ is developing a comprehensive oil and gas emissions inventory and performing base year 2012/2013 and future year 2032 modeling using the CAMx photochemical grid model.

Navajo Generating Stations (NGS) EIS Assessment

- Task Manager for developing criteria and HAP emission inventory for NGS for lease extension EIS. This was the most comprehensive and complete AQ, ecological and human health assessment ever performed for an EIS.

SMOKE-MOVES Processing for Denver Ozone Modeling

- Developed an approach to use link-based data from TDM models as input to SMOKE-MOVES processing tool. Processed detailed vehicular activity data to prepare model-ready emissions for onroad sources. The pre-gridded activity data was input to the tool for the on-network processing and treated each grid cell and speed class as a pseudo-county. The off-network emissions were spatially allocated using surrogates developed from trip starts (start exhaust) and trip ends (for evaporative processes) by Traffic Analysis Zone (TAZ). This approach takes advantage of detailed link-based spatial and temporal varying activity data available from the TDM model and the robust emissions calculation methodology of SMOKE-MOVES that takes into account temporal and spatial variations in meteorology and has EPA approval and support.

Air Quality Assessments in Alberta, Canada

- Performed emissions modeling of regional emission inventories for North East Alberta modeling studies and North Saskatchewan Region of Alberta.

MARCO A. RODRIGUEZ, PHD

Senior Consultant

Dr. Marco Antonio Rodriguez is a Senior Consultant and recognized expert with 18 years of experience using analytical techniques to solve complex air quality problems. Marco has worked on issues including oil and gas development and Better-than-BART assessments and has provided modeling advice to legal firms in cases involving litigation. He is intimately familiar with CAMx and CMAQ, and has evaluated modeling datasets using R, FORTRAN and Python. He is passionate about applying data science techniques to environmental and air quality issues.

CAREER

2018

Senior Consultant

Ramboll (formerly Ramboll Environ)

2012-2018

Air Quality Scientist, Project Manager

AECOM, Fort Collins, Colorado

- managed photochemical grid modeling projects, including evaluation, application and data analysis
- provided air quality support for impact assessments involving the National Environmental Policy Act (NEPA), oil and gas projects, winter ozone modeling, and regional haze assessment of coal-fired power plants.

2005–2012

Research Scientist, Air Quality Modeler

Cooperative Institute for Research in the Atmosphere, Fort Collins, Colorado

- provided data preparation, model setup and analysis of CAMx modeling for various environmental assessment projects funded by the national park service (NPS).
- performed nitrogen deposition modeling for NPS.
- evaluated air quality impacts from oil and gas on class I areas.
- acted as linux system administrator

2004–2005

Postgraduate Researcher

Advanced Power and Energy Program, University of California, Irvine

EXPERIENCE (PRIOR TO RAMBOLL)

- **Wyoming Department of Environmental Quality, Wyoming Photochemical Grid.** Assistant project manager and air quality modeler lead for a project studying winter ozone formation in the Upper Green River Basin (UGRB). Elevated levels of ozone have been measured during winter in the UGRB since 2005. Ongoing studies have led scientists to believe that oil and gas development activities combined with specific meteorological conditions are contributing to elevated levels of ozone in winter. The study evaluated the results of two photochemical grid models to determine if the models can reproduce ozone events with sufficient accuracy to be used as a tool for regulatory planning purposes. Drafted all analysis documents and reports.
- **Arizona Public Service Company, Four Corners Power Plant NEPA Services.** Assistant task manager of the ozone modeling effort for a project to retrofit the power plant with emissions controls. Responsibilities included study design and planning efforts, coordinating with the proponent and interagency review team, senior oversight of emissions inventory development, task management, oversight of photochemical modeling, and authoring sections of the air quality technical support document.
- **US Bureau of Land Management - Utah State Office, Air Resource Management Strategy Modeling.** Senior photochemical modeler and data analyst for a regional cumulative air impact assessment. The study was conducted to provide a reusable modeling platform for BLM air management decisions and future NEPA analyses in the Uinta Basin. An evaluation of two photochemical grid models was conducted and the better performing model (CMAQ) was selected for analysis of future year air quality conditions, including winter ozone.
- **Environmental Impact Statement, Casper, Wyoming.** Senior photochemical grid modeler for a programmatic oil and gas development EIS project for an area that covers approximately 1.5 million acres. The proposed development would involve drilling 5,000 new wells on 1,500 new well pads producing from multiple horizons, plus an additional 450 pads for supporting ancillary facilities. The EIS is being developed under the direction of the BLM Casper Field Office as the lead agency. Major issues include air quality (potential ozone impacts); flaring and associated noise; water supply/disposal and water quality; wildlife (impacts to sage grouse); range (impacts to grazing allotments); and transportation impacts associated with increased truck traffic. In addition to numerous cooperating agencies, a key co-operator is the US Forest Service, the federal agency responsible for management of the Thunder Basin National Grasslands that comprise approximately 4% of the surface ownership in the project area
- **Cooperative Institute for Research in the Atmosphere, Rocky Mountain Sulfur and Nitrogen Study, Colorado.** Lead photochemical air quality modeler for the RoMANS project. Responsible for preparation of input datasets required for running CAMx and model performance evaluation with available observations. Excess wet and dry deposition of nitrogen-containing compounds is a concern at a number of national parks. Rocky Mountain National Park provides a

well-documented example of the role of excess nitrogen deposition in sensitive alpine environments. The RoMANS was conducted during the spring and summer of 2006 to identify the overall mix of ambient and deposited sulfur and nitrogen in the park. The Comprehensive Air Quality Model with extensions (CAMx) was used to simulate the fate of gaseous and particulate species subjected to multiple chemical and physical processes during RoMANS. The work presents an operational evaluation with special emphasis on the model performance of reduced nitrogen species. Results showed that there were large negative biases and errors at RMNP and the entire domain for ammonia; therefore, the model was deemed inadequate for source apportionment applications. The CAMx Integrated Processes Rate (IPR) analysis tool was used here to investigate the reasons behind poor model performance. In particular, IPR served as a tool to diagnose the relative contributions of individual physical and chemical processes to the final concentrations of reduced nitrogen species. Finally, guided by the information provided by the process analysis results, a series of sensitivity simulations were performed to investigate the effects of different deposition velocities in the modeled concentrations.

- **Cooperative Institute for Research in the Atmosphere, Oil and Gas Development on Ozone Formation Regional Impacts.** Lead photochemical air quality modeler and performed evaluation of regional impacts of oil and gas development using the Phase I WRAP emissions inventory. The Intermountain West is currently experiencing increased growth in oil and gas production, which has the potential to affect the visibility and air quality of various Class I areas in the region. The project presented an analysis of these impacts using the Comprehensive Air Quality Model with extensions (CAMx). Meteorology and emissions inventories developed by the Western Regional Air Partnership Regional Modeling Center for regional haze analysis and planning were used to establish an ozone baseline simulation for the year 2002. The predicted range of values for ozone in the national parks and other Class I areas in the western US was then evaluated with available observations from the Clean Air Status and Trends Network (CASTNET). The evaluation demonstrated the model's suitability for subsequent planning, sensitivity, and emissions control strategy modeling. An analysis of the model results was performed to investigate the regional impacts of oil and gas development on the ozone concentrations that affect the air quality of Class I areas.
- **California Energy Commission, Distributed Generation Air Quality Impacts.** Lead air quality modeler of a project funded by the California Air Resources Board to understand and analyze the air quality impacts in the South Coast Air Basin of California (SoCAB) caused by the implementation of distributed power generation (DG). Developed a methodology to investigate the spatial effects of placing DG in specific locations within the SoCAB. Distributed energy resources (DER) have the potential to supply a significant portion of increased power demands in California and the rest of the United States. DG is characterized by a dispersion of many stationary power generators throughout an urban air basin. As a result, DG may lead to increased pollutant emissions within an urban air basin, which could adversely affect air quality. The project developed a systematic approach based on land-use GIS data for characterizing the installation of DER in an urban air basin and simulated the potential air quality impacts using a state-of-the-art 3D computer model. Model sensitivity and model uncertainty analyses were developed in the project. The assessment of the air quality impacts associated with DER was made in the South Coast Air Basin (SoCAB) for the year 2010. Results suggest that DER characterization could be systematically applied to urban air basins, and that realistic DER implementation in SoCAB by the year 2010 only slightly affected concentrations of ozone and particulate matter in the basin. However, DG may increase localized exposure to pollutants, and higher levels of DG penetration in years beyond 2010 may lead to more significant air quality impacts than those presented in this study.

CHAO-JUNG CHIEN, PHD

Senior Consultant

Dr. Chien is an Atmospheric Scientist with over 18 years of experience in the air quality field. Dr. Chien is an expert in atmospheric chemistry and has comprehensive knowledge of primary and secondary air pollutants formation and their chemistry and transport in complex 3-dimensional urban and regional air quality models. He has performed photochemical grid models (PGMs) such as CMAQ and CAMx, and has extensive experience in processing/evaluating/validating input and output data for all components of air quality modeling studies, including meteorology, e.g. WRF, emissions, e.g. SMOKE, MOVES, MEGANS, etc., and pre-processors of each respective model. He has developed and implemented a model performance software package tool to create comprehensive statistical and graphical results to evaluate model performance.

CAREER

2018

Senior Consultant

Ramboll (formerly Ramboll Environ)

2009-2018

Senior Air Quality Scientist

AECOM, Fort Collins, Colorado

Technical lead on all aspects of emissions processing, photochemical grid modeling (CAMx and CMAQ) and dispersion modeling (AERMOD and CALPUFF) practices, and air quality data analysis:

- Actively participated in developing regional cumulative air quality impact assessment for various Environmental Impact Studies (EIS) related to Oil and Gas development projects located in states of Wyoming and Montana, under supervision of various state (Wyoming) and federal governments (BLM, EPA region 8). Challenges among these projects include studying elevated winter ozone formation due to oil and gas development activities combined with specific meteorological conditions, and areas with pending designation as an ozone non-attainment area.
- Responsibilities included developing spatially-allocated air resource emissions inventories (EIs), conducting PGMs with CMAQ and CAMx, performing model performance evaluation, and authoring sections of various Air Quality Technical Support Documents.
- Maintained and administrated Linux-based HPC clusters to provide computing services for various air quality modeling applications throughout the company.

RELEVANT PROJECT EXPERIENCE

- **Wyoming Department of Environmental Quality (WDEQ), Wyoming Photochemical Grid.** Team lead on performing CMAQ air quality modeling and model shootouts between CMAQ and CAMx for a project studying winter ozone formation in the Upper Green River Basin (UGRB). Elevated levels of ozone have been measured during winter in the UGRB since 2005. Ongoing studies have led scientists to believe that oil and gas development activities combined with specific meteorological conditions are contributing to elevated levels of ozone in winter. The study evaluated the results of two photochemical grid models, CMAQ and CAMx, to determine if the models can reproduce ozone events with sufficient accuracy to be used as a tool for regulatory planning purposes. Assisted and as a reviewer in all analysis documents and reports.
- **US Bureau of Land Management - Utah State Office, Air Resource Management Strategy Modeling.** Team lead on a project for developing a regional cumulative air impact assessment for Utah BLM. Responsibilities included preparing and providing a spatially-allocated Air Resource Emission Inventory (EI) and providing air quality modeling platform using either CMAQ or CAMx to meet the needs of the Utah State Office of BLM for future NEPA and resource management plans (RMP) actions.
- **California Air Resources Board (CARB). Advanced Data Analysis for the Central California Ozone Study (CCOS).** Assisted in developing methods to characterize emissions, meteorology and atmospheric processes affecting the production of ozone in central CA. Performed model predictions for indicator species to observations to validate model processes. Model Inter-comparison was also conducted for SAQM, CMAQ and CAMx with CB4 and SAPRC99.
- **Arizona Public Service Company (APS Co.), Four Corners Power Plant NEPA Services.** Team lead on emissions processing for an ozone modeling project conducted to assess the impacts associated with retrofitting the Four Corners Power Plant with emissions controls. Responsible for the emission inventory processing in SMOKE for the photochemical modeling, and authoring sections of the Air Quality Technical Support Document.
- **Bureau of Land Management (EOG Resources), LaBarge Platform Exploration and Development Project EIS, Wyoming.** Team lead on emissions developing and photochemical

chemical grid modeling for a medium in-fill oil and gas development project in Southwestern Wyoming. This project is anticipated to be particularly challenging due to the area's pending designation as an ozone non-attainment area. Current responsibilities include developing emissions inventory with SMOKE, conducting photochemical grid model with CAMx, analyzing model performance and authoring sections of the Air Quality Technical Support Document

- **Coordinating research Council (CRC). Accuracy of Regional Simulations of Background Ozone and Particulate Matter.** Co-lead in Investigating natural contribution to atmospheric ozone and PM formation. Improved and refined emissions from various natural sources of ozone precursors (such as biogenic, lightning NOx) and PMs, including both direct emissions of primary PM (such as sea salt and volcanautic activities) and emissions of gaseous species that undergo photochemical transformation or condensation to form secondary PM. Conducted annual CMAQ modeling to investigate the effects that natural sources and background concentrations have on the development of ozone and PM attainment emission control strategies.
- **Regional Modeling Center (RMC), WRAP.** Assisted in regional particulate matter, ozone and haze modeling using CMAQ and CAMx for the western (WRAP), central (CENRAP), southeast (VISTAS), and Midwest (MRPO) Regional Planning Organization (RPOs) for the development of Regional Haze State Implementation Plans (SIPs) and the regional component of fine particulate and 8-hour ozone SIPs. Designed and developed model performance evaluation software (UCR_MPE Tool) for data analysis and evaluation of modeling results. Activities include obtaining ambient measurement data from various national ambient monitoring networks, assess the quality and usefulness of these data, and develop procedures of applying these data to validate air quality models.
- **UC-Riverside. Evaluation of Observation Based Methods (OBM) for Assessing the Sensitivity of Ozone to VOC and NOx.** Performed analysis on experimental results from state-of-art smog chamber experiments to determine whether observation based methods (OBMs) can be used reliably to distinguish conditions in which either VOC or NOx controls are more effective for reducing ambient ozone concentrations. More than 40 chamber experiments were carried out and 90 sets of data were accumulated. Key indicator species including H₂O₂, HNO₃, HCHO, NO₂, OH and HO₂ were also analyzed and compared with computer model simulations using SAPRC-99 photochemical mechanism.

SONJA SAX

Managing Consultant

Dr. Sonja Sax is an environmental health scientist with over 20 years of exposure and health risk assessment experience. Dr. Sax has particular expertise in assessing exposures and risks from airborne gases and particles, and has performed indoor and outdoor air quality investigations, managed several large environmental projects, conducted critical evaluations of toxicology and epidemiology studies, and helped prepare technical and expert reports. Dr. Sax has authored and co-authored several publications, presented her research and consulting work at various conferences and testified before scientific panels. Dr. Sax earned an MS and doctorate in environmental health from the Harvard T.H. Chan School of Public Health, where she also served as a postdoctoral fellow.

CAREER

2016->>>

Managing Consultant, Ramboll

Senior manager in charge of multiple exposure and health effects projects. Specific tasks include litigation support for toxic torts, conduct systematic reviews of the health effects literature for a number of chemicals, including bitumen fumes, welding fumes, diesel particulate, and carbon black, and critically review epidemiological and toxicological literature.

2005-2015

Senior Project Manager, Gradient

Managed and worked on multiple projects related to evaluation of human exposures and health risks associated with environmental pollutants; routinely conducted air dispersion modeling and exposure assessments to support health risk assessments; reviewed and interpreted epidemiology and toxicology studies for use in preparing expert reports, peer-reviewed publications, regulatory comments, and risk communications.

2003-2005

Postdoctoral Fellow, Harvard School of Public Health

Managed two large exposure assessment projects, developed study protocols, organized field studies, and managed staff. Additional duties included writing grants, analyzing data, and publishing manuscripts in peer-reviewed journals.

Ramboll
28 Amity Street
Suite 2A
Amherst, MA 01002
United States of America

1998-2003

Research/Teaching Assistant, Harvard School of Public Health

Designed, conducted, and managed a large air pollution exposure assessment study of inner-city teenagers in New York City and Los Angeles; measured and analyzed indoor, outdoor, and personal concentrations of volatile organic compounds (VOCs), carbonyls, PM2.5, and particle-associated metals. Teaching assistant for an introductory environmental health course.

1995

Intern, Environmental Protection Agency

Analyzed health effects data to assess the impact of ozone concentrations on hospital admissions in Massachusetts.

1994-1997

Research Assistant, Harvard School of Public Health

Proposed, designed, and implemented an indoor air quality study of a green community of homes.

1991-1994

Research Associate, Repligen Corporation

Managed the peptide chemistry lab. Conducted research to improve the synthesis of peptides. Trained and supervised laboratory staff.

EDUCATION

2003

COURSES/CERTIFICATIONS

Winner of the HERA Human Risk Assessment Paper of the Year Award, 2008

Probabilistic Analysis of Human Health Risks Associated with Background Concentrations of Inorganic Arsenic: Use of a Margin of Exposure Approach. Human and Ecological Risk Assessment 14:1159-1201.

LANGUAGE SKILLS

Spanish (mother tongue), **English** (mother tongue)

PROJECTS

Cost-benefit Analyses

Conducted cost-benefit analyses of air pollution reductions in the US and Middle East using the US Environmental Protection Agency Benefits Mapping and Analysis (BenMAP) Program.

Litigation Support

Contributed to the preparation of expert reports in litigation projects that involved a variety of different chemical exposures including volatile organic compounds (e.g., vinyl chloride and formaldehyde), asbestos, carbon black, particulate matter, sulfur dioxide, pesticides, and odors.

Critical Reviews and Syntheses

Conducted an extensive literature search on the toxicity and health effects of several different chemical compounds including cobalt and cobalt alloys found in dental materials, diesel exhaust, carbon black, welding fumes, sulfur dioxide, and odors.

Systematic Reviews

Conducted weight-of-evidence evaluation of cardiovascular and respiratory effects from exposures to ozone, diesel particles, and carbon black. Results of the critical evaluation of toxicology, epidemiology, and mode-of-action studies were published in several peer-reviewed manuscripts.

Exposure and Risk Assessment

For numerous projects prepared technical analyses on exposures and potential health effects associated with various pollutants including volatile organic compounds, asbestos, carbon black, particulate matter, sulfur dioxide, pesticides, and odor. Exposure assessments included air dispersion modeling or indoor air modeling.

Regulatory Support

Provided written and oral testimony on several occasions to the Clean Air Scientific Advisory Committee (CASAC) on human exposure, epidemiology, toxicology, and mechanistic studies and their bearing on US EPA's National Ambient Air Quality Standards (NAAQS) for particulate matter and ozone.

Indoor Exposure and Risk Assessment

Conducted exposure and risk assessments of residential exposures to various chemicals including formaldehyde from wood products, emissions of carbon black from industrial sources, vapor intrusion of tetrachloroethylene, exposures to mercury from wallboard and concrete, exposures to flame retardants from various indoor sources, and odor issues from a composting facility.

JEAN GUO

Consultant

Jean Guo, a Consultant at Ramboll, is experienced in air quality modeling, climate change assessment, and health impact analysis. She has conducted air quality modeling studies using models including GEOS-Chem, CAMx, CMAQ, and HYSPLIT, and used the results to evaluate the sources and impacts of air pollutants. She also has experience working with observations from surface monitors including the IMPROVE and EPA AQS networks. She has a strong background in atmospheric chemistry, particularly in ozone and particulate matter pollution. Jean is proficient at programming languages including MATLAB, Python, and Linux, and has extensive experience in ArcGIS, BenMAP, and data analysis and visualization.

SELECTED PROJECTS**Health Impact Analyses**

- Compared the health impacts of various electrification scenarios on human health and converted the impacts to dollar estimates.
- Ran health impact analyses to compare the health effects of criteria air pollutants under various developments as per the requirements of the California Environmental Quality Act (CEQA).
- Visualized the various health impacts of proposed projects on disadvantaged communities.

Climate Change

- Contributed to Environmental Impact Statements for various projects, analyzing the effect of the proposed project on the affected environment and climate.
- Analyzed the future projected impacts of natural hazards such as flooding, wild fires, extreme heat, and water stress on various properties.
- Prepared reports to guide property owners and buyers on the potential risks to their properties from future climate change.

Air Quality Modeling

- Modeled the impact of various pollutants on select regions and quantified the source contributions from different sectors.
- Tracked the source of pollution by activity sector and geographic location to determine the impact of each sector on specific regions.
- Determined the source contributions to criteria pollutants during days with bad air quality to determine the drivers of non-attainment days in various parts of the U.S.

TAYLOR A VENCILL

Senior Managing Consultant

Taylor Vencill is a Senior Managing Consultant in the Air Sciences Practice, currently located in the San Francisco, California office. Taylor's experience includes emissions estimation, air dispersion modeling, permitting, regulatory compliance, and greenhouse gas (GHG) emissions analyses and verifications. She has contributed to climate action plan development, climate change technical reports, environmental impact reports (EIRs), permit applications, health risk assessments (HRAs), and litigation support. Taylor's analytical skills include emissions inventories, air dispersion modeling, and data analysis using Microsoft Excel, Microsoft Access, and Geographic Information Systems (GIS). She has experience with a variety of emissions estimation and air dispersion modeling software including CalEEMod, EMFAC, OFFROAD, AERMOD, CAL3QHCR, and HARP. Taylor is a Registered Professional Engineer (Chemical) in California and a California Air Resources Board-Accredited GHG Lead Verifier with Specialty in Oil & Gas and Process Emissions (Executive Order H-18-159).

EDUCATION

MS, Civil and Environmental Engineering, Stanford University, 2014
BS, Chemical Engineering, Cornell University, 2009

EXPERIENCE HIGHLIGHTS

CEQA

- Contributed to and managed GHG, air quality, and energy analyses for various developments under the California Environmental Quality Act (CEQA).
- Prepared GHG, air quality, and energy technical reports in support of EIRs for various types of development.
- Developed inventories for all aspects of developments including construction, energy use of buildings, mobile sources, area sources, municipal sources and vegetation change.
- Used the California Emissions Estimator Model (CalEEMod), the Emission Factor Model (EMFAC), OFFROAD2007 and the In-Use Off-Road Equipment Model (2010 and 2011), and the Urban Emission Model (URBEMIS) to evaluate construction, area, and mobile emission inventories.

Climate Change

- For various projects, have evaluated and presented mitigation options and potential offsets, showing potential GHG reductions and related costs of implementation.
- Evaluated the significance of development emissions in relation to established thresholds.
- Led the development of baseline and future GHG inventories for the Port of San Diego in support of their climate action plan (CAP). Incorporated the effect of California regulations on future emissions.
 - Following the CAP development, helped evaluate the Port's progress towards meeting the CAP goals and assisted the Port in implementation efforts.
- Provided technical analyses for several GHG verifications under the California Air Resources Board (ARB) Mandatory Reporting Regulation. Verifications have included a poultry processing facility (general stationary combustion source), a transportation fuel supplier, an electricity importer, and an underground natural gas storage facility. Served as Lead Verifier on a set-aside verification from Reporting Year 2014 for an onshore petroleum and natural gas production facility.

Emissions Estimation

- Assisted with the development of emissions inventories for various industrial sites for litigation support, permit applications and permit compliance.
- Specifically assisted in preparing emissions inventories for complex industrial facilities in support of an initial Title V application as well as Title V Renewal applications.
- Managed development of a Facility-wide emissions inventory for a California refinery.
- Assisted in historical emissions estimations and emission source identification for litigation support. Included extensive review of historical documents.
- Assisted in development of emissions inventories for proposed modifications to industrial facilities.
 - Related permitting efforts included New Source Review (NSR), Prevention of Significant Deterioration (PSD) and Title V applicability analyses.
 - Used Hotspots Analysis and Reporting Program (HARP) to manage the facilities' emissions and assess the facilities' prioritization score.

Air Dispersion Modeling

- Conducted AERMOD, ISCST3, CAL3QHCR and SCREEN3 dispersion modeling for HRAs, permit applications and regulatory compliance.
- Performed the following tasks in relation to air dispersion modeling:
 - Meteorological data processing
 - Surface parameter analysis
 - Model and receptor setup using GIS tools
 - Post-processing of model results to analyze the magnitude and location of potential risks
- Performed reconciliation of air dispersion modeling and offsite monitoring results to determine source strengths of potential fugitive emission sources.
- Managed large-scale air dispersion modelling for traffic and maritime impacts (city-wide scale), to determine PM_{2.5} and health risk impacts.

Specialized Modeling

- Used Automated Data Inquiry for Oil Spills (ADIOS2) in support of litigation.

Regulatory Compliance

- Assisted a Class I Hazardous Waste Treatment, Storage, and Disposal Facility (TSDF) with air permit compliance, including an ambient air monitoring program (AAMP) and annual health risk evaluation (HRE).
- Conducted performance audits to evaluate the organic and inorganic sampling procedures, on-site meteorological station, spike test analyses and calibration procedures.
- Conducted onsite compliance assistance for a biotechnology company, including tracking for continual air permit compliance and the development of related tools to assist in the tracking efforts.
- Assisted industrial clients with their annual Toxics Release Inventory (TRI) reporting requirements, including applicability determinations and release quantifications.
- Assisted various clients with the ARB In-Use Off-Road Diesel-Fueled Fleets Regulation and LSI Fleet Requirements Regulation, including navigation through the regulations, evaluation of current and future fleet compliance to assist in purchasing and retrofit decisions, and assistance with the Diesel Off-Road Online Reporting System (DOORS).
 - Attended four related ARB training classes: Course #504 – In-Use Off-Road Diesel Vehicle Regulation Training, Course #505 – Large Spark-Ignition Fleet Regulation, Course #520 – How to Comply with CARB Diesel Regulations, Course #521.8 – Diesel Truck Regulation Compliance Course
- Project manager for the preparation of an Air Toxics Hot Spots Information and Assessment Act (AB 2588) HRA for an industrial client, using HARP to assess potential inhalation and multipathway health risk impacts.
- Assisted an industrial facility with evaluation of impact areas and preparation of warnings under Proposition 65.

Prior to joining Ramboll, Taylor held the following positions:

- Intern, Rhodia Inc, Martinez, California
 - Used Ultrapipe software to analyze pipe measurements for effects of corrosion, oversaw several maintenance routines while shadowing a process engineer, and was present for the two-week plant shutdown when various inspections took place.
- Intern, ENVIRON, Emeryville, California
 - Assisted in preparing a Title V Renewal Application, developing carbon footprint analyses and emission inventories, and preparing technical memos, inventory management plans, and technical reports.

B.5 Friant Ranch Interim Recommendation

Background

The California Supreme Court in the case of *Sierra Club v. County of Fresno* (2018) 6 Cal. 5th 502 regarding the proposed Friant Ranch project determined the air quality analysis in the environmental impact report (EIR) was inadequate because it did not make “a reasonable effort to substantively connect the project’s air quality impacts to likely health consequences.” The Court determined that “the EIR should be revised to relate the expected adverse air quality impacts to likely health consequences or explain in meaningful detail why it is not feasible at the time of drafting to provide such an analysis.”

Need

Lead agencies and practitioners preparing documents to comply with the California Environmental Quality Act (CEQA) have requested guidance from the Sacramento Metropolitan Air Quality Management District (Sac Metro Air District) on implementing the Friant Ranch decision in the review and analysis of proposed projects in Sacramento County.

Interim Recommendation

The Sac Metro Air District does not currently have a methodology that would correlate the expected air quality emissions of projects to the likely health consequences of the increased emissions. The Sac Metro Air District is in the process of developing a methodology to assess these impacts, and anticipates releasing it in the fall of 2019. In the interim, agencies should follow the Friant Court’s advice to explain in meaningful detail why this analysis is not yet feasible.

This explanation should describe the background underlying air regulations, the regional nature of the regulatory approach, and why the approach is not amenable to project level assessments. This should include a discussion of the public health impact analyses that form the basis for the state and federal health-based pollutant concentration standards, and the application of the standards to regions that were established based upon a commonality of factors impacting air quality. Air districts, in turn, have focused on reducing regional emissions from all sectors to meet the health-based concentration standards, thereby reducing the pollutant specific health impacts for the entire population. For example, the Sac Metro Air District prepared plans to attain and maintain the ozone and particulate matter ambient air quality standards. These attainment plans include emissions inventories, air monitoring data, control measures, modeling, future pollutant-level estimates, and general health information. Attainment planning models rely on regional inputs to determine ozone and particulate matter formation and concentrations in a regional context, not a project specific context. Because of the complexity of ozone formation, the pounds or tons of emissions from a proposed project in a specific geographical location does not equate to a specific concentration of ozone formation in a given area, because in addition to emission levels, ozone formation is affected by atmospheric chemistry, geography, and weather. Secondary formation of particulate matter is very similar to the complexity of ozone formation, and localized impacts of directly emitted particulate matter do not always equate to local particulate matter concentrations due to transport of emissions. The analysis should explain that because air district attainment plans and supporting air model tools are regional in nature, they do not allow for analysis of the health impacts of specific projects on any given geographic location. More information is included in the threshold justification documents developed by the Sac Metro Air District, and available at our website at www.airquality.org.

The analysis should also discuss the current models¹ used in CEQA in air quality analyses, which, in contrast to attainment models, are designed to calculate and disclose the mass emissions expected from the construction and operation of a proposed project (pounds/day and tons/year). The estimated emissions are then compared to significance thresholds, which are in turn keyed to reducing emissions to levels that will not interfere with the region’s ability to attain the health-based standards. The Sac Metro Air District adopted operational emission thresholds for ozone precursors, nitrogen oxides (NOx) and reactive organic gasses (ROG), with the goal of obtaining 0.45 tons/year of NOx and 0.49 tons/year of ROG reductions from new

development projects exceeding the thresholds by including emission reducing design features as mitigation.ⁱⁱ More recently, the Sac Metro Air District adopted particulate matter thresholds, PM10 and PM2.5, to align with the new source review permit offset levels, which are designed to prevent new emission sources from affecting attainment progress.ⁱⁱⁱ Sac Metro Air District thresholds are set at 65 pounds/day NOx (11.8 tons/year), 65 pounds/day ROG (11.8 tons/year), 80 pounds/day PM10 (14.6 tons/year), and 82 pounds/day PM2.5 (15 tons/year).^{iv} CEQA thresholds are a tool Sac Metro Air District uses to obtain emission reductions from development projects to support attainment of the Federal and State ambient air quality standards. This protects public health in the overall region, but there is currently no methodology to determine the impact of emissions on concentration levels in specific geographic areas.

The CEQA analysis should consider the degree to which various other tools, such as CalEEMod, EMFAC, OFFROAD, AERMOD, and HARP and CAMx, could assist in assessing specific health impacts of a project, and, where those tools would not be useful, explain why. For example, while CalEEMod may be useful in comparing emissions to significance thresholds, it is not able to assess transport of pollutants or the impacts of external factors (weather, terrain, etc.) on pollutant concentrations at particular locations.

In Sacramento, concentration modeling of ozone has not been an analytical tool used for project level emissions due to the complex nature of pollution concentration formation and numerous regional influences (multiple emission sources, meteorology, atmospheric chemistry and geography). Although some particulate matter concentration modeling has been conducted for project specific emissions for stationary source permitting purposes, concentration modeling has mainly been used to support ozone attainment demonstration.

Outside of these tools, neither the Sac Metro Air District nor any other air district currently have methodologies that would provide Lead Agencies and CEQA practitioners with a consistent, reliable, and meaningful analysis to correlate specific health impacts that may result from a proposed project's mass emissions.

An expanded discussion of health impacts resulting from specific air pollutants may also be warranted for projects with emissions exceeding the Sac Metro Air District's thresholds of significance. There is an array of information on health impacts related to exposure to ozone^v and particulate matter^{vi} emissions published by the US EPA and the California Air Resources Board. Health studies are used by these agencies to set the Federal and State ambient air quality standards. A more general discussion of health impacts related to air pollution is also available on www.sparetheair.com and in the Sac Metro Air District's *Guide to Air Quality Assessment in Sacramento County*.^{vii} None of the health-related information can be directly correlated to the pounds/day or tons/year of emissions estimated from a single, proposed project.

Developing Guidance

The interim recommendation is in place to assist lead agencies and practitioners with CEQA document preparation until Sac Metro Air District develops a methodology that provides a consistent, reliable and meaningful analysis to address the Court's direction on correlating health impacts to a project's emissions.

Sac Metro Air District staff have initiated discussions with the other air district's in the Sacramento Federal Ozone Nonattainment area regarding developing guidance in response to Friant Ranch since we share air quality issues and use the same growth assumptions, mobile source emissions, and modeling efforts to support our ozone and particulate matter attainment plans.

One potentially useful tool in developing a methodology is the US EPA's BenMap tool^{viii}. According to US EPA's website, BenMap is an "open-source computer program that calculates the number and economic value of air pollution-related deaths and illnesses. The software incorporates a database that includes many of the concentration-response relationships, population files, and health and economic data needed to quantify these impacts." BenMap may be able to provide the detailed health information needed for the guidance under development.

Sac Metro Air District is working with its engineering and environmental technical support consultant, Ramboll USA Corporation, to develop a methodology that will provide a consistent, reliable, efficient, and meaningful analysis that correlates health impacts from proposed projects' emissions for the Sacramento region. The current strategy will analyze how various levels of emissions (the CEQA tonnage estimates) impact attainment pollutant concentration levels, and use BenMap to correlate increases in concentration levels to health impacts. Once a methodology is available, Sac Metro Air District staff will inform interested stakeholders and provide updated guidance in this document and in its *Guide to Air Quality Assessment in Sacramento County*.

Contact Information

Lead agencies and CEQA practitioners may contact Mr. Paul Philley, CEQA and Land Use Section Program Supervisor at 916-874-4882 or pphilley@airquality.org regarding Sac Metro Air District's recommendations.

C.1 Vernal Pool Branchiopods Study

November 20, 2012

6987-01

Recovery Permit Coordinator
U. S. Fish and Wildlife Service
6010 Hidden Valley Road
Carlsbad, California 92008

Subject: Results of Focused Dry Season Presence/Absence Survey for Vernal Pool Branchiopods on the California State University, Dominguez Hills Campus, Los Angeles County, California

Dear Recovery Permit Coordinator:

A dry season presence/absence survey for vernal pool branchiopods was conducted on the California State University, Dominguez Hills Campus, located within the urbanized City of Carson, Los Angeles, California. The soil collection for the survey and evaluation of cysts was conducted by biologist Brock A. Ortega (permit number TE-813545) on October 21, 2011. The survey focused on the determination of the presence/absence of two federally-listed endangered vernal pool branchiopod species: Riverside fairy shrimp (*Streptocephalus woottoni*) and San Diego fairy shrimp (*Branchinecta sandiegonensis*) according to the April 19, 1996 *Interim Survey Guidelines to Permittees for Recovery Permits* under Section 10(a)(1)(A) of the Endangered Species Act for the Listed Vernal Pool Branchiopods (USFWS 1996). The survey consisted of the dry season sampling survey of one vernal pool and attempt at a wet season survey. Branchiopod cysts were detected in the pool.

Project Location and Existing Conditions

The investigation was performed on a portion of the California State University, Dominguez Hills (CSUDH) campus located in Los Angeles County, California (*Figure 1*). The approximately 343-acre CSUDH campus is located east of Alameda Street, west of Highway 710, north of Highway 405, and south of Highway 91. The campus can be found on the U.S. Geological Survey (USGS) 7.5-minute Torrance, California quadrangle map, in Section 32, T. 3 S., R. 13 W. The CSUDH Facilities Planning and Construction Management Division is in the process of determining how to proceed with an infill portion (*study area*) of the campus between Lot 3 and Lot 6, east of the existing Extended Education building (*Figure 2*). An approximately 50-foot by 50-foot man-made depression occurs within the 0.59-acre study area that periodically retains surface water during higher-than-normal rainfall years. The Universal Transverse Mercator coordinates corresponding to the approximate center of the study area are 383,618.82mE and 3,747,936.74mN.

Recovery Permit Coordinator

Subject: Results of Focused Dry Season Presence/Absence Survey for Vernal Pool Branchiopods on the California State University, Dominguez Hills Campus, Los Angeles County, California

Currently the study area exists in a disturbed condition as a result of previous grading and stockpiling activities associated with campus improvements and the adjacent Home Depot Center projects. The study area is characterized as a disturbed community dominated by ruderal vegetation. Land surrounding the ruderal area is either devoid of vegetation or developed. A majority of the study area occurs within a slight topographic depression. Local storm flow from the adjacent campus is transported under Toro Center Drive via a concrete culvert and continues in a westerly direction to the study area. Soil material has been placed on either side of the small storm drain to the north and south. As a result, the seasonal storm flow appears as a well-defined channel.

Elevations range from approximately 90 feet above mean sea level (AMSL) in the eastern channel inlet to 85 feet AMSL in the center of the depression. The campus itself is situated within a densely urbanized setting.

Vernal Pool Description

The approximate 50-foot by 50-foot depressional area included soil cracking where visible through the moderate vegetative cover. Vegetation that covers the sides and bottom of the depression include red-stem filaree (*Erodium cicutarium*), knotweed (*Polygonum arenastrum*), crabgrass (*Digitaria sanguinalis*), English plantain (*Plantago lanceolata*), cheeseweed (*Malva parciflora*), mustard (*Brassica* sp.), pigweed (*Amaranthus* sp.), curly doc (*Rumex crispus*), nut sedge (*Cyperus* sp.), and willow-herb (*Epilobum* sp.), pine (*Pinus* sp.), and eucalyptus (*Eucalyptus* sp.). The depression itself (Figure 3) is roughly oval in shape and appears to be approximately 10 to 31 cm deep if it were capable of holding water for extended periods.

Previous Studies and Historical Context

Prior to 1960, the land where the depression occurs was purchased for development of the CSUDH campus. The study area at that time, did not retain water and were well drained. In 1969 the study area was part of a tree nursery (the likely origin of the pine trees and eucalyptus tree within the study area) and was rough graded. In 1972 campus development occurred adjacent to the study area and as a result, the current depression was created. Between 1982 and 2004 various improvements and construction activities occurred on and around the study area. In 2004, additional soils were deposited in the area as a result of soils imports for the X Games.

Recovery Permit Coordinator

Subject: Results of Focused Dry Season Presence/Absence Survey for Vernal Pool Branchiopods on the California State University, Dominguez Hills Campus, Los Angeles County, California

During the 2004/2005 wet season, there was above normal precipitation and the study area filled with water twice. During the first period, there was an unconfirmed identification of fairy shrimp within the depression. As a result, the school roped off the study area until more was known.

During the 2005/2006 wet season, an attempt was made to perform a protocol-level wet-season survey by PCR. Unfortunately, the depression did not fill with water so no survey could be performed. Later that year, PCR performed a protocol-level dry-season survey, identifying five *Branchinecta* cysts. These were hydrated, but did not grow after a two-month grow period. PCR made a request to the U.S. Fish and Wildlife Service (USFWS) to perform 2006/2007 surveys and to artificially hydrate the depression if conditions were not suitable, but never received authorization and the project was put on hold.

In January 2011, Dudek was requested to perform the same services in an attempt to finally identify the species of fairy shrimp which was present. Dudek attempted to perform a wet-season survey during the remainder of the 2010/2011 wet-season, but water never satisfied the pooling criteria for initiating wet-season surveys. Therefore Dudek collected dry-soil samples in late October 2011, and held them in dry storage until after the 2011/2012 wet-season (Notification letter sent on July 30, 2011). During the 2011/2012 wet-season, no pooling of water occurred that satisfied criteria and analysis of the soil samples commenced.

Methods

Dry season sampling for the vernal pool branchiopods was conducted on the project area on October 21, 2011 by Dudek biologist Brock Ortega (federal permit number TE-813545) and were analyzed for cysts, then hydrated from March through late August. One pool (Depression 1) was sampled within the CSUDH study area. The survey was conducted following the currently accepted protocol of the USFWS. Ten soil samples, approximately 100mL each, were collected from Depression 1. Soil samples were collected as intact clumps from the deepest portions of the depression. Samples were taken from locations scattered within the depression as indicated in Figure 3.

Each soil sample was placed in a zip-lock bag, labeled with the locality number, and held in dry-storage within an enclosed and climate-controlled closet until it was determined that analysis was necessary. Samples were identified according to the numbers assigned to them in the field, which were recorded on a base map (*Figure 3*).

Soil samples were prepared for examination in the laboratory by dissolving the clumps of soil in water and sequentially sieving the material through 500-, 300-, and 150-micron pore size bronze screens. The small size of these screens ensures that the eggs from the fairy shrimp species will

Recovery Permit Coordinator

Subject: Results of Focused Dry Season Presence/Absence Survey for Vernal Pool Branchiopods on the California State University, Dominguez Hills Campus, Los Angeles County, California

be retained. The portion of each sample retained in the screens was rinsed with a dissolved brine solution to separate the organic material from the inorganic material, and water was removed through filter paper by vacuum suction. The organic fraction was then examined under a 6.3-570x power Olympus SZX9 Zoom Stereo Microscope. If fairy shrimp cysts were observed, they were counted for each sample. In addition, the washed soil and organic material was retained.

Following cyst identification, all of the filter paper holdings from each screen size (500, 300, 150), for each sample (1 through 10), were placed into individual 48-ounce plastic containers for hydration. Each filter paper was submerged in deionized and dechlorinated water and monitored. Each sample was kept in a controlled climate lab with regularly cycled UV florescent lighting intended to mimic typical southern California winter lighting (i.e., approximately 10 hours per day).

The samples were maintained from mid-February through late April with no success. The samples were allowed to dry for a period of two weeks, then hydrated again and maintained until early July with no success. At that time it was decided to combine the dried material from the filter sheets, previously rinsed soil, organic debris, and the contents of two back-up soil samples which were collected during the initial October 2011 sampling. These were placed into a plastic tub in an outdoor facility, hydrated and left in place. Within two weeks, approximately 12 fairy shrimp had emerged. These were protected and allowed to grow and were finally analyzed once they had attained sexual maturity.

Photographs of the pools are provided in Figure 4. The Vernal Pool Data Sheet Dry Season Survey forms are included in Appendix A.

Results and Discussion

Of the 12 fairy shrimps that were eventually hydrated, ten reached sexual maturity and were identified as the non-sensitive versatile fairy shrimp (*Branchinecta lindahli*). No special-status shrimp were hydrated from any of the soil samples evaluated from the CSUDH depression.

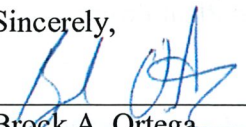

A final wet-season survey has not been conducted due to a lack of suitable conditions, but given the urban nature of the location, lack of historical pools, history of the site, manufactured depression, import of other soils, historically poor ponding characteristics, and dry-season identification of the non-listed versatile fairy shrimp, we believe that no further wet-season studies should be necessary.

1 INTRODUCTION

1.1 Scope

This report serves as a preliminary wetland delineation and assessment that summarizes existing hydrology, soil, and vegetative conditions for the California State University Dominguez Hills (CSUDH) Master Plan Update Project (project) in Carson, Los Angeles County, California (refer to Figures 1 and 2). This report was prepared at the request of WSP USA, and it is intended for use by CSUDH, and other regulatory agencies. The area studied (i.e., delineation area) for this report includes the drainages and retention basins located south of Pacific View Drive near the facilities services building, and adjacent to the Extended Education Center west of Toro Center Drive.

A formal jurisdictional delineation was conducted to delineate the extent of wetlands and waters of the United States, as defined by the United States Army Corps of Engineers (USACE), and waters of the State, as defined by the Regional Water Quality Control Board (RWQCB) and California Department of Fish and Wildlife (CDFW). Findings reported herein are based on information gathered during the field investigation and the investigator's understanding of the *U.S. Army Corps of Engineers Wetland Delineation Manual* (USACE 1987), the *Final Regional Supplement to the Corps of Engineers Wetland Delineation Manual Arid West Region (Version 2.0)* (USACE 2010), *A Field Guide to the Identification of the Ordinary High Water Mark in the Arid West Region of the Western United States* (USACE 2008a), and federal and state guidelines for identification of wetlands and water features. This report is subject to review by the affected agencies and should be submitted to USACE, RWQCB, and CDFW for verification during the permitting phase of the project.

1.2 Project Location

The project is located on the CSUDH campus within the city of Carson, Los Angeles County, California, approximately 0.6 to 1.0 mile south of California State Route 91 and approximately 1.5 to 2.0 miles east of Interstate 110 (Figure 1). The site is relatively flat and ranges from 57 to 115 feet above sea level over approximately 2,000 linear feet, draining in a general southwest direction. The project is divided into two separate locations on the campus: the northern site and the southern site. The northern site is located approximately 40 to 260 feet west of Toro Center Drive, in an open field with two mature Canary Island pines (*Pinus canariensis*) and paved parking lots to the north and south (Figures 2 and 3). The northern project site is located in Section 32, Township 3 South, Range 13 West. The center point decimal coordinates of the northern project site are 33.865248°, -118.258229°.

The southern site is located immediately north of East University Drive and west of Central Avenue, and is surrounded by a mosaic of open fields and developed lots (Figures 2 and 3). The southern project site is located in Section 33, Township 3 South, Range 13 West. The center point decimal coordinates of the southern project site are 33.859263°, -118.252274°.

1.3 Project Description

CSUDH is in the process of updating the campus Facilities Master Plan, a strategy for modifying the physical campus to accommodate the growth and changes the campus is expected to experience over the next fifteen to twenty years. The scope of the Master Plan embraces five specific areas of concern on the Core Campus: renewal of academic and administrative facilities; increasing housing for students, and providing housing opportunities for faculty and staff; expanding student life and campus life facilities; making functional modifications to the campus; and adjustments to campus infrastructure. In addition, the 2018 Master Plan addresses the development of the University Village on the east of the campus as a mixed-use development incorporating market-rate housing facilities, retail development, parking, open space areas and business park development.

Figure 2. Project Location Map

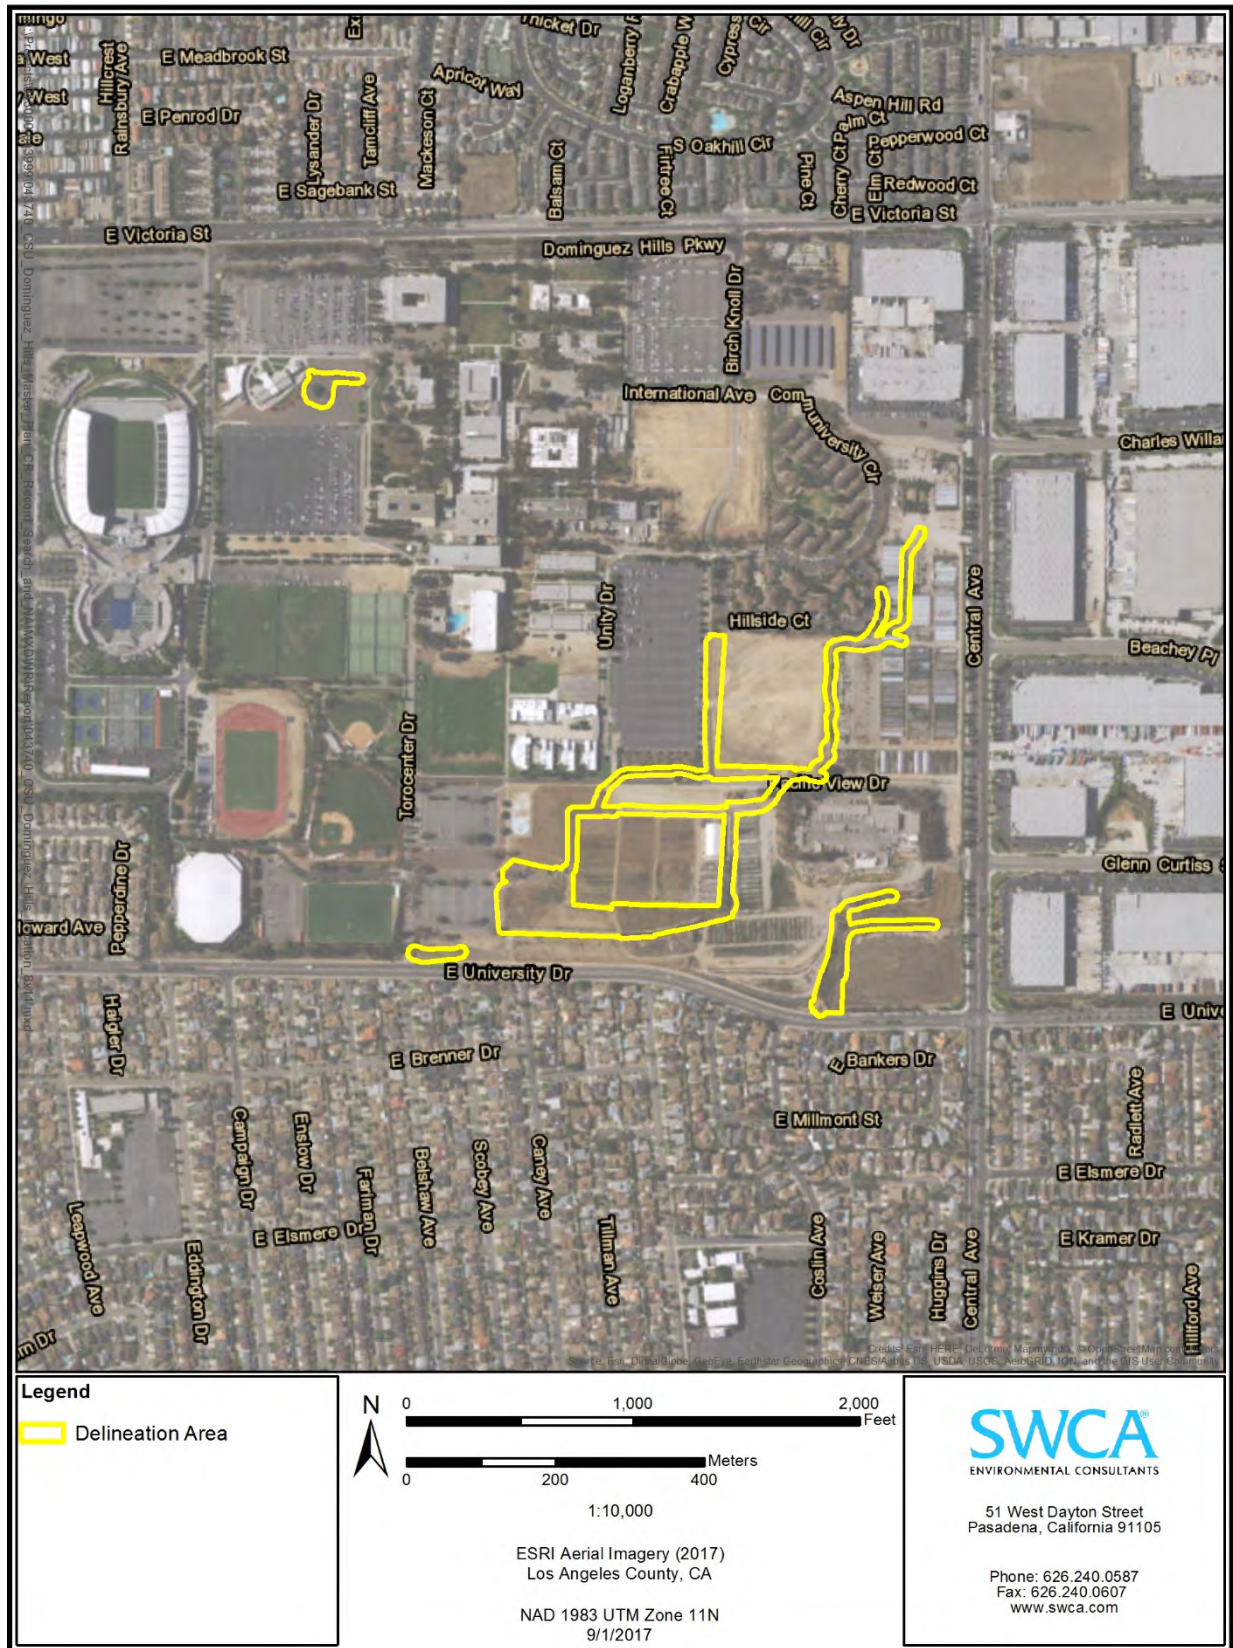

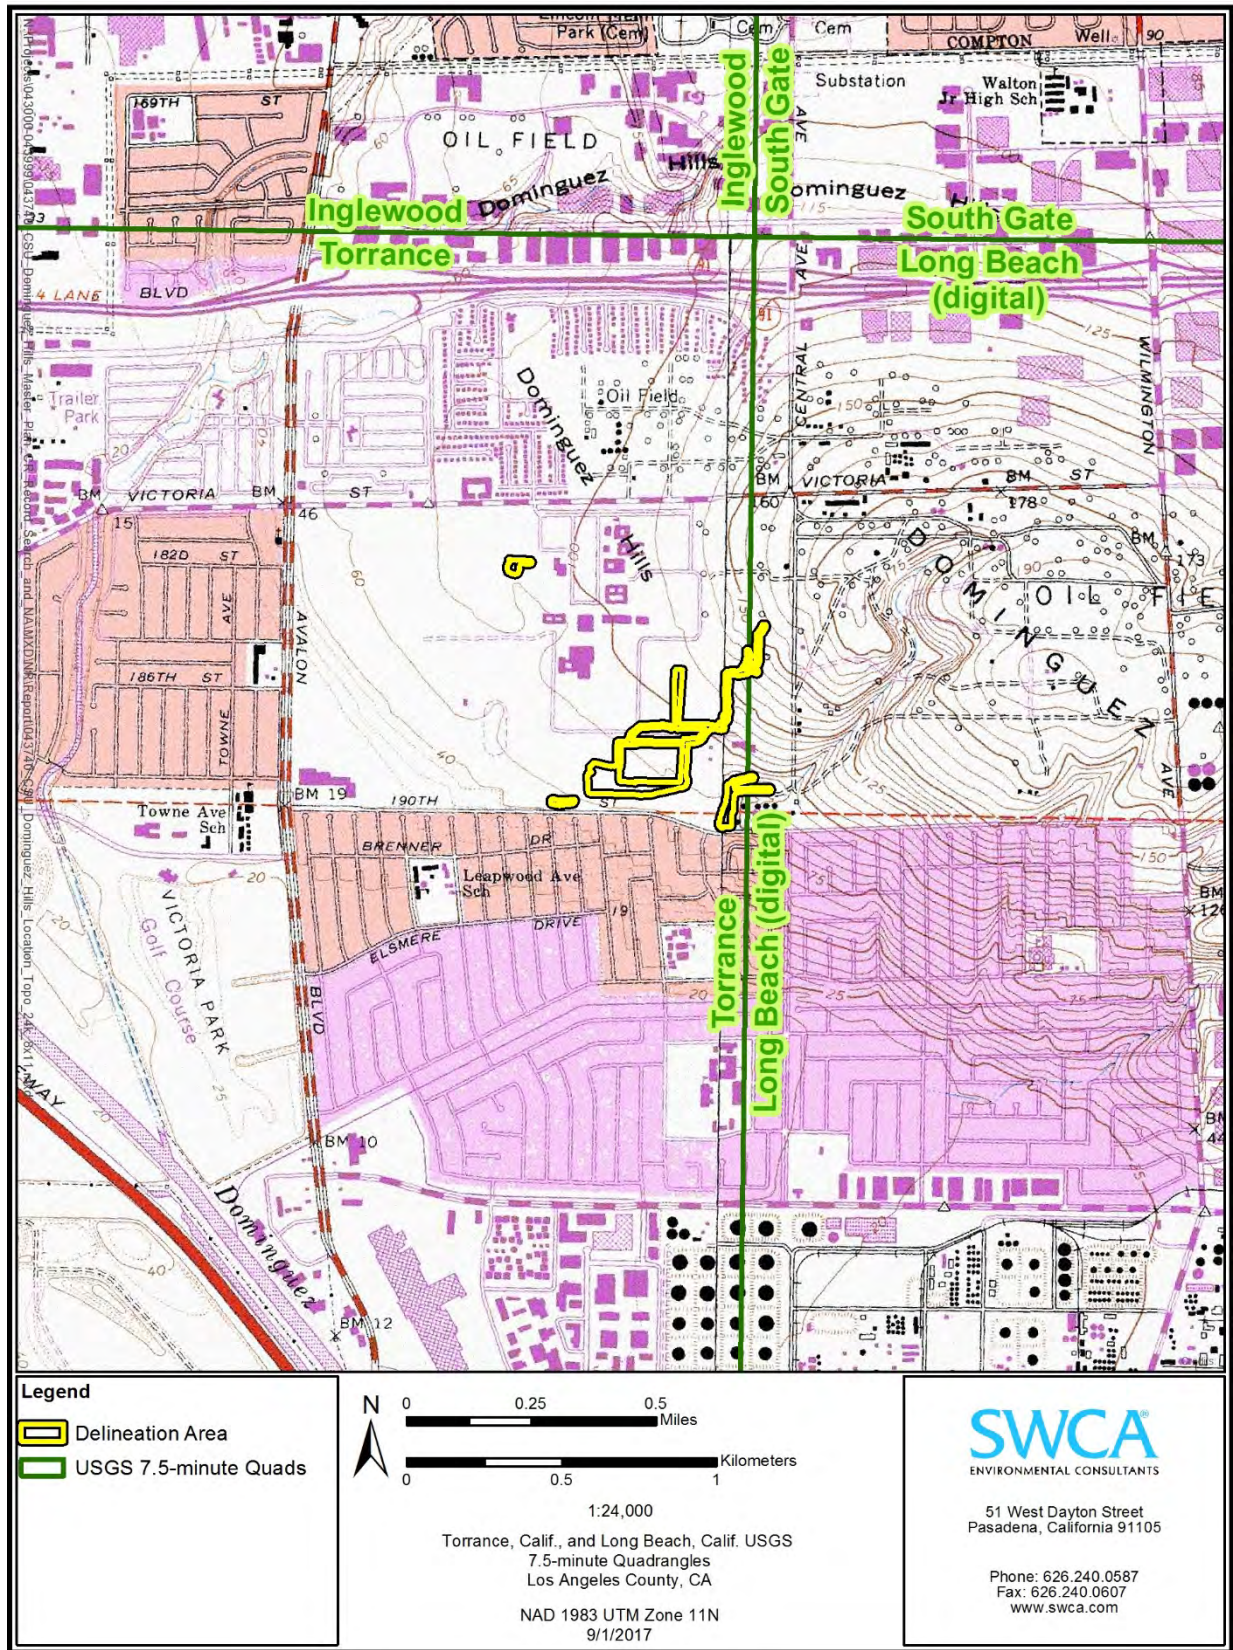

Figure 3. Project Topographic Map

2 REGULATORY BACKGROUND

2.1 U.S. Army Corps of Engineers, Section 404

USACE regulates discharges of dredged or fill material into waters of the United States. These waters include wetland and non-wetland water bodies that meet specific criteria. USACE regulatory jurisdiction, pursuant to Section 10 of the Rivers and Harbors Act of 1899 (33 United States Code [U.S.C.] 403), regulates almost all work in, over, and under waters listed as “navigable waters of the U.S.” that results in a discharge of dredged or fill material within USACE regulatory jurisdiction, pursuant to Section 404 of the Clean Water Act. Under Section 404, USACE regulates traditional navigable waters, wetlands adjacent to traditional navigable waters, relatively permanent non-navigable tributaries that have a continuous flow at least seasonally (typically 3 months), and wetlands that directly abut relatively permanent tributaries. USACE will determine jurisdiction over waters that are non-navigable tributaries, that are not relatively permanent and wetlands adjacent to non-navigable tributaries, and that are not relatively permanent only after making a significant nexus finding.

Code of Federal Regulations (CFR) Title 33, Section 328.3 defines waters of the United States as:

- (1) All waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce;
- (2) All interstate waters including interstate wetlands;
- (3) All other waters such as intrastate lakes, rivers, streams (including intermittent streams) the use, degradation or destruction of which could affect interstate or foreign commerce;
- (4) All impoundments of waters otherwise defined as waters of the United States under the definition;
- (5) Tributaries of waters defined in paragraphs (a)(1)–(4) of this section;
- (6) The territorial seas; and,
- (7) Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (a) (1)–(6) of this section.

USACE jurisdiction over nontidal waters of the United States extends laterally to the ordinary high water mark (OHWM) or beyond the OHWM to the limit of any adjacent wetlands, if present (33 CFR 328.4). The OHWM is defined in 33 CFR 328.3 as:

“that line on the shore established by the fluctuations of water and indicated by physical characteristics such as a clear natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas.”

2.2 Regional Water Quality Control Boards, Section 401

Nine RWQCBs regulate discharges of fill and dredged material in California under Section 401 of the Clean Water Act and the Porter-Cologne Water Quality Control Act. State Water Quality Certification is necessary for all projects that require a USACE permit, or fall under other federal jurisdiction, and have the potential to impact waters of the State. “Isolated” waters were determined by the U.S. Supreme Court under the Solid Waste Agency of Northern Cook County (SWANCC) decision to be non-jurisdictional under Section 404, and Section 404/401 permits and State Water Quality Certifications are not issued for projects determined by the USACE to contain only isolated waters.

Waters of the State are defined by the Porter-Cologne Act as:

“any surface water or groundwater, including saline waters, within the boundaries of the state.”

Discharges of dredged or fill material to waters of the State not subject to Clean Water Act Section 404 are regulated by RWQCB under Porter-Cologne Act Article 4, Individual or General Waste Discharge Requirement Permits (WDR). The WDR permit requirements ensure that the permitted activities comply with state water quality standards over the term of the action, and are consistent with the requirements of the California Environmental Quality Act, California Endangered Species Act, and Porter-Cologne Act. Permit requirements and costs under WDR regulations are similar to Section 401 procedures.

2.3 California Department of Fish and Wildlife

Pursuant to Division 2, Chapter 6, Sections 1600–1602 of the California Fish and Game Code, CDFW regulates all diversions, obstructions, or changes to the natural flow or bed, channel, or bank of any river, stream, or lake, which supports fish or wildlife. CDFW defines a “stream” (including creeks and rivers) as “a body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having surface or subsurface flow that supports or has supported riparian vegetation.” CDFW’s definition of “lake” includes “natural lakes or man-made reservoirs.” CDFW jurisdiction within altered or artificial waterways is based upon the value of those waterways to fish and wildlife. The CDFW Legal Advisor has prepared the following opinion:

- Natural waterways that have been subsequently modified and which have the potential to contain fish, aquatic insects, and riparian vegetation will be treated like natural waterways...
- Artificial waterways that have acquired the physical attributes of natural stream courses, and which have been viewed by the community as natural stream courses, should be treated as natural waterways...
- Artificial waterways without the attributes of natural waterways should generally not be subject to Fish and Game Code provisions.

In practice, CDFW usually extends its jurisdictional limit to the top-of-bank for a stream or a lake, plus outer edge of the riparian vegetation, whichever is wider. CDFW can be expected to take jurisdiction over all areas that have evidence of cut bank and channel, or evidence of historical flows, to the point where no confining feature is present.

3 METHODOLOGY

Wetland delineation efforts utilized the routine delineation methodology described in the *Corps of Engineers Wetlands Delineation Manual* (Environmental Laboratory 1987), and as supplemented in the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region (Version 2.0)* (USACE 2008b). The delineator also utilized *A Field Guide to the Identification of the Ordinary High Water Mark in the Arid West Region of the Western United States* (USACE 2008a). United States Fish and Wildlife Service (USFWS) National Wetland Inventory (NWI) maps and U.S. Geological Survey (USGS) *Torrance* and *Long Beach* quadrangle topographic maps were reviewed (USFWS 2017). The habitat and plant species descriptions follow *A Manual of California Vegetation* (Sawyer et al. 2009), *Preliminary Descriptions of the Terrestrial Natural Communities of California* (Holland 1986), *The Jepson Manual* (Baldwin et al. 2012), and the Arid West Regional Wetland Plant List (Lichvar et al. 2015). Soils data was obtained from the U.S. Department of Agriculture, Natural Resource Conservation Service (NRCS) Web Soil Survey (2017). Specific references not listed above are cited in text.

Delineation of waters in the delineation area were based on review of pertinent literature and a thorough on-site field investigation. Prior to beginning the field investigation, the USGS *Torrance* and *Long Beach* quadrangle maps and recent aerial photographs of the project site were examined to gain insight on the topography and waterways in the CSUDH campus and surrounding areas. These resources were also used as a reference to determine hydrologic connectivity to a navigable water body and/or relatively permanent waters.

Following the literature review, an on-site investigation was conducted on August 9, 2017, by biologist Matthew Schaap, to identify the extent of potentially jurisdictional wetlands and waters as defined by the USACE, RWQCB, and CDFW. Representative sampling plots were evaluated to determine the boundary between uplands and wetlands, and to ensure compliance with Arid West requirements. Seven sampling plots were examined in the delineation area (Appendix A) to observe and record soil characteristics, vegetation types, and hydrologic features. Soil matrix colors were classified according to the *Munsell Soil Color Charts* (Munsell Color 2000). Plant species identified at sample point locations were assigned a wetland status according to the Arid West 2014 regional Wetland Plant List (Lichvar 2015). *Wetland Determination Data Form – Arid West Region*, and *Arid West Ephemeral and Intermittent Streams OHWM Datasheets* were filled out as appropriate for all Project area features (Appendix B).

Observed water features were mapped using a Trimble GeoXH Geoplotter 2008 handheld GPS unit capable of sub-meter accuracy. A Wetland / Waters Delineation and Assessment Map showing the delineation area and sample plot locations is included in Appendix A, and Arid West data sheets are included in Appendix B. Photos of the existing conditions observed during the assessment are shown in Appendix C.

4 RESULTS

The northern site consists of a bare, open field that has been heavily altered from its natural state and is surrounded by development. The site contains a seasonally flooded wetland, classified as palustrine emergent temporarily flooded wetland (PEMA). The wetland feature delineation area begins at a culvert at Toro Center Drive, continues west through a narrow channelized swale, and eventually spreads out in an open area located east of the Extended Education Center (Appendix A). The wetland is not identified within the NWI internet-based Wetlands Mapper (Appendix D).

The southern site contains a series of ephemeral drainage features. The northwestern most drainage feature located along Birchknoll Road (Drainage 1) is an altered, ephemeral drainage that extends south from Parking Lot 5B on the east side of Birchknoll Road to Pacific View Drive to a culvert which enters into Heritage Creek Nature Preserve and flows to into culvert which connects to Drainage 2. Drainage 2 is an ephemeral altered drainage that extends from Pacific View Drive south through open fields to a manmade basin and culvert north of East University Drive. East of Drainage 2 is a large ephemeral drainage (Drainage 3) south of Pacific View Drive flowing southwest and south to a manmade basin and culvert north of East University Drive. South of the Physical Plant and Pacific View Drive is Drainage 4 which flows west and south to a culvert north of East University Drive.

4.1 Soils

The NRCS Web Soil Survey shows one soil type occurring in the delineation area (NRCS 2017) – Urban land-Typic Xerorthents, terraced-Windfetch complex, 2 to 9 percent slopes, MLRA 19 (Figure 4). This soil type is found at an elevation of 20 to 260 feet above sea level, includes fan remnants, and is a loam from discontinuous human-transported material over mixed alluvium. This soil is well drained, consists of loam from 0 down to 80 inches with some clay 16 to 37 inches, and is more than 80 inches from the water table. In general, this soil type has no flooding, and no frequency of ponding. The NRCS California Hydric Soils List does not include Urban land-Typic Xerorthents, terraced-Windfetch as a hydric soil.

4.2 Vegetation

Vegetation within the northern portion of the delineation area is largely absent. The area receives regular landscaping maintenance during which vegetation is removed. Plant species observed within the delineation area at the time of the survey were two Canary Island pines, eucalyptus (*Eucalyptus* sp.), widely spaced laurel sumac (*Malosma laurina*), cudweed (*Pseudognaphalium canescens*), and spike rush (*Eleocharis* sp.).

The dominant vegetation community present within the southern site is classified as *Brassica nigra* and other mustards Herbaceous Semi-Natural Alliance and is dominated by short pod mustard (*Hirschfeldia incana*), sunflower (*Helianthis annuus*), tree tobacco (*Nicotiana glauca*), and Russian thistle (*Salsola tragus*). Portions of the delineation area located along Birchknoll Road and Pacific View Drive are devoid of vegetation as a result of regular maintenance.

4.3 Hydrology

The northern site is generally concave and appears to have historically supported a seasonally flooded wetland, yet has been altered and is now seasonally functioning as a wetland. The southern site is comprised of open fields where storm water runoff has been channelized into manmade ephemeral drainages. These drainage features flow into manmade basins and storm drains which have hydrological connectivity to the Dominguez Channel and the Los Angeles River.

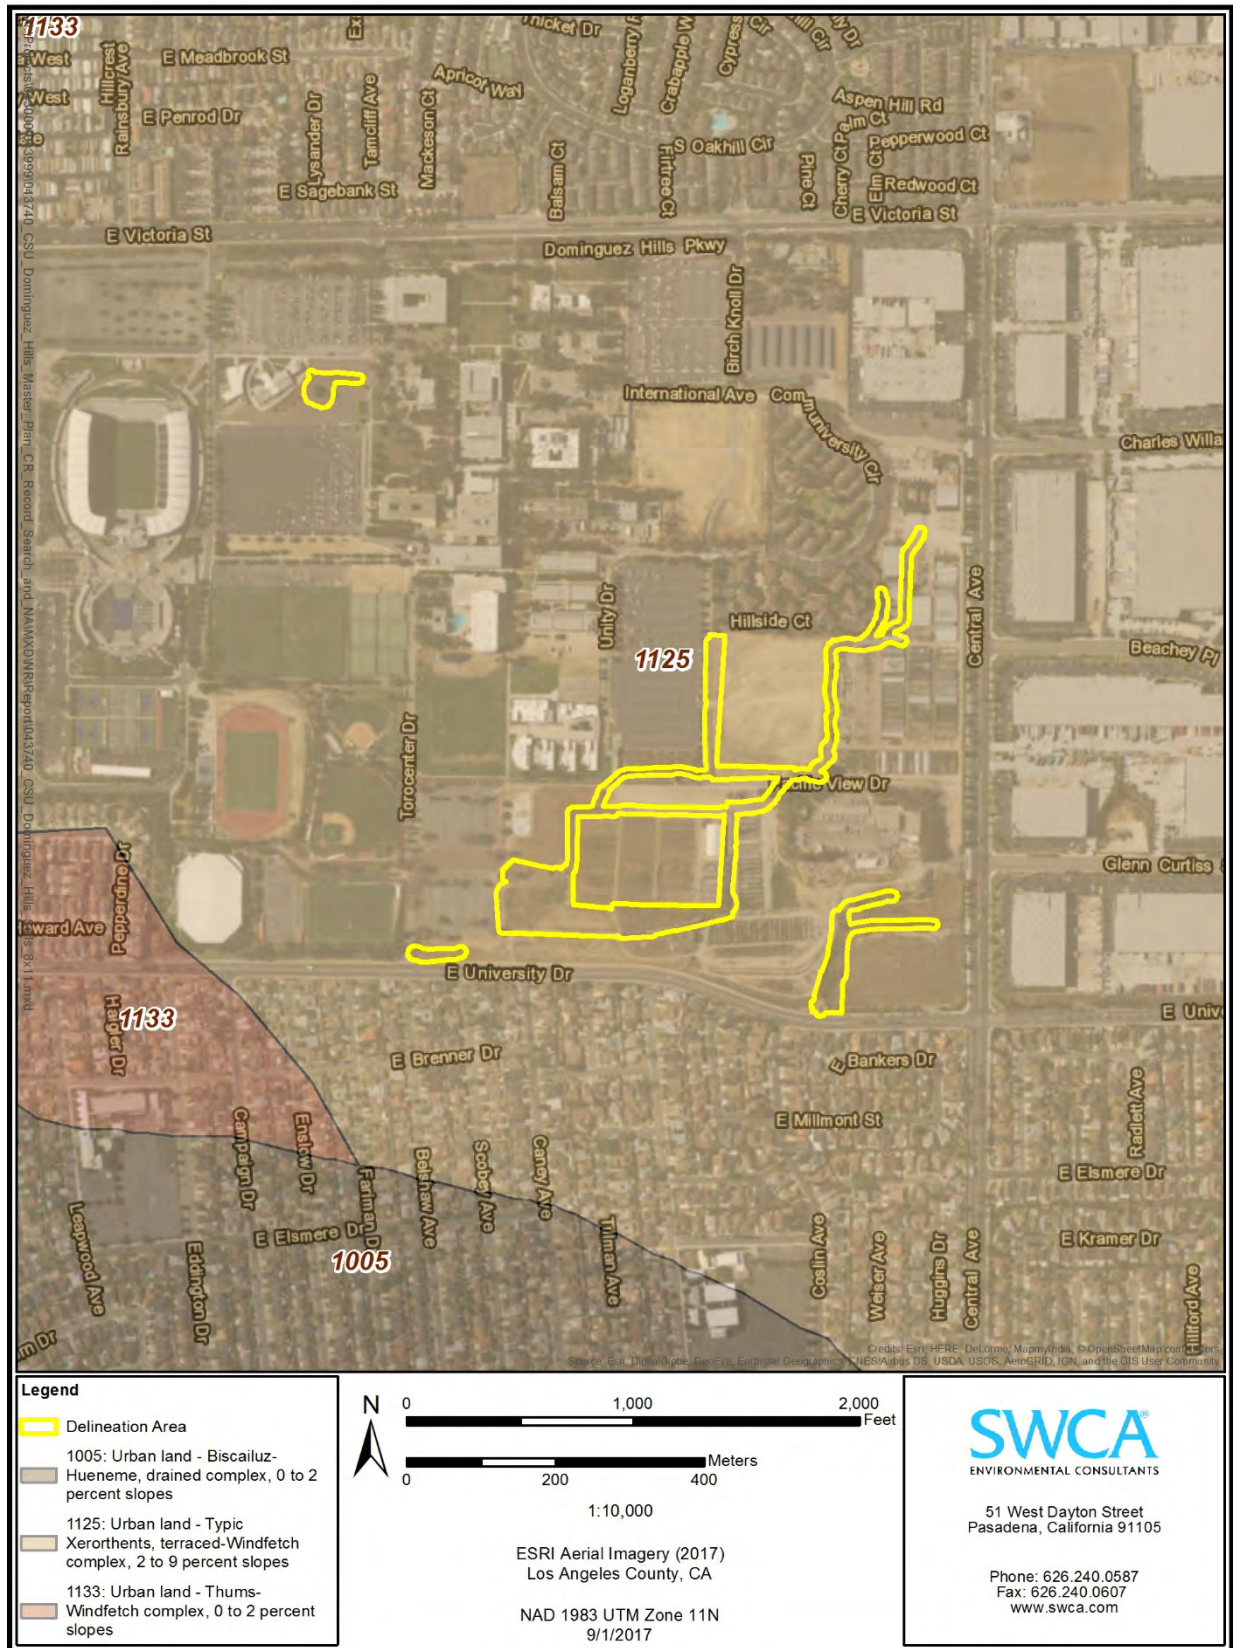

4.4 Sample Plot Results

Seven sample plots including soil pits (locations shown in Appendix A) were examined and data recorded on Arid West data sheets. Observations are discussed below, and data sheets are included in Appendix B.

4.4.1 Sample Plot 1

Sample Plot 1 is located at the northern site and documents conditions in the freshwater emergent wetland located near the Extended Education Center. The soil pit was located in a low-lying depressed area 200 feet west of Toro Center Drive and 110 feet south of Parking Lot 3. Vegetation within the sample plot contained Canary Island pines and cudweed. The area is a managed plant community which receives regular maintenance and has a thick layer of mulch. Based on a review of the historical aerial imagery, the sample area has been historically dominated by grasses or grass like species. Vegetation present within the sample plot was insufficient to pass the hydrophytic vegetation dominance test. The investigation of soils revealed clay loam and clay soils that were saturated throughout the pit. The soil from the surface down to 3 inches was clay loam (10YR 3/1). Red redox concentrations (5YR 5/6) occurred from 3 to 18 inches; and clay (10YR 3/1) soils from 18 to 22 inches. The redox concentrations, matrix value and chroma met the criteria for depleted dark surface (F7). No wetland hydrology indicators were observed in the sample plot during the survey. However, in 2004 to 2005, CSUDH conducted fairy shrimp surveys within the wetland feature during the dry season and sampling identified fairy shrimp cysts (*Branchinecta lindahli*) which is considered a hydrological indicator (B13). Due to the presence of hydric soils, and wetland hydrology, Sample Plot 1 may meet the requirements of a USACE problematic wetland.

Figure 4. Soils Map

4.4.2 Sample Plot 2

Sample Plot 2 included a 10-foot diameter plot located in the open field approximately 200 feet north and slightly upslope from Sample Plot 1, and approximately 25 feet west of the drainage swale (refer to Appendix A for plot location). Vegetation consisted of native and non-native grasses and forbs, including Italian wild rye (*Festuca perennis*), wild oats (*Avena* sp.), English plantain (*Plantago erecta*), bristly ox-tongue (*Helminthotheca echioides*), and Fuller's teasel (*Dipsacus fullonum*). The dominance of Italian wild rye was sufficient to pass the hydrophytic vegetation dominance test. The soil from the surface down to 2 inches was sandy clay (10YR 3/2) and included roots and decomposing organic material; sandy clay (10YR 5/3) with yellowish brown redox concentrations (10YR 5/8) and large patches of a dark reduced matrix (10YR 2/1) occurred from 2 to 6 inches; and silty clay (10YR 5/3) occurred from 6 to 22 inches. Fill material was observed throughout the pit with a few isolated patches of red concentrations around the fill material. Soil in Sample Plot 2 met the criteria for redox depressions (F8). No wetland hydrology features were observed in the sample plot. Sample Plot 2 did not meet the criteria for a USACE three-parameter wetland.

4.4.3 Sample Plot 3

Sample Plot 3 is located at the northern site and documents conditions in the freshwater emergent wetland located near the Extended Education Center. The soil pit is located in a low-lying depressed area 200 feet west of Toro Center Drive and 110 feet south of Parking Lot 3. Vegetation within the sample plot consisted of a small patch of common spikerush. The area is a managed plant community which receives regular maintenance and has a thick layer of mulch. Vegetation present within the sample location was sufficient to pass the hydrophytic vegetation dominance test. The investigation of soils revealed clay loam and clay soils that were saturated throughout the pit. The soils at the sample plot from the surface down to 24 inches were clay loam (10YR 3/1). Soils in Sample Plot 3 met the criteria for depleted below dark surface (A11). No wetland hydrology indicators were observed in the sample plot during the survey. However, in 2004 to 2005, CSUDH conducted fairy shrimp surveys within the wetland feature during the dry season and sampling identified fairy shrimp cysts (*Branchinecta lindahli*) which is considered a hydrological indicator (B13). Due to the presence of hydrophytic vegetation, hydric soils, and wetland hydrology, Sample Plot 3 may meet the requirements of a USACE wetland.

4.4.4 Sample Plot 4

Sample Plot 4 is located at the northern site and is situated along the northern edge of the freshwater emergent wetland. The plot included a two meter diameter plot that was located in an unvegetated swale, just downstream from a culvert located on the edge of Toro Center Drive (Appendix A). Vegetation within the feature appears to receive regular maintenance (e.g., mulching, herbicide application) which prevents the establishment of vegetation. The lack of hydrophytic vegetation results in the plot not meeting the criteria for the dominance test. The vegetation is considered to be problematic due to the manipulation that occurs within the feature. The soil from the surface down to 3 inches was sandy clay (10YR 3/1), from 3 to 24 inches the soil clay loam (10YR 4/3) with patches of a dark reduced matrix (10YR 5/2). Soil in Sample Plot 4 met the criteria for depleted below dark surface (A11) and redox dark surface (F6). A biotic crust was observed in the sample plot (B12). In addition, in 2004 to 2005 CSUDH conducted fairy shrimp surveys within the wetland feature during the dry season and sampling identified fairy shrimp cysts (*Branchinecta lindahli*) which is considered a hydrological indicator (B13). Due to the presence of hydric soils, wetland hydrology, and problematic vegetation, Sample Plot 4 may meet the requirements of a USACE problematic wetland.

4.4.5 Sample Plot 5

Sample Plot 5 is located in the southern portion of the delineation area along Drainage 1. It included a five meter diameter plot located at the southern end of the ephemeral drainage located along Birchknoll Road, which terminates at a culvert located within a man-made detention basin (Appendix A). The basin

had been recently mowed at the time of the delineation; therefore vegetation was identified based on the remains of the cut vegetation within the plot. Vegetation within the plot consists of mowed mulefat (*Baccharis salicifolia*), saltmarsh club-rush (*Schoenoplectus maritimus*), short pod mustard, and spotted spurge (*Euphorbia maculata*). The vegetation observed did not meet the criteria for hydrophytic vegetation. Soil consisted of heavily compacted loamy sand (2.5YR 5/4) from the surface down to 16 inches. Soil within the plot consists of fill material and was observed throughout the pit. No evidence of wetland hydrology was observed within the sample plot. Due to the lack of hydrophytic vegetation, hydric soils and wetland hydrology indicators, this sample plot did not meet the requirements of a USACE three-parameter wetland.

4.4.6 Sample Plot 6

Sample Plot 6 is located in the southern portion of the delineation area along Drainage 1. It included a five meter diameter plot located approximately 280 feet north of East University Drive (Appendix A). The basin had been recently mowed at the time of the delineation; therefore vegetation was identified based on the remains of the cut vegetation within the plot. Vegetation within the plot is dominated by short pod mustard and spotted spurge and does not meet the criteria for any of the hydrophytic vegetation indicators. Soil consisted of heavily compacted loamy sand (2.5YR 5/4) from the surface down to 16 inches. Soil within the plot consists of fill material and was observed throughout the pit. No evidence of wetland hydrology was observed within the sample plot. Due to the lack of hydrophytic vegetation, hydric soils, and wetland hydrology indicators, this sample plot did not meet the requirements of a USACE three-parameter wetland.

4.4.7 Sample Plot 7

Sample Plot 7 is located in the southern portion of the delineation area along Drainage 3. It included a five meter diameter plot located approximately 200 feet north of East University Drive (Appendix A). The plot is dominated by a dense short pod mustard and hairy leaved sunflower (*Helianthus annuus*) and does not meet the criteria for any of the hydrophytic vegetation indicators. Soil consisted of heavily compacted loamy sand (2.5YR 5/4) from the surface down to 16 inches. Soil within the plot consists of fill material and was observed throughout the pit. No evidence of wetland hydrology was observed within the sample plot. Due to the lack of hydrophytic vegetation, hydric soils, and wetland hydrology indicators, this sample plot did not meet the requirements of a USACE three-parameter wetland.

4.4.8 Sample Plot 8

Sample Plot 8 is located in the southern portion of the delineation area along Drainage 4. It included a five meter diameter plot located approximately 80 feet north of East University Drive (Appendix A). The plot is located approximately 20 feet east of the ephemeral drainage in an area dominated by short pod mustard and tree tobacco. A small stand of mulefat is located to the south adjacent to rip-rap that was installed before the culvert. Vegetation in the sample plot consisted of dense stands of short pod mustard, hairy leaved sunflower, and tree tobacco on the western slope and did not meet the criteria for any of the hydrophytic vegetation indicators. Soil consisted of heavily compacted loamy sand (2.5YR 5/4) from the surface down to 16 inches. Soil within the plot consists of fill material and was observed throughout the pit. No evidence of wetland hydrology was observed within the sample plot. Due to the lack of hydrophytic vegetation, hydric soils, and wetland hydrology indicators, this sample plot did not meet the requirements of a USACE three-parameter wetland.

4.5 Drainages

The southern portion of the delineation area contains a series of ephemeral drainage features (Drainages 1, 2, 3, and 4). Due to the presence of bed and bank, the drainages are potentially subject to CDFW jurisdiction under Sections 1600–1602 of the California Fish and Game Code. The drainages may also be considered

non-wetland waters of the U.S. and State due to the presence of OHWM and connectivity to Dominguez Channel and the Los Angeles River.

4.5.1 Drainage 1

Drainage 1 is an ephemeral drainage that is characterized as a road side ditch/ drainage flowing south on the west side of Birchknoll Road to Pacific View Drive and a culvert which enters into Heritage Creek Nature Preserve and flows to into culvert which connects to Drainage 2. The drainage is fed from runoff from Birchknoll Road, Pacific View Drive, and from a graded lot located adjacent to the feature. The width of the OHWM varies but has an average width of 2 feet (Appendix B, OHWM Field Form 1). The distance between the top of bank and the OHWM is narrow, generally with a width of 1 foot. No water was observed in the drainage at the time of the survey. The drainage was devoid of all vegetation. Soils within the drainage are largely coarse silt.

4.5.2 Drainage 2

Drainage 2 is an ephemeral altered drainage that extends from Pacific View Drive south through open fields to a manmade basin and culvert north of East University Drive. The drainage is fed from Heritage Creek Nature Preserve and Parking Lot 7. The width of the OHWM varies but has an average width of 3 feet (Appendix B, OHWM Field Forms 5 and 7). The distance between the top of bank and the OHWM is narrow, generally with a width 2 feet. No water was observed in the drainage at the time of the survey. The portion of the drainage located on the western end of the maintenance is lined with large pieces of broken concrete. The drainage is largely devoid of vegetation or contains mowed ruderal upland species. Soils within the drainage vary from coarse silt to fine sand.

4.5.3 Drainage 3

Drainage 3 is an ephemeral drainage south of Pacific View Drive flowing southwest and south to a manmade basin and culvert north of East University Drive. The drainage is fed from runoff from vacant lots located north of Pacific View Drive and from culverts located along Pacific View Drive. The width of the OHWM varies but has an average width of 3 feet (Appendix B, OHWM Field Forms 2, 3, and 4). The distance between the top of bank and the OHWM is generally narrow, with an average width of 2 feet. No water was observed in the drainage at the time of the survey. Vegetation within the drainage consists of ruderal upland species including bristly ox-tongue, short pod mustard, prickly lettuce (*Lactuca serriola*) and tree tobacco. Vegetation within the manmade basin consists of hairy leaved sunflower, and short pod mustard. The drainage on the eastern side of the maintenance facility has been filled with soil and construction debris. Soils within the drainage vary from coarse silt to fine sand.

4.5.4 Drainage 4

Drainage 4 is an ephemeral drainage that is located south of the Physical Plant and flows west and south to a culvert north of East University Drive. The drainage is fed from runoff from the area around the Physical Plant. The width of the OHWM varies but has an average width of 4 feet (Appendix B, OHWM Field Form 6). The distance between the top of bank and the OHWM is narrow generally with a width of 3 feet. No water was observed in the drainage at the time of the survey. Vegetation within the drainage consists of ruderal upland species including short pod mustard, tree tobacco and hairy leaved sunflower. Soils within the drainage vary from coarse silt to fine sand.

4.6 Functions and Values of Jurisdictional Areas

Overall the jurisdictional features in the delineation area do not provide significant wildlife habitat and primarily provide dispersion of storm water and sediment into manmade basins and the storm water drains. However, the freshwater emergent wetland and surrounding uplands in the northern portion of the delineation area provides habitat function and values for fairy shrimp which have historically occurred at that location.

5 WETLAND/WATERS DELINEATION

This Wetlands/Waters Delineation and Assessment identifies potential federal and state jurisdictional areas within the delineation area. These jurisdictional results are preliminary and are subject to review by the USACE prior to issuance of any permits. This preliminary jurisdictional determination report should be submitted to USACE and CDFW to determine if a nationwide permit under Section 404 of the Clean Water Act and a Streambed Alteration Agreement under Sections 1600–1602 of the California Fish and Game Code are necessary for the project. A determination by USACE is necessary to allow RWQCB to proceed with the Waste Discharge Requirements (WDR) permit process. During the permit review process, USACE and/or CDFW may conduct a site visit to verify the conditions and jurisdictional areas identified in this report, and will approve or request amendments to the report based on their findings. The rationale for considering wetlands and waters in the delineation area to be potentially jurisdictional is discussed below.

Based on the literature review and field investigation, it is the delineator's opinion that the freshwater seasonally flooded wetland does not meet the criteria of a CDFW aquatic resource or state waters under the jurisdiction of RWQCB (Table 1). The wetland is in a depressed area that has been altered by the construction of the Extended Education Center and associated parking lots. This feature contains hydric soils and wetland hydrology. Although Sample Plots 1, 3 and 4 may meet the requirements of a USACE three-parameter wetland; the wetland is isolated and has no outlet and therefore no hydrological connection to any traditional navigable water and may not be considered wetland waters of the U.S. under the jurisdiction of the USACE pursuant to Section 404 of the CWA.

In addition, it is the delineator's opinion that the drainage channels (Drainages 1, 2, 3, and 4) located in the southern portion of the delineation area meet the criteria of a USACE and RWQCB jurisdictional non-wetland waters, as well as a CDFW aquatic resource (Table 1). The drainage features in the delineation area contain defined bed and banks, and OHWMs. The drainage channels flow in a general southerly direction where they enter culverts and are presumed to enter the Dominguez Channel and eventually the Los Angeles River. Table 1 quantifies the total area of potential USACE, CDFW, and RWQCB jurisdictional waters within the survey areas.

Table 1. Aquatic Resources within the Survey Areas

Project Location	Aquatic Resource Type	Aquatic Resources Classification		Aquatic Resource Size for Wetlands (acres)	Aquatic Resource Size Required for Stream Channels USACE/RWQCB (acres)	Aquatic Resource Size Required for Stream Channels CDFW (acres)
		Cowardin	Location (lat/lon)			
Survey Area	Seasonally Flooded Wetland	Palustrine Emergent Wetland	33.865184° 118.258212°	0.238	-	-
Survey Area	Ephemeral Drainage 1	NA	33.861014° 118.252525°	-	0.078	0.138
Survey Area	Ephemeral Drainage 2	NA	33.859597° 118.254535°	-	0.427	0.642
Survey Area	Ephemeral Drainage 3	NA	33.859886° 118.252208°	-	0.477	0.754
Survey Area	Ephemeral Drainage 4	NA	33.858467° 118.250619°	-	0.216	0.431

5.1 U.S. Army Corps of Engineers Jurisdictional Areas

As mapped on the Wetlands/Waters Delineation and Assessment Map, areas potentially subject to USACE jurisdiction under Section 404 of the Clean Water Act consist of the of the freshwater emergent wetland and four ephemeral drainage features (Drainages 1, 2, 3, and 4). Potential jurisdiction is based on the evidence of dominant wetland vegetation, hydric soil, and wetland hydrology, OHWM and hydrological connection of the ephemeral drainages to the Dominguez Channel and the Los Angeles River, a traditional navigable water. The total non-wetland waters potentially subject to USACE jurisdiction consist of 1.198 acres and 6,543 linear feet (Appendix A).

5.2 Regional Water Quality Control Board Jurisdictional Areas

As mapped on the Wetlands/Waters Delineation and Assessment Map, areas potentially subject to RWQCB jurisdiction under Section 401 of the Clean Water Act consist of the freshwater emergent wetland and four ephemeral drainage features (Drainages 1, 2, 3, and 4). Potential jurisdiction is based on the evidence of dominant wetland vegetation, hydric soil, and wetland hydrology, OHWM and hydrological connection of the ephemeral drainages to the Dominguez Channel and the Los Angeles River, traditional navigable water. The total wetland waters potentially subject to RWQCB jurisdiction consists of 0.238 acres. The total non-wetland waters potentially subject to RWQCB jurisdiction consist of 1.198 acres and 6,543 linear feet (Appendix A).

5.3 California Department of Fish and Wildlife Jurisdictional Areas

As mapped on the Wetlands/Waters Delineation and Assessment Map, areas potentially subject to CDFW jurisdiction under Sections 1600–1602 of the California Fish and Game Code consist of the four ephemeral

drainage features (Drainages 1, 2, 3, and 4). Potential jurisdiction is based on the evidence of a bed and bank. The total wetland waters potentially subject to CDFW jurisdiction consists of 0.238 acres. The total potential CDFW jurisdictional streambeds consist of 1.965 acres and 7,270 linear feet (Appendix A).

Appendix B: Field Data Sheets

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: CSUDH City/County: CARSON/LOS ANGELES Sampling Date: 8/19/2017
 Applicant/Owner: CSUDH State: CA Sampling Point: 01
 Investigator(s): Matt Scump Section, Township, Range: S0622, T33, R19W
 Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 2
 Subregion (LRR): L.P.R.C. Lat: 33.86531° Long: -118.258302° Datum: NAD 83
 Soil Map Unit Name: Upland earths, formed with clay, 2-4% NW classification: NA
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)
 Are Vegetation Soil or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No
 Are Vegetation Soil or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Hydric Soil Present?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	
Remarks: <u>Area is heavily altered as a result of construction of Extended Education Center and parking lots. Area is regularly maintained resulting in no absents of plants. Only shrub have been identified within the depression.</u>		

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: <u>5.4</u>)	Absolute % Cover	Dominant Species?	Indicator Status	Dominance Test worksheet: Number of Dominant Species That Are OBL, FACW, or FAC: <u>3</u> (A) Total Number of Dominant Species Across All Strata: <u>2</u> (B) Percent of Dominant Species That Are OBL, FACW, or FAC: <u>0%</u> (A/B)
1. <u>Plants</u>	<u>40</u>	<u>Yes</u>	<u>LPL</u>	
2. _____				
3. _____				
4. _____

--	---

Potential anthropogenic influences on the channel system:
Runoff from Pacific View Drive, erosion from graded lot, wattles installed along length of drainage and installation of culverts

Brief site description:
Man-made drainage located along Pacific View Dr. Single low flow channel lacking vegetation. Approximately two feet wide. Heavily impacted by development. Fed by sheet flow from Road and adjacent lot.

Checklist of resources (if available):

<input checked="" type="checkbox"/> Aerial photography	<input type="checkbox"/> Stream gage data
Dates:	Gage number:
<input checked="" type="checkbox"/> Topographic maps	Period of record:
<input type="checkbox"/> Geologic maps	<input type="checkbox"/> History of recent effective discharges

<input type="checkbox"/> Other studies	

- Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:**
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
 2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
 3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
 - a) Record the floodplain unit and GPS position.
 - b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
 - c) Identify any indicators present at the location.
 4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
 5. Identify the OHWM and record the indicators. Record the OHWM position via:

<input checked="" type="checkbox"/> Mapping on aerial photograph	<input checked="" type="checkbox"/> GPS
<input checked="" type="checkbox"/> Digitized on computer	<input type="checkbox"/> Other:

- Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:**
- Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
 - Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
 - Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
 - Record the floodplain unit and GPS position.
 - Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
 - Identify any indicators present at the location.
 - Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
 - Identify the OHWM and record the indicators. Record the OHWM position via:

Project: *CSU DH JD*
 Project Number: _____ Date: *8/9/2017* Time: *1400*
 Stream: *unnamed drainage* Town: *CARSON* State: *CA*
 Investigator(s): *Matt Schamp* Photo begin file#: _____ Photo end file#: _____

7

Y / N Do normal circumstances exist on the site?
 Y / N Is the site significantly disturbed?

Location Details: *South of CSU DH Perimeter Road*
 Projection: *Lat Long* Datum: *NAD 83*
 Coordinates: *33.859270, -118.255230*

Potential anthropogenic influences on the channel system:
Source of flow is sheet flow off of graded field. Cement basin located along boundary, and a culvert located in southwest portion of basin. Vegetation in area is mowed.

Brief site description:
Small, narrow single channel fed by erosional features to the north. Ending at a culvert located in the southwest portion of the drainage basin.

- Checklist of resources (if available):
- Aerial photography
 - Topographic maps
 - Geologic maps
 - Vegetation maps
 - Soils maps
 - Rainfall/precipitation maps
 - Existing delineation(s) for site
 - Global positioning system (GPS)
 - Other studies
 - Stream gage data
 - Gage number: _____
 - Period of record: _____
 - History of recent effective discharges
 - Results of flood frequency analysis
 - Most recent shift-adjusted rating
 - Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event

- Procedure for identifying and characterizing the floodplain units to assist in identifying the OTHM:**
- Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
 - Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
 - Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
 - Record the floodplain unit and GPS position.
 - Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
 - Identify any indicators present at the location.
 - Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
 - Identify the OTHM and record the indicators. Record the OTHM position via:
 - Mapping on aerial photograph
 - Digitized on computer
 - GPS

**RE: Results of a Cultural Resources Analysis for the California State University
Dominguez Hills 2018 Master Plan, Los Angeles County, California.**

Dear Ms. Finkelstein:

SWCA Environmental Consultants (SWCA) was retained by WSP USA to conduct a cultural resources analysis for the proposed California State University, Dominguez Hills (CSUDH) 2018 Master Plan (Project). The CSUDH campus is located in Carson, Los Angeles County, California (Figure 1- 2). The Area of Potential Impact (API) is defined as the property within boundary of the CSUDH campus (Figure 3. The Master Plan provides for new academic administrative student housing and support facilities, market-rate apartments and business park, parking structures and improvements within the core campus area and the eastern portion of the campus.

This memorandum summarizes the results of a cultural records search and a Native American contact program completed to address the presence of any previously recorded cultural resources within the study area. All cultural resources work was conducted under the supervision of SWCA Cultural Resources Project Manager Alyssa Newcomb, M.S., Registered Professional Archaeologist (RPA). SWCA Archaeologist Erica Nicolay, M.A., conducted the records search, conducted Native American outreach, and coauthored this report. SWCA Principal Investigator Heather Gibson, Ph.D., RPA, served as quality control officer for the project. Ms. Newcomb, Ms. Nicolay, and Dr. Gibson exceed the Secretary of the Interior's Professional Qualifications Standards (PQS) in archaeology.

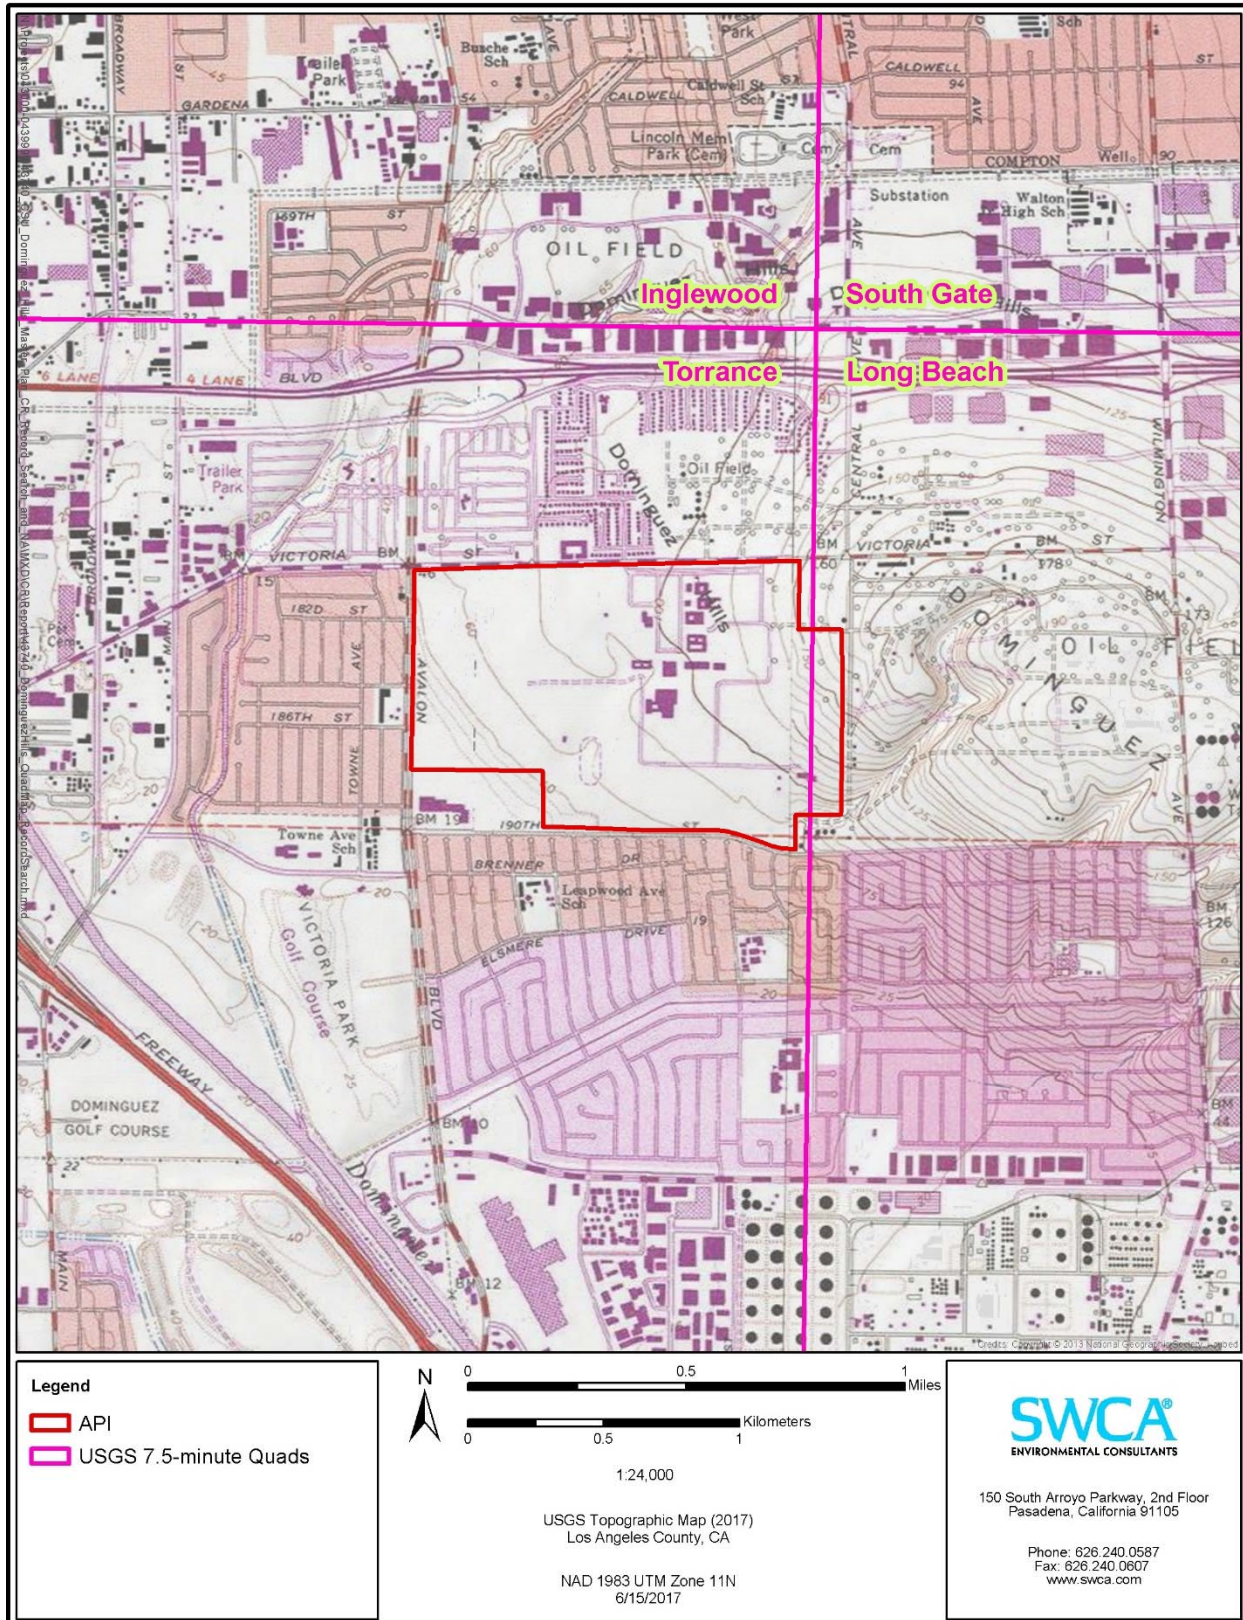

Figure 2. Project location map.

Figure 3. Project overview map.

CULTURAL RESOURCES

Records Search: On May 17, 2017, SWCA archaeologist Erica Nicolay, B.A., conducted an in-house records search of the California Historical Resources Information System (CHRIS) at the South Central Coastal Information Center (SCCIC) located on the campus of California State University, Fullerton. The search included any previously recorded cultural resources and investigations within a 0.5-mile radius of the API. The search also involved a review of the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), the California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list, and the California State Historic Resources Inventory list. In addition, the search consisted of a review of all available historic U.S. Geologic Survey (USGS) 7.5- and 15-minute quadrangle maps. SWCA also reviewed property-specific historical and ethnographic context research to identify information relevant to the project site. Research focused on a variety of primary and secondary materials relating to the history and development of the project site. Sources consulted included historical maps, aerial and ground photographs, building permits, ethnographic reports, soil reports, and other environmental data.

Prior Cultural Resources Studies within 0.5-mile of the API: Results of the CHRIS records search identified 10 previous cultural resources investigations that have been conducted within 0.5-mile of the API. Of these studies, seven were conducted within the API and two were within the 0.5-mile buffer. The remaining study consisted of an overview of the general vicinity. Details pertaining to these studies are presented below in **Error! Reference source not found.** The western half of the API was previously surveyed in 2000 as part of a cultural resource inventory for the CSUDH campus (Bonner 2000). At the time of that study, much of the campus had already been developed and no prehistoric or historic cultural resources were identified during survey work. However, the study states that there was a moderate sensitivity for prehistoric sites due to the presence of documented subsurface sites in the immediate vicinity, including site P-19-000794 (Bonner 2000). Additionally, the report states that many archaeological sites in the nearby areas are not necessarily manifest on the surface and are made up exclusively of subsurface deposits. For example, then-recent construction monitoring at the nearby Arco Refinery in Carson and the Unocal Refinery in San Pedro, two locations that had been developed for over 75 years, resulted in the recovery of a prehistoric burial ground and a dense, prehistoric habitation site containing over 400 hundred stone tools, respectively (Bonner 2000:9).

Table 1. Prior Cultural Resources Studies within 0.5-miles of the API.

Previously Recorded Cultural Resources within 0.5-mile of the API: The CHRIS records search also identified two previously recorded cultural resources within a 0.5-mile radius of the API. Of these resources, one is a historic built resource located within the API. The built resource is a concrete velodrome bicycle track known as the “7-Eleven Olympic Velodrome” which was recorded in 2000 and nominated for listing in the CRHR by Lawrence Fafarman. This track was used for events during the 1984 Summer Olympics and was demolished in 2003 (Harmon 2009); the current StubHub Center was built in its place. The prehistoric resource located outside the API but within 0.5 miles consists of a lithic scatter located approximately 0.25 miles northwest of the northwestern-most corner of the campus boundary. The site was initially recorded in 1977 by Rosen and at the time, the majority of the site was covered with 10 feet of fill. Archaeological testing was conducted in 1976 as part of the 1977 recording and determined to be intact, yielding 671 stone tools, projectile points, ground stone fragments, and flakes. A mobile home park was later constructed on top of the site. The site has not been updated since its initial recordation, and has not been evaluated for inclusion in the CRHR. Details pertaining to these resources are presented below in **Error! Reference source not found.**

Table 2. Previously Recorded Cultural Resources within 0.5 mile of the API

Primary Number (P-19-)	Trinomial (CA-SBR-)	Resource Type	Recorded by and Year Recorded	Resource Description	Relationship to API
P-19-000794	CA-LAN-000794	Prehistoric	Rosen 1977	Lithic Scatter	Outside (within 0.5 mile of API)
P-19-188479	CA-LAN-188476	Historic	Fafarman 2000	7-Eleven Olympic Velodrome	Within

Additional Archival Research: A review of a number of historic and ethnographic maps was conducted to further identify the archaeological sensitivity of the API. An ethnographic map depicting Native American village locations near the various course of the Los Angeles River (Gumprecht 2001:30) show that API is located adjacent to a large wetland area to the west of the

Los Angeles River and in the vicinity of, but not directly adjacent to, several mapped unnamed village locations, including one on the north side of what appears to be Dominguez Hill and south of Compton Creek (Figure 4). The closest named villages include Suangna on the western side of the Los Angeles River and Ahaungna, and Tibahangna on the eastern side. The village of Suangna, also called *Swaanga* meaning junco [rush], was a large, populous village with a described location on a plain near a marsh (McCawley 1996:66). The exact location of the village was unknown, but San Gabriel Mission records indicates that the village was occupied up to 1813 (McCawley 1996:66). The village of Ahuangna, also called *Ahwaanga*, and Tibahangna, also called *Tevaaxa'anga*, were founded by refugees from the San Gabriel area (McCawley 1996:69). An additional place name attributed to *Tevaaxa'anga* is *Tibajabit*, meaning either 'in the old house' or 'there from the house' (McCawley 1996:59). Another ethnographic map showing Native American settlements used for the recruitment of neophytes to the San Fernando and San Gabriel Missions based on King (2004:21) show the API near the village of *Amupubit* (Figure 5). The village of *Tibajabit* is mapped to the east of a river, in the similar location to Tibahangna, and the village of *Soábit* is mapped west of the river, in the similar location to Suangna. A review of the Kirkman-Harriman pictorial and historical map of Los Angeles County depict a Native American village to the northwest on the opposite side of a natural wetland area (Figure 6).

Historic maps depict the API within the San Pedro-Dominguez Land Grant (Figure 7-Figure 8) and was part of the portion of the Rancho San Pedro allocated Manuel Dominguez (Figure 9). Specifically, the API falls within the 500 acres belonging to Victoria D. De Carson and partially incorporates some of the acreage belonging to Maria De Los Reyes. On this historic map, a house is mapped within the De Carson parcel adjacent to a small lake but outside the mapped API. Historic topographic maps from 1896 do not indicate the presence of any structures within the API (Figure 10). A 1926 map of the Dominguez Oil Field show the API within boundary of the Union Oil Company of California parcel (Figure 11). Within the northeast portion of the API, several oil rigs were mapped around Dominguez Hill, including two completed, productive rigs, two uncompleted, idle rigs, and one uncompleted, abandoned rig belonging to the General Petroleum Corporation of California. Historic aerial photographs indicate that the site began to be developed between 1963 and 1972 and reached its current state by 2005.

While the review of these ethnographic and historic maps do not indicate the presence of any specific Native American cultural resources or historic structures or resources, the proximity of mapped locations of these settlements in the vicinity of the API indicate a moderate sensitivity. The presence of a lake immediately to the west as well as the presence of the API at the base of Dominguez Hill indicates that there is a moderate possibility for encountering Native American cultural resources. In addition, one previously recorded prehistoric site located within 0.5 miles of the API yielded 671 artifacts during archaeological testing. While it is unlikely that historic resources and structures related to the ranchos will be encountered within the API, historic active and inactive oil rigs dating to 1926 were mapped within the eastern portion of the API. This area has not been completely developed and historic archaeological resources related the construction, maintenance, and decommissioning of these rigs may be encountered. The previously recorded "7-Eleven Olympic Velodrome" built resource located within the API was demolished in 2003, and it is unlikely that any structural remnants related to this resource remain within the API.

Native American Contact Program: On May 10, 2017, SWCA requested a search of the Sacred Lands Files from the Native American Heritage Commission (NAHC). SWCA received a response letter via email from the NAHC on May 19, 2017, stating that the results of the Sacred Lands File

search failed to identify the presence of Native American cultural resources in the API. The NAHC also provided a list of five Native American groups and individuals who may have knowledge of cultural resources in the API. On May 19, 2017, SWCA sent a letter via mail to the contacts identifying the project location and requesting input.

On June 1, 2017, Andrew Salas contacted SWCA via email and requested to be contacted by the lead agency in order to discuss tribal cultural resources within and near the subject property.

By June 6, 2017, none of the other Native American groups and/or individuals had responded to the letter. Follow-up phone calls were made that day to the remaining four contacts provided by the NAHC.

Anthony Morales stated that there was high likelihood for cultural resources in the area, as suggested by waterways such as Compton Creek and Dominguez Creek. In addition Mr. Morales stated that human remains have been observed during construction in nearby areas such as the Arco Refinery. For these reasons, Mr. Morales requested that any future work on the campus have an archaeological monitor and a Native American monitor from his group present. Additionally, Mr. Morales requested that this be explicitly written into the Master Plan.

Robert Dorame stated that there was high likelihood for cultural resources in the area. Mr. Dorame requested that any future work on the campus have an archaeological monitor and a Native American monitor from his group present.

Mr. Goad and Ms. Candelaria did not answer and voicemails were left providing them with overall project details and contact information should they wish to reply. Supporting documentation and details of the communication of the Native American contact program is included in Attachment B.

CONCLUSION AND RECOMMENDATIONS

The CHRIS records search results indicate that one built-environment resource has previously been recorded within the API: historic built resource P-19-188476, the 7-Eleven Olympic Velodrome. The Velodrome was demolished in 2003 and is no longer present within the API. The Sacred Lands File search failed to identify the presence of Native American cultural resources in the area. The Native American contact program undertaken by SWCA resulted in two individuals indicating that the API has a high sensitivity for cultural resources. One additional Native American party contacted requested consultation with the Lead Agency and did not provide detailed comments to SWCA. The sensitivity of the API has also been noted in previous cultural resources studies (Bonner 2000).

The project area encompasses the existing CSUDH campus. A review of ethnographic and historic maps indicate a moderate sensitivity of the vicinity of the API for Native American cultural resources and moderate sensitivity for historic archaeological resources. Historic aerial photographs indicate that the site began to be developed between 1963 and 1972 and reached its current state by 2005. Prior to its development the site appeared to consist of vacant parcels likely used for agricultural and oil production purposes. Much of the currently undeveloped areas of the campus have historically been paved or developed only with landscaping. In these locations, there is no native ground surface visible, but there is a moderate possibility that archaeological resources

could be preserved beneath the surface. The most recent archaeological survey was conducted in 2000 by Bonner and includes the western half of the current API. Although no archaeological resources have been documented within the subject property, several significant subsurface prehistoric archaeological deposits have been documented in the vicinity of the project area. The presence of large subsurface archaeological deposits in nearby areas, including relatively close to subject property, indicate that there is moderate potential for subsurface deposits on the CUS Dominguez Hills campus, specifically in locations that have not previously been subject to extensive ground disturbance. In addition, the existing campus buildings built between 1963 and 1972 are now 45 years or older and should be assessed for CRHR eligibility to determine if any historical resources are present. The direct and indirect impacts to any eligible historical resources would need to be considered in any future developments of the campus.

The potential for uncovering other previously unknown significant cultural resources is considered moderate. The following avoidance and mitigation measures are recommended to ensure that impacts to previously unidentified archaeological resources are avoided or minimized:

- **CUL-1: Retain a Qualified Archaeologist.** The project shall retain a qualified archaeologist, defined as an archaeologist who meets the Secretary of the Interior's Standards for professional archaeology, to carry out all mitigation measures related to cultural resources.
- **CUL-2: Survey of Undeveloped Areas Prior to Development.** Prior to development or construction of new facilities in portions of the campus which have not previously been developed (particularly the eastern portions of campus which have not been surveyed previously and where the majority of the planned development is located), an archaeological pedestrian survey shall be conducted to identify potentially significant archaeological resources. Resources found to be not significant shall not require mitigation.

If a potentially significant site would be impacted by ground-disturbing activities, either the site should be avoided, or a Phase II investigation would be required to evaluate the site for eligibility for listing in the CRHR. After testing, it may be determined that data recovery will be needed.

- **CUL-3: Avoidance of Potentially Eligible Archaeological Sites through Project Design.** The preferred mitigation is avoidance of any potentially eligible site through project design. If direct impact to a previously unknown archaeological site, by earth-moving activities cannot be avoided, a Phase II investigation would be necessary to determine significance in accordance with the following measure.
- **CUL-4: Phase II (Evaluation) and Phase III (Data Recovery) Cultural Resources Investigations.** Ground-disturbing impacts to any potentially eligible archaeological site should be avoided to the extent feasible. If avoidance is not feasible, CSUDH shall ensure that the potentially impacted archaeological site is assessed for significance, as defined by PRC Section 21083.2 or State CEQA Guidelines Section 15064.5(a), through implementation of Phase II investigations. Should Phase II testing of any previously unknown archaeological site, exhaust the data potential of the site, impact from the

proposed project would be reduced to a less than significant level. Resources found to be not significant shall not require mitigation.

Impacts to a site found to be significant under CRHR Criterion 4 shall be mitigated through a Phase III data recovery program. For such a site, prior to any ground-disturbing activities, a detailed archaeological treatment plan shall be prepared and implemented by a qualified archaeologist. Data recovery investigations will be conducted in accordance with the archaeological treatment plan to ensure collection of sufficient information to address archaeological and historical research questions, and results will be presented in a technical report (or reports) describing field methods, materials collected, and conclusions. Additional testing and/or data recovery phases may involve additional excavation and/or more detailed recordation of resources or more comprehensive archival research. Any cultural material collected as part of an assessment or data recovery effort should be curated at a qualified facility. Field notes and other pertinent materials should be curated along with the archaeological collection. If a resource is found to be significant under CRHR Criterion 1, 2, or 3, alternative mitigation measures may be necessary to reduce the level of impact to less than significant. These measures shall be developed by the qualified archaeologist, in consultation with CSUDH and other stakeholders, as appropriate.

- **CUL-5: Construction Monitoring for Archaeological Resources.** Prior to construction, a qualified archaeological monitor shall be retained to monitor ground-disturbing activities within portions of the campus that do not currently contain structures. These include areas that are currently paved, landscaped, or undeveloped. The duration and timing of the monitoring shall be determined by the qualified archaeologist in consultation with CSUDH. The archaeological monitor will work under the supervision of the qualified archaeologist.
- **CUL-6: Inadvertent Discoveries.** If previously unknown buried cultural deposits are encountered during any phase of project construction, all construction work within 20 m (60 feet) of the deposit shall cease and the qualified archaeologist shall be consulted to assess the find. If the resources are determined to be Native American in origin, the project archaeologist will consult with CSUDH to continue Native American consultation procedures. As part of this process, it may be determined that a Native American monitor will be required. If the discovery is determined to be not significant, work will be permitted to continue in the area. If a discovery is determined to be significant, a mitigation plan should be prepared and carried out in accordance with state guidelines. If the resource cannot be avoided, a data recovery plan should be developed to ensure collection of sufficient information to address archaeological and historical research questions, with results presented in a technical report describing field methods, materials collected, and conclusions. Any cultural material collected as part of an assessment or data recovery effort should be curated at a qualified facility. Field notes and other pertinent materials should be curated along with the archaeological collection.
- **CUL-7: Discovery of Human Remains.** If human remains are discovered, State of California Health and Safety Code Section 7050.5 stipulates that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition

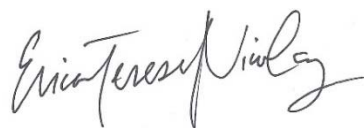

pursuant to PRC Section 5097.98. The Los Angeles County Coroner must be notified of the find immediately. If the human remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission, which will determine and notify a Most Likely Descendent (MLD). The MLD will complete the inspection of the site within 48 hours of notification and may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials.

If you have any questions regarding this letter report, please do not hesitate to contact me at (626) 240-0587 ext. 6652, or anewcomb@swca.com.

RE: Proposed California State University, Dominguez Hills 2017 Master Plan Project, City of Carson; Torrance and Long Beach USGS Quadrangles, Los Angeles County, California

Dear Ms. Newcomb:

A record search of the Native American Heritage Commission (NAHC) *Sacred Lands File* was completed for the area of potential project effect (APE) referenced above with negative results. Please note that the absence of specific site information in the *Sacred Lands File* does not indicate the absence of Native American cultural resources in any APE.

Attached is a list of tribes culturally affiliated to the project area. I suggest you contact all of the listed Tribes. If they cannot supply information, they might recommend others with specific knowledge. The list should provide a starting place to locate areas of potential adverse impact within the APE. By contacting all those on the list, your organization will be better able to respond to claims of failure to consult. If a response has not been received within two weeks of notification, the NAHC requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact via email: gayle.totton@nahc.ca.gov.

Sincerely,

A handwritten signature in blue ink that reads "Gayle Totton".

Re: Archaeologist's request for tribal information for California State University, Dominguez Hills 2017 Master Plan Project City of Carson Torrance and Long Beach USGS Quadrangle Los Angeles County CA

Dear Alyssa M. Newcomb,

We have received your request for information regarding our tribal history and its relationship to the above-mentioned project. Pursuant to AB52, consultation with the lead agency or applicant is confidential (Public Resources Code 21082.3, subd. (c)(2)(A)). To minimize confusion and/or risk a breach of this confidentiality, we politely request that you contact the lead agency for the information you are looking for. Additionally, your presence at the consultation appointment is encouraged.

(21082.3.) (c) (1) Any information, including, but not limited to, the location, description, and use of the tribal cultural resources, that is submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with subdivision (r) of Section 6254, and Section 6254.10 of, the Government Code, and subdivision (d) of section 15120 of Title 14 of the California Code of Regulations, without the prior consent of the tribe that provided the information. If the lead agency publishes any information submitted by California a Native American tribe during the consultation or environmental review process, that information shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. This subdivision does not prohibit the confidential exchange of the submitted information between public agencies that have lawful jurisdiction over the preparation of the environmental document.

With Respect,

D.2 Cultural Built Resources Report

MEMO

TO: Jay Bond, Steve Lohr (CSU)
FROM: Lorraine Ahlquist; WSP Cultural Resources Group (WSP)
SUBJECT: CSUDH Built Resources Report
DATE: June 18, 2018

Introduction/Executive Summary

This summary report serves to inform the content of the California State University, Dominguez Hills (CSUDH) EIR relating to built historical resources for the associated 2018 Master Plan. WSP architectural historians prepared this report in June 2018,¹ utilizing secondary resources and summarizing prior efforts by other consultants. The Draft EIR considers the impacts to built or architectural historical resources as part of its evaluation. Evaluations on archaeological, Native American, and paleontological resources are addressed in separate documentation. This report addresses built historical resources only. Because this report addresses California Environmental Quality Act (CEQA) requirements, the terminology used is consistent with CEQA. The terms used for National Register of Historic Places (NRHP) and National Historic Preservation Act of 1966 (NHPA) compliance are slightly different, but the concepts of eligibility and impact (or effect) would apply for compliance with Section 106 of the NHPA, as described in 36 CFR §800.

Under CEQA, projects that may cause a substantial adverse change in the significance of a historical resource are considered projects that may have a significant effect on the environment. (Pub. Resources Code, §21084.1.) “Historic resource” is defined in Public Resources Code section 21084.1 to include all sites listed in, or determined to be eligible for listing in, the California Register of Historical Resources. The criteria for listing on the California Register of Historical Resources are found in Public Resources Code section 5024.1 and the California Code of Regulations, title 14, section 4852. The criteria are as follows:

- (A) Is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage;
- (B) Is associated with the lives of persons important in our past;
- (C) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic value; or
- (D) Has yielded, or may be likely to yield, information important in prehistory or history.

¹ All WSP architectural historians meet the Secretary of the Interior’s Professional Qualifications Standards.

In addition, sites officially designated as historically significant in a local register of historical resources are presumed to be historically significant. (Pub. Resources Code, §21084.1; CEQA Guidelines, §15064.5(a)(2).) Sites not listed on a register, but that have been determined to be significant or eligible for listing in accordance with an approved historical resources survey also are presumed to be significant. (*Ibid.*) Further, a lead agency has discretion to find that a site that does not meet such criteria is a historical resource for purposes of CEQA. (See Pub. Resources Code, §21084.1; CEQA Guidelines, §15064.5(a)(4).)

The proposed 2018 Master Plan for CSUDH included an assessment of the existing age, condition, and life cycle of the existing campus buildings. The conclusion reached in the 2018 Master Plan Guidelines is that several existing campus facilities no longer provide adequate modern space for the functions they are intended to serve and must be replaced or relocated within the campus. These existing campus buildings are included in Table 1. Campus Facilities Potentially Planned for Alteration, Replacement, or Relocation.

To determine the presence of historical resources on the CSUDH campus, which was the study area for these investigations, the architectural historians completed research, analyzed historic photographs and maps, and reviewed prior documentation on the campus buildings. After evaluation, only one historical resource, the Leo F. Cain Library/Educational Resource Center, was identified and effects to that resource were assessed. After analyzing potential changes, effects, and impacts, the proposed CSUDH 2018 Master Plan would have no effect on the Leo F. Cain Library/Educational Resource Center. No historical resources will be directly or indirectly affected by the proposed efforts described in the 2018 Master Plan.

Archival Research and Records Search

On May 17, 2017, SWCA staff conducted an in-house records search of the California Historical Resources Information System (CHRIS) at the South Central Coastal Information Center (SCCIC) located on the campus of California State University, Fullerton.² The search included any previously recorded cultural resources and investigations within a 0.5-mile radius of the study area, which encompassed the campus in its entirety. The search also involved a review of NRHP listings, the CRHR, the California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list, and the California State Historic Resources Inventory list. In addition, the search consisted of a review of all available historic U.S. Geologic Survey (USGS) 7.5- and 15-minute quadrangle maps. SWCA reviewed property-specific historical and ethnographic context research to identify information relevant to the campus. Research focused on a variety of primary and secondary materials relating to the history and development of the campus. Sources consulted included historical maps, aerial and ground photographs, building permits, ethnographic reports, soil reports, and other environmental data.

Previously Recorded Cultural Resources on the CSUDH Campus:

In 2000, the western half of the CSUDH campus was previously surveyed as part of a cultural resource inventory for the university (Bonner 2000). The CHRIS records search identified one previously recorded on-campus built resource nominated for listing in the California Register of Historical Resources by Lawrence Fafarman. This built resource, known as the “7-Eleven Olympic Velodrome,” was demolished

² Information regarding the records search at the South Central Coastal Information Center (SCCIC) is provided by SWCA, which completed early phases of the work described in this document.

in 2003 (Harmon 2009). The velodrome was a concrete bicycle track, which was used for events during the 1984 Summer Olympics and the current StubHub Center was built in its place (Harmon 2009). Because it is no longer extant, it will not be addressed further in this study or the EIR.

Additional Archival Research:

Historic maps depict the study area within the San Pedro-Domenguez Land Grant and was part of the portion of the Rancho San Pedro allocated Manuel Dominguez. Specifically, the study area falls within the 500 acres belonging to Victoria D. De Carson and partially incorporates some of the acreage belonging to Maria De Los Reyes. On this historic map, a house is mapped within the De Carson parcel adjacent to a small lake but outside the study area. No built resources from the ranchos era remain on the campus.

Historic topographic maps from 1896 do not indicate the presence of any structures within the study area. A 1926 map of the Dominguez Oil Field shows the study area within boundary of the Union Oil Company of California parcel. Within the northeast portion of the study area, several oil rigs were mapped around Dominguez Hill, including two completed, productive rigs, two uncompleted, idle rigs, and one uncompleted, abandoned rig belonging to the General Petroleum Corporation of California. Historic aerial photographs indicate that the site began to be developed between 1963 and 1972 and reached its current state by 2005. No above-ground, built remnants of the oil field era are present on the campus.

As part of the EIR for the 2009 CSUDH Master Plan, the Leo F. Cain Library was identified as a historical resource. Although it was not fifty years of age at that time (and still has not reached that milestone, which is used to determine when enough time has passed for a built resource to be accurately evaluated for historic significance), the 2009 evaluation indicated that the library would be considered exceptionally significant and, therefore, was eligible for the CRHR. For the purposes of consistency with the 2009 Master Plan's EIR, this evaluation will perpetuate that finding.

Historical Context

California State University, Dominguez Hills

In 1960, following increasing growth in Southern California and a demand for higher education, Governor Edmund G. "Pat" Brown allocated funds to develop a state college in Los Angeles County's South Bay region. Originally called South Bay State College, the new school was planned to be located in Palos Verdes on a site overlooking the ocean. The proposed South Bay State College aimed to cater to the area's affluent and growing population, envisioning itself as a California version of an Ivy League institution.

In 1964, Southern California architect A. Quincy Jones of the firm Jones & Emmons was hired to design the proposed campus at Palos Verdes by the college's design team led by Leo F. Cain. As planning for the campus continued, Cain moved forward with plans to open the university in a temporary location, and by 1965, California State College at Palos Verdes became the eighteenth campus within the state university system despite only enrolling seventy-five students when it opened its doors that January. Enrollment fell far short of the four hundred enrollees expected. A small faculty, including Cain, taught the first classes in a Rolling Hills Estate bank building.

In the summer of 1965, the racially charged Watts riots brought to the forefront tensions over policing, segregation, transportation, jobs, and education. Meanwhile, land prices continued to rise on the Palos Verdes peninsula, leading the California State College and University Board of Trustees to choose another location for the campus rather than establishing a permanent campus in Palos Verdes. As a response to both, Governor Brown supported efforts to relocate the campus inland and nearer to minority communities comprising South Los Angeles. Ultimately, Dominguez Hills was chosen as the new location for the school, and in 1966, the school changed its name to California State College, Dominguez Hills. A 346-acre tract in Carson, surrounded at the time by oil wells, farmland, and tract housing, was chosen as the location for the new school. The slow pace of construction and lagging enrollment led Governor Ronald Reagan to recommend closure of the new school after he took office in 1967. Instead, Leo Cain was able to secure construction of the school at its current location. Cain ultimately became its first president.

Around 1964, A. Quincy Jones began drafting a master plan for the new school in Carson. The plan located academic buildings in close proximity to one another, relating the campus buildings to the library, and encouraging students to cross through buildings to reach others. In general, buildings for the campus designed during the original master plan era (1964-1979) featured similar design tenets: concrete construction with overhanging coffered ceilings, a Modernist design aesthetic with entrances at a central or mezzanine level, manipulation of the landscape to create sunken gardens and courtyard spaces at the ground floors, and use of pedestrian circulation patterns that allowed students to walk through and around campus buildings.

The first completed campus buildings, part of a group of buildings known as the Small College Complex, were constructed in 1968. (These are the only buildings that are currently fifty years of age.) The remaining Small College Complex buildings were completed in 1969. Featuring multiple one-story buildings, the Small College Complex provided classroom and college administration spaces for the over 2,600 students who enrolled at Dominguez Hills in the fall of 1970. Meanwhile, construction began in earnest for the larger campus buildings, including the Educational Resources Center (later named the Leo F. Cain Library), the Social and Behavioral Sciences building, and the Natural Sciences and Mathematics building, all of which were completed by 1973 (Figure 1). By the mid-1970s, the second phase of campus development was underway and included the student health center, Humanities and Fine Arts building (later named LaCorte Hall), the University Theatre, and the University Gymnasium.

In 1976, Leo Cain retired and was succeeded by Donald R. Gerth, who oversaw the school's transition to a university after meeting certain enrollment and degree criteria. By the end of the decade, enrollment reached over 7,000. Gerth was also instrumental in bringing the 1984 Los Angeles Summer Olympics to Dominguez Hills, which included construction of a velodrome (no longer extant) for track cycling events. Dominguez Hills has grown to become one of the most diverse universities in the state system with enrollment exceeding 12,000 students and conferring degrees to a substantial number of black and Latino students.

Figure 1. Campus Construction, c. 1970. The Small College Complex is located at the top of the photo and the Leo F. Cain Library/Educational Resource Center is under construction.

A. Quincy Jones, Architect

A. Quincy Jones (1913-1979) was born in Kansas City, Missouri, and moved to California at a young age. He studied architecture at the University of Washington, which viewed architectural design as a problem-solving activity under professor Lionel H. Pries. In 1945, Jones opened his own practice in Los Angeles and largely worked in housing design. Architect Frederick Emmons and A. Quincy Jones formed a partnership from 1951-1969.

In housing design, Jones' work included the Mutual Housing Association (1946-1950), the Case Study #24 tract home, and Eichler Homes (1951-1964). Jones' housing designs focused on incorporating the environment into his floor plans, taking site and landscape elements into consideration. A major feature of his designs included utilizing glazed curtain walls to extend a building's interior into its exterior spaces.

Leo Cain brought in A. Quincy Jones to design the campus for the planned California State College at Palos Verdes. Although the project eventually moved to Dominguez Hills, Jones' firm, Jones & Emmons, developed the master plan for what would eventually become California State University, Dominguez Hills

(Figure 2). In addition to the master plan, Jones designed the school's Small College Complex (1969) and Leo F. Cain Library/Educational Resource Center (1971). Jones stayed on as consulting architect for approximately 15 years (1964-1979) to oversee the master plan for the university. Other architects, including Daniel Dworsky and Carey K. Jenkins, designed the campus buildings.

Figure 2. Campus Master Plan, c. 1970.

A. Quincy Jones taught at the University of Southern California and led the architecture school from 1975 to 1978. He designed a number of university buildings during his career in addition to those at Dominguez Hills, including a carillon tower at the University of California, Riverside and a library at the University of California, Los Angeles. In 1980, California State University, Dominguez Hills posthumously honored Jones with an exhibition of his work.

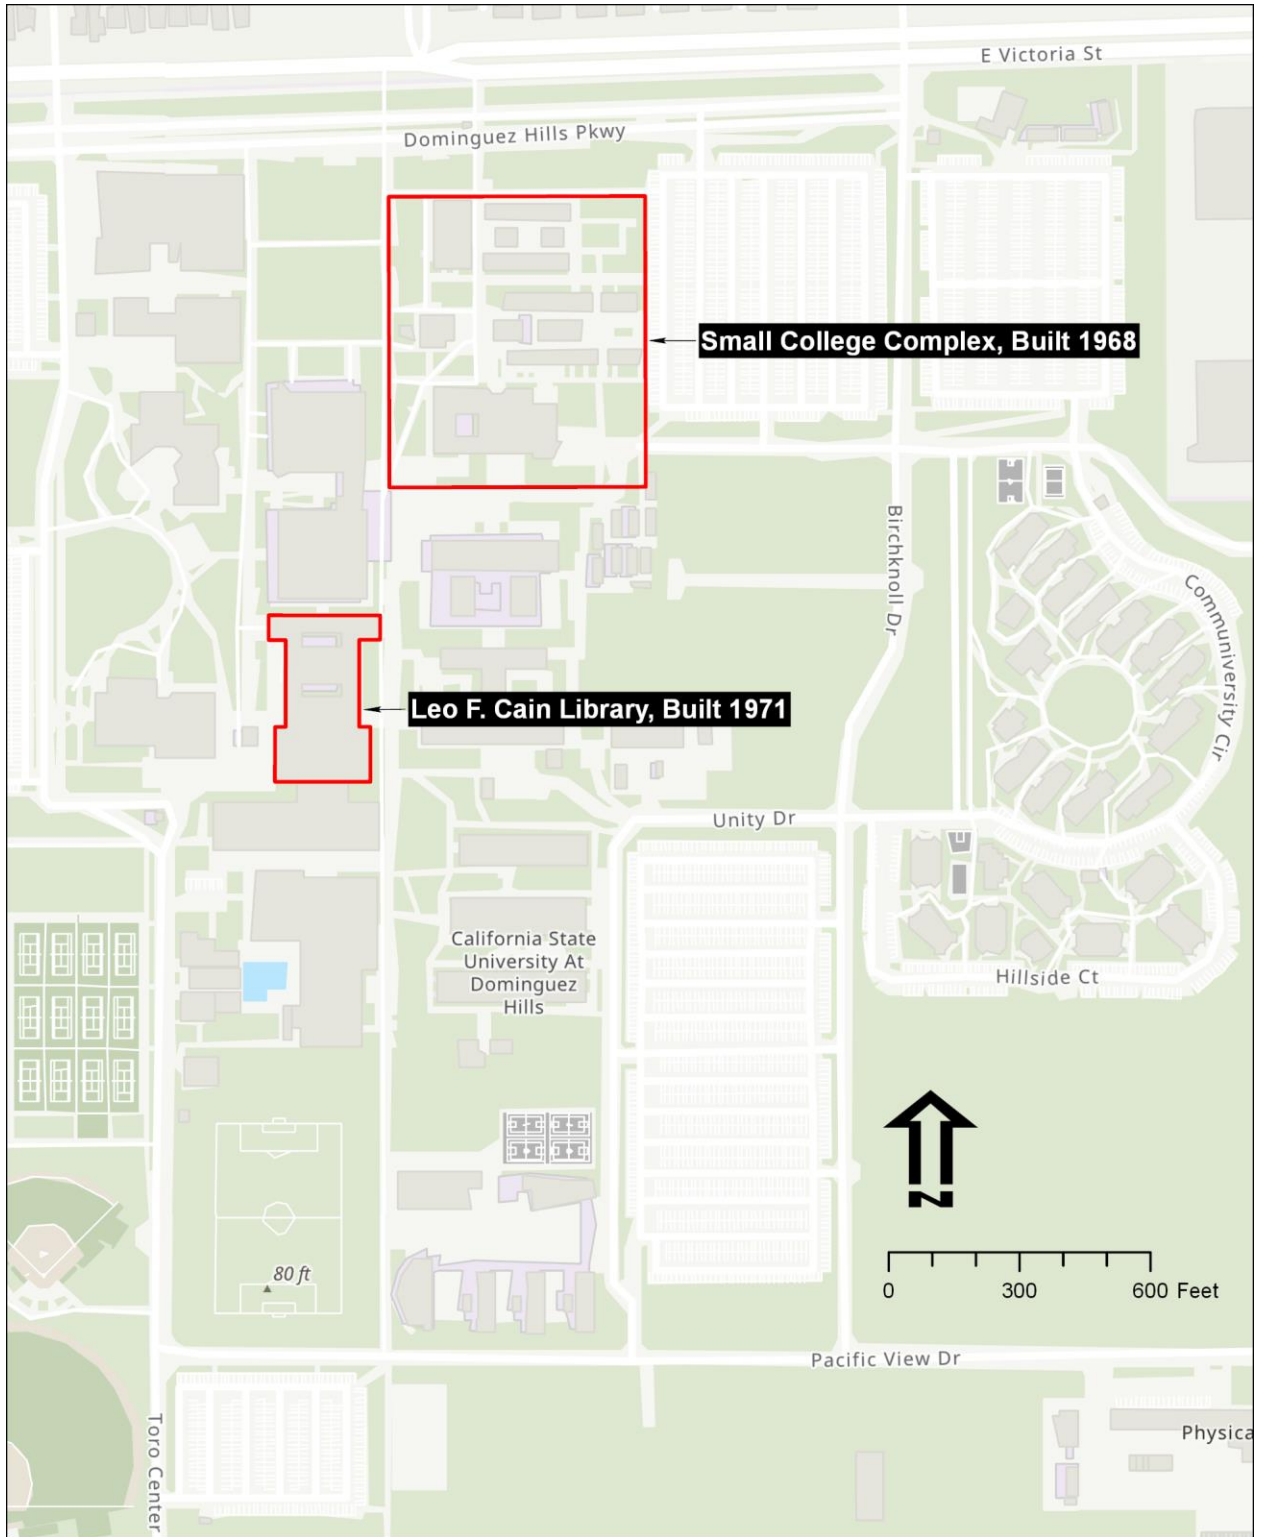

Figure 3. Campus map showing the location of the Small College Complex and the Leo F. Cain Library.

Identification of Historical Resources

The criteria for listing on the California Register of Historical Resources are found in Public Resources Code section 5024.1 and the California Code of Regulations, title 14, section 4852. The criteria are as follows:

- (A) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
- (B) Is associated with the lives of persons important in our past;
- (C) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic value; or
- (D) Has yielded, or may be likely to yield, information important in prehistory or history.

Note that these criteria are similar to the NRHP criteria.

Architectural historians utilized information provided from the CSUDH Space and Facilities Database Management System and the 2009 Master Plan, approved by the university trustees in 2010, to assist in identifying the year-built data for these buildings. This data indicates that only the Small College Complex is more than fifty years of age, the age threshold at which properties should be evaluated and the accepted standard at which adequate time has passed to gain the perspective needed to accurately evaluate buildings for both historic and architectural significance. Historical resources can also achieve significance within the past fifty years. A special consideration in CEQA (CCR §4852) stipulates that a resource less than fifty years old may be considered for listing in the CRHR if it can be demonstrated that sufficient time has passed to understand its historical importance and if it also meets at least one of the standard criteria listed above.

Within the CSUDH campus, two built historical resources require evaluation (Figure 3). The Small College Complex is more than fifty years of age and is evaluated within this document. The Leo F. Cain Library is approximately forty-five years of age, but was identified in the 2009 Master Plan as potentially eligible for the CRHR as a resource that has achieved significance within the past fifty years of age because of its architectural merit. The Leo F. Cain Library is also evaluated within this document to confirm that prior assessment, as CEQA requires updates on CRHR evaluations.

Small College Complex

Architectural Description

The Small College Complex (Figures 4 and 5), which includes the School of Education, is a group of fourteen single-story buildings located on the campus' northern section and constructed of steel frames with concrete masonry unit walls and flat roofs with overhanging eaves. The complex was constructed in 1968 and opened to students in early 1969. It is bound by Victoria Street and Dominguez Hills Parkway to the north, a parking lot to the east, a lawn to the west, and the Social and Behavioral Sciences building to the south. The majority of buildings that comprise the Small College Complex are oriented on an east-west axis nearly parallel to Victoria Street, and have rectangular footprints that vary in size. Several of the buildings form clusters that are contained beneath a single, expansive roof; two such clusters exist and

give the appearance of a five-building Small College Complex when viewed aerially. The complex buildings are connected by a network of sidewalks, covered walkways, patios, and courtyards.

Buildings within the Small College Complex share a similar Modernist design aesthetic common in California and represent a modest vernacular interpretation of International Style architecture that is commonly found nationwide in educational building designs of the era. Exterior walls are clad with eight-inch-by-eight-inch concrete masonry units stacked to form a grid pattern. Solid metal doors and glazed, metal-framed doors are found throughout the complex. Fenestration patterns are generally regular, with paired, metal-framed, three-light windows with horizontal muntins separated by wide vertical mullions. In some locations, glazed curtain walls with mullions form a wide grid pattern. Above the paired windows, a wide band contains projecting horizontal wood rafters that support the flat roof and its overhanging eaves. The band is replaced with clerestory windows instead of three-light windows in some locations. Each exposed rafter is generally located above a paired window mullion or used to divide clerestory windows. Because the building designs are not consistent, there is a collective lack of design harmony among the buildings.

The Small College Complex landscape includes small lawns, mature trees, and shrubbery located along building elevations. Some plantings are found along paths, and within courtyards, trees are generally planted in a grid-like pattern.

Figure 4. View within Small College Complex.

Figure 5. View of Small College Complex building.

Small College Complex Historical Context

The buildings comprising the Small College Complex were the first buildings designed by A. Quincy Jones completed at what was then California State College, Dominguez Hills. According to university archival photos, construction occurred during 1968, and the complex was open to students by 1969. The buildings, identified as the campus' initial buildings on the A. Quincy Jones campus master plan, served the students until the main campus buildings were completed beginning in 1971.

As the campus grew and additional academic and administrative buildings were constructed, the Small College housed an accelerated degree program with faculty members serving as mentors to students. The Small College curriculum featured three- or six-week courses on elementary computer programming, study skills, and writing, with concentrations in environmental, human, and civilization studies. This program was viewed as a means to serve a diverse student population by creating a more intimate learning environment. During its first decade, the Small College contained an admissions office, library, and university bookstore. Additionally, the Small College Complex served as the student union until student fees were increased in the 1980s to raise funds for a new building.

The Small College Complex features a modest design and includes courtyard and patio spaces for outdoor classes. Research has shown that A. Quincy Jones' design for the Small College Complex is nearly identical to his proposed plan for California State College at Palos Verdes developed years earlier for a different setting (Figures 6 and 7). It seems likely that Jones reused that design because of the expedited nature of the Small College Complex construction, and also because the buildings were not intended to be permanent components of the planned campus at CSUDH. Because the elements of A. Quincy Jones' Dominguez Hills campus master plan incorporated different landscape and architectural design elements, the Small College Complex was likely intended to be a temporary solution to the immediate need for campus facilities. According to the 2009 Master Plan EIR, the complex's construction utilized inexpensive materials and was likely not intended to be permanent. The buildings appear largely unchanged since their completion.

Figure 6. A. Quincy Jones Plan for California State College at Palos Verdes (1964)

Figure 7. Small College Complex, c. 1972.

California Register of Historical Resources Evaluation

The Small College Complex was evaluated for significance under CRHR Criteria A, B, and C using guidelines set forth in the CRHR (Pub. Res. Code §5024.1, Cal. Code Regs, tit. 14, section 4852).

The Small College Complex is not eligible under Criterion A. Research has not indicated that the Small College Complex is associated with events that made a significant contribution to the broad patterns of California history. The buildings were constructed quickly to accommodate arriving students and did not influence higher education trends within the CSU system.

Research did not indicate an association with persons significant in the past. Therefore, the Small College Complex is not eligible under Criterion B.

The Small College Complex is not eligible under Criterion C. Research has indicated that the complex is likely A. Quincy Jones' original design for California State College at Palos Verdes. Although the campus at Dominguez Hills is the culmination of that original project, the Small College Complex does not reflect the design characteristics ultimately chosen for the Dominguez Hills campus and incorporated into its original master plan. The Small College Complex design did not influence other campus buildings, either at Dominguez Hills or elsewhere in the CSU system. The 2009 Master Plan EIR also notes that the Small College Complex used inexpensive construction techniques and may have been built as a temporary building complex while construction ensued on the campus' major buildings over the next few years. This design approach is contradictory to the methods employed in significant Modernist buildings of the era that employed high-quality materials, albeit in a new design vocabulary. Therefore, the Small College Complex is not eligible under Criterion C.

The Small College Complex was not evaluated under Criterion D as part of this report, but was considered in archeological assessments.

Therefore, the Small College Complex is **not eligible** for listing in the CRHR.

Leo F. Cain Library/Educational Resource Center

Architectural Description

Located near the center of campus, the Leo F. Cain Library/Educational Resource Center (Figures 8 and 9) is a five-story reinforced concrete building with a smooth concrete exterior and square columns that support an overhanging upper story and flat roof. The building features Modernist architectural design tenets and is an example of the Neo-Formalist style applied to an educational building. One building story is located below grade and is exposed due to the surrounding landscape design employed by the university's original master plan, which sought to create interesting topography on the flat site. The building footprint is generally square and contains two wings that project from its east and west elevations. It is oriented with its facade facing north toward the student union; formerly, this area was a long lawn that stretched to Victoria Street.

The library contains character-defining design tenets of the Neo-Formalist style, including symmetry; flat, projecting rooflines; and columnar supports. The library's symmetrical facade contains no openings in its

second through fourth stories and comprises a vertically scored concrete wall that wraps around to the east and west elevations. Square concrete columns are evenly spaced across the elevation and continue around the entire building. These columns support an overhanging top story with a grid-like coffered ceiling. This upper story wraps around the entire building and features ribbon windows separated by projecting muntins that appear as vertical louvers. A flat roof covers the building. A wide terrace abuts the facade and is located slightly higher in elevation than the surrounding campus walkways and paths and is reached by a concrete staircase.

The east and west elevations are inverses of one another and contain an off-center concrete-faced projection at their middle floors that wraps around the south elevation. Above and below the projection are smooth, stucco-clad walls with metal-framed, vertically oriented single-light windows. Adjacent to the projection and recessed beneath the overhanging top story are a series of metal-framed curtain walls used at each story. Glazed entry doors are found in this recessed area and are located at the building's mezzanine level. The building's south (rear) elevation is generally symmetrical and features the wide concrete projection with windows located above and below the projection. Below grade, the building features concrete walls with large window openings and entry doors that open into designed sunken courtyard and patio spaces.

Elevated walkways and paths surround and abut the library, moving beneath its overhanging top story and connecting the library with its surrounding campus buildings consistent with the original master plan. Mature plantings are found along these paths and within the sunken courtyard and patio spaces.

Figure 8. View west toward library's east elevation.

Figure 9. View east toward library facade and sunken courtyard.

Leo F. Cain Library/Educational Resource Center Historical Context

Completed in 1971, the Leo F. Cain Library/Educational Resource Center, designed by A. Quincy Jones, was the first major building completed on the Dominguez Hills campus. Located in the center of campus, the building is the embodiment of Jones' design philosophy employed for the campus in his original master plan. These design elements include use of concrete for building exteriors, overhanging roofs, building entrances at a central or mezzanine level, courtyard spaces below grade, and a pedestrian circulation network of elevated walkways and paths. By altering the landscape around the library and implementing it for his original master plan, Jones provided dimension and interest to an otherwise flat setting. At the time of its construction, the library became the focal point of the new campus, with all surrounding buildings proximate to and smaller in scale than the library. The library opened to students as the Educational Resource Center on January 15, 1972 (Figure 10). Its name was changed to the Leo F. Cain Library following Cain's retirement in 1976.

Since its construction, the library's immediate setting has been altered with the construction of a student union completed in the 1980s immediately north of the library, using space formerly occupied by a long lawn. However, the location of the student union to the north of the library is consistent with the university's original master plan. South of the library and attached to it via a two-story enclosed glazed walkway is a large library addition. This addition was completed in 2010 as part of a library expansion project and is also consistent with the university's original master plan, which proposed additional buildings south of the library. In the 2009 Master Plan EIR, the library was determined to be a potentially significant historical resource under CEQA if determined eligible for the ~~CRHR~~ NRHP under Criterion G, which allows buildings less than fifty years of age to be listed. [Under the CRHR, the special consideration code also allows the a resource less than fifty years old to be considered for listing in the California Register if it can be demonstrated that sufficient time has passed to understand its historical importance.](#)

Figure 10. Leo F. Cain Library/Educational Resource Center, c. 1970s.

California Register of Historical Resources Evaluation

The Leo F. Cain Library/Educational Resource Center was evaluated for significance under Criteria A, B, and C using guidelines set forth in the CRHR (Pub. Res. Code §5024.1, Cal. Code Regs., tit. 14, section 4852).

The Leo F. Cain Library/Educational Resource Center is not eligible under Criterion A. Research has not indicated the building is associated with events that made a significant contribution to the broad patterns of California history. The building was not influential in trends associated with higher education.

Research also did not indicate an association with persons significant in the past. Therefore, the Leo F. Cain Library/Educational Resource Center is not eligible under Criterion B. Although the building is named for Leo Cain (who contributed to the establishment of CSUDH), the naming of the library is an honorary designation.

The Leo F. Cain Library/Educational Resource Center is eligible under Criterion C. Research has indicated that the complex is A. Quincy Jones' seminal work on the Dominguez Hills campus and the work of a master architect. The building was designed to seamlessly integrate surrounding campus buildings into Jones' master plan for the school, and its prominent location, originally at the end of a long lawn, demonstrated its importance to his campus master plan. Continuing Jones' efforts to design buildings that extend and integrate into their landscape, the library utilizes sunken courtyards and elevated walkways to provide dimension to its otherwise flat surroundings. The building represents the peak of A. Quincy Jones' architectural career during the last decade of his life. It is an excellent example of the Neo-Formalist style

successfully interpreted for a college library building. Therefore, the Leo F. Cain Library/Educational Resource Center is eligible under Criterion C.

The Leo F. Cain Library/Educational Resource Center was not evaluated under Criterion D as part of this report, but was considered in archeological assessments.

The Leo F. Cain Library/Educational Resource Center is largely unchanged since its construction and retains integrity of location, design, materials, workmanship, feeling, and association. The building's integrity of setting has been slightly altered due to the large contemporary library addition to its south; however, this addition is located in an area where the original campus master plan proposed construction of future buildings. The period of significance for the Leo F. Cain Library/Educational Resource Center is 1971, its year of completion, and its historical resource property boundary includes the original library building and its surrounding designed landscape that remains intact.

Therefore, the Leo F. Cain Library/Educational Resource Center is **eligible** for listing in the CRHR. The determinations of eligibility included in this report have not been submitted for review and concurrence by the California State Historic Preservation Office. These determinations are used for purposes of the 2018 Master Plan EIR only.

Additional Buildings Potentially Affected by Actions Contained in the 2018 Master Plan

Historic and archival research indicated that only the Small College Complex, which includes the School of Education, was more than fifty years of age and required a significance evaluation. Based on the analysis, the Small College Complex is not eligible for the CRHR. As stated, the Leo F. Cain Library/Educational Resource Center was previously identified as being potentially eligible before reaching fifty years of age because of its exceptional design merit. However, it is important to note that while the Leo F. Cain Library/Educational Resource Center was determined to be potentially eligible for the CRHR, it will not be directly or indirectly impacted by any proposed 2018 Master Plan activity and will not be replaced, altered, or relocated. In addition to these two assessments, qualified architectural historians examined proposed actions contained in the 2018 Master Plan and reviewed all buildings potentially impacted by proposed relocation, alteration, or replacement. These properties are included in Table 1. Campus Facilities Potentially Planned for Alteration, Replacement, or Relocation. While none of these additional buildings listed below are more than fifty years of age and were not previously determined to be a potentially significant historical resource for purposes of CEQA, the architectural historians evaluated the buildings to determine if any may also have the exceptional design merit exhibited at the library.

Table 1. Campus Facilities Potentially Planned for Alteration, Replacement, or Relocation.

Photo	CSUDH Facility Number(s)	Building Name	Year Built ³
	61	Field House	1971
	70	Pueblo Dominguez 1	1992
	71	Pueblo Dominguez 2	1982
	80	Physical Plant	1969
	81	Physical Plant Shops	1969

³ Dates may differ based on the year that construction commenced versus year of completion. For purposes of this table, all dates provided reflect information found in the CSUDH facilities database or previous CSUDH Master Plan documentation.

	82	Physical Plant Vehicle Maintenance	1969
	83	University Warehouse	1969
	84	Physical Plant Warehouse	1969
	87	Central Plant	1972
	102	South Academic Complex	1991
	103	South Academic Complex	1993

	116	East Academic Complex	2002
	120	Child Development Center	2005
	121	Infant Toddler Center	2005

A review of the potentially impacted buildings indicated that the buildings range in year built from 1969 through 2005, with buildings constructed in each decade between these dates. The buildings do not display architectural merit. They are generally utilitarian in nature and appearance and lack ornamentation. None of the older buildings display character-defining features of the Modernist movement, such as high-quality materials or references to academically accepted mid-century styles such as Neo-Formalism, Brutalism, the International Style, or Expressionism. Because of the multitude of forms and materials used, as well as the very long and drawn out development of the campus, the buildings lack an overall sense of design cohesion or architectural compatibility. A number of buildings are constructed of prefabricated materials and many were intended for temporary use. The South Academic Complex buildings (102, 103) and the East Academic Complex buildings (116) are constructed of prefabricated materials and officially designated as “temporary buildings” on the previously approved Master Plan. Similarly, the Child Development Center (120) and Infant Toddler Center (121) are constructed of prefabricated materials. These buildings were likely intended to be temporary, are easily moved, and are planned to be relocated to other areas on the campus as part of the 2018 Master Plan. The housing complexes, Pueblo Dominguez 1 (70) and Pueblo Dominguez 2 (71) lack architectural significance and appear to have been constructed to respond to a demand for housing at CSUDH.

The remaining buildings do not appear to meet CEQA special considerations for buildings less than fifty years of age. Although some of the buildings date from the first decade of CSUDH’s existence, some have been constructed as recently as thirteen years ago. A visual assessment of the buildings and archival research did not indicate these buildings have achieved significance within the last fifty years and sufficient time has not passed “to obtain a scholarly perspective on the events or individuals associated with the resource.”⁴

⁴ California Office of Historic Preservation, *Technical Assistance Series #1, California Environmental Quality Act (CEQA) and Historical Resources, “Special Considerations”* (2001), 29.

When compared to the Leo F. Cain Library/Educational Resource Center, a campus building that is less than fifty years of age and has achieved significance, these buildings are modest representations of late-1960s/early-1970s utilitarian designs. They were built quickly, economically, and efficiently with minimal design consideration in order to respond to facilities needs of the newly established campus at Dominguez Hills. The buildings are not architecturally significant and do not warrant further evaluation at this time.

Assessment of the 2018 Master Plan's Potential Effects/Impacts on Historical Resources

As described above, there is one historical resource within the project area: the Leo F. Cain Library/Educational Resource Center, which was identified as a historical resource in the EIR for the 2009 Master Plan. The previously identified 7-Eleven Olympic Velodrome is no longer extant and the Small College Complex is not eligible for the CRHR. No other built resources are fifty years of age. Therefore, the effects of the 2018 Master Plan's proposed undertakings on only the Leo F. Cain Library/Educational Resource Center will be evaluated using CEQA criteria.

The CEQA Guidelines for assessing effects are found in the California Code of Regulations, Title 14, Chapter 3. Section 15064.5 states that:

- [a] project with an effect that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment.
- (1) Substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.
- (2) The significance of an historical resource is materially impaired when a project:
 - (A) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or
 - (B) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to §5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of §5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or
 - (C) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

In the vicinity of the Leo F. Cain Library/Educational Resource Center, the 2018 Master Plan proposes the addition of academic buildings to the southeast and southwest of the 2010 library addition. A larger student recreational center is proposed for an area to the south of the 2010 library addition. Additional buildings are proposed at locations that are a substantial distance to the northeast and northwest from the library. East of the library, the 2018 Master Plan proposes developing the currently vacant eastern section of campus into a university village with housing and parking for students and others.

There are no direct effects to the library because all proposed landscape changes and new buildings constructed as part of the 2018 Master Plan will be located outside the library’s historical resource property boundary. Indirect effects, including visual or noise effects, would be minor and located at a substantial distance from the building. Additionally, mature vegetation around the library and existing campus buildings would screen views toward the proposed new buildings. The library’s immediate setting has been altered since the time of its construction due to the construction of the student union building in the 1980s and the rear library addition completed in 2010 (Figure 11); however, these changes are consistent with the original campus master plan that proposed a number of additional campus buildings. The proposed buildings in the 2018 Master Plan are also consistent with the original master plan’s intent to provide additional campus facilities in close proximity to one another. Executing the proposed undertakings in the 2018 Master Plan would have no substantial adverse change in the significance of the library or its immediate surroundings. The library’s significance would not be materially impaired, nor would the physical characteristics of the library that convey its historical significance and that justify its eligibility for inclusion in the CRHR be diminished. The 2018 Master Plan would not change the Leo F. Cain Library’s integrity of location, design, setting, materials, workmanship, feeling, and association. Therefore, the 2018 Master Plan will have **no effect** on the Leo F. Cain Library/Educational Resource Center.

Figure 11. View south toward Leo F. Cain Library and 2010 library addition.

Effects are generally assessed only on properties that are listed in or eligible for listing in the CRHR. However, it is worth noting that the Small College Complex is proposed for replacement as part of the 2018 Master Plan. It is the only built resource more than fifty years of age that would be potentially impacted by the proposed actions in the 2018 Master Plan. Because the Small College Complex is not significant and is therefore not eligible for listing in the CRHR, its replacement would have no substantial adverse change to historic resources for the purposes of CEQA.

All other buildings potentially impacted by proposed relocation, alteration, or replacement (shown in Table 1) are less than fifty years of age, and none have been shown to demonstrate significance. Their

demolition, relocation, or alteration would have no substantial adverse change to historical resources for purposes of CEQA.

Because the 2018 Master Plan would have no effect and no substantial adverse change on the Leo F. Cain Library/Educational Resource Center, which is the only historical resource as defined by CEQA within the study area, the plan would have **no significant impact** on historical resources for purposes of CEQA.

Recommendations

Upon reaching fifty years of age, the campus buildings should be evaluated collectively to determine NRHP and CRHR eligibility. This analysis should be submitted to the California State Historic Preservation Office for concurrence.

Subject: Formal Notification for the California State University Dominguez Hills
2018 Campus Master Plan Project

Dear Mr. Morales:

California State University Dominguez Hills (CSUDH) is undertaking an environmental review process pursuant to the California Environmental Quality Act (CEQA) for a 2018 Campus Master Plan. The main objective of the Campus Master Plan is to reaffirm the CSUDH mission by focusing on the campus facilities needed to increase access to educational opportunity, enhance campus support for student learning, and offer globally relevant academic programs supporting enrollment up to 20,000 full-time equivalent students. The 2018 Campus Master Plan also recognizes changes in public funding that have occurred in recent years and the need to grow the university's financial resources by diversifying and increasing revenue sources. To do so, the Master Plan identifies needed facilities and improvements, including student, staff, and faculty housing; academic facilities; student service and support facilities; a mixed-use University Village; parking facilities, and associated improvements as illustrated in the attached Master Plan conceptual land use map.

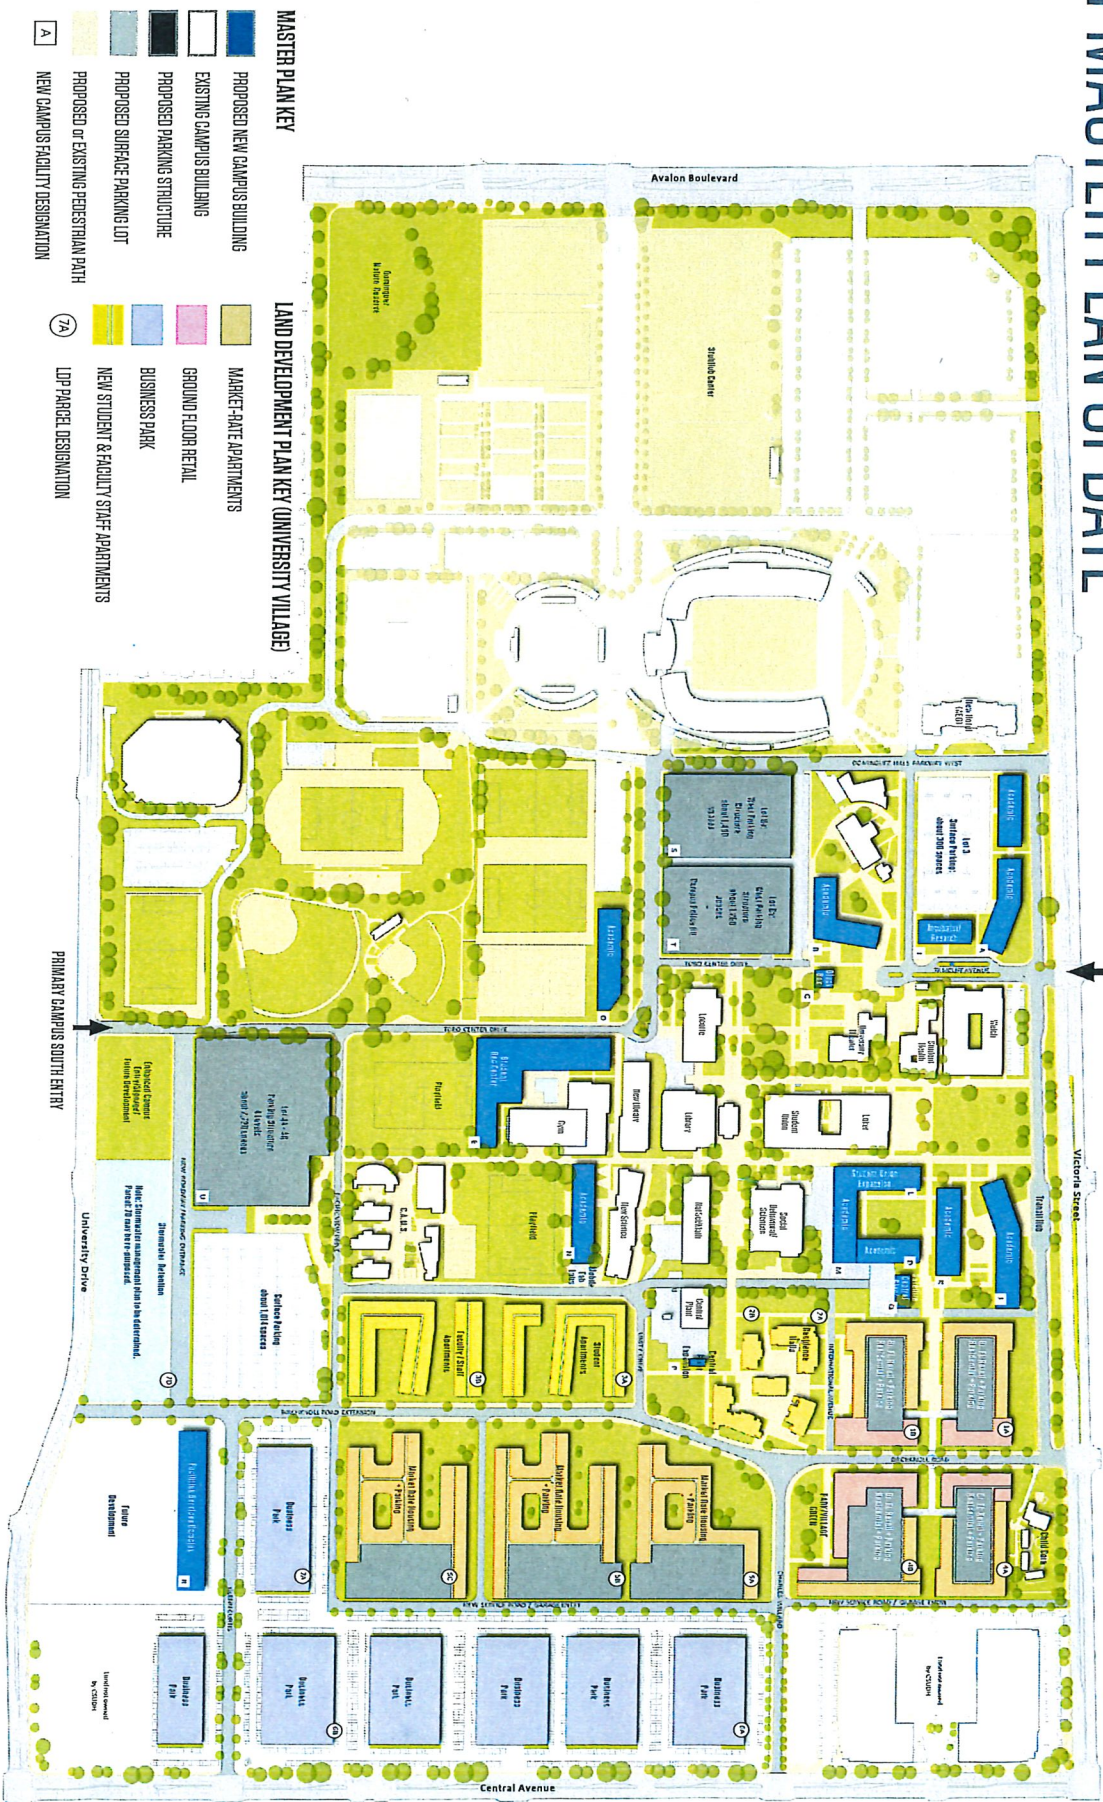

Per your request to be formally notified of proposed projects within the CSUDH jurisdiction that are traditionally and culturally affiliated with the San Gabriel Band of Mission Indians in accordance with Public Resources Code Section 21080.3.1, subd. (b), I am hereby notifying you of the opportunity to consult with the University regarding the potential this project may impact Tribal Cultural Resources, as defined in Section 21074 of the PRC. The purposes of tribal consultation under AB 52 are to determine, as part of the CEQA review process, whether or not Tribal Cultural Resources are present within the project area, and, if so, whether or not those resources will be significantly impacted by the project. If Tribal Cultural Resources may be significantly impacted, then consultation also will help determine the most appropriate way to avoid or mitigate impacts.

In accordance with Section 21080.3.1(b) of the PRC, you have thirty (30) days from date of this letter to request or decline consultation on this project in writing. Please send your written response before June 12, 2017 to Roshni Thomas, Director of Facilities Planning, Design and Construction, CSU, Dominguez Hills, Facilities Services – A058, 1000 E. Victoria Street, Carson, CA 90747. If she does not receive a response provided from you within thirty (30) days, we will proceed with EIR Process for the Campus Master Plan. Thank you and we look forward to your response.

Sincerely,

Naomi Goodwin, Interim
Vice President, Administration and Finance

GABRIELENO TONGVA
SAN GABRIEL BAND OF MISSION INDIANS

December 1, 2016

California State University, Dominguez Hills
1000 E. Victoria Street
Carson, CA 90747

RE: California Environmental Quality Act Public Resources Code section 21080.3, subd. (b) Request for Formal Notification of Proposed Projects Within the San Gabriel Band of Mission Indians Tribe's Geographic Area of Traditional and Cultural Affiliation

CC: Native American Heritage Commission

To whom it may concern:

As of the date of this letter, in accordance with Public Resources Code Section 21080.3.1, subd. (b), San Gabriel Band of Mission Indians, which is traditionally and culturally affiliated with a geographic area within your agency's geographic area of jurisdiction, requests formal notice of, and information on, proposed projects for which your agency will serve as a lead agency under the California Environmental Quality Act (CEQA), Public Resources Code section 21000 et seq. Pursuant to Public Resources Code section 21080.3.1, subd. (b), and until further notice, we hereby designate the following person as the tribe's lead contact person for purposes of receiving notices of proposed projects from your agency:

San Gabriel Band of Mission Indians
Anthony Morales, Chief
P. O. Box 693
San Gabriel, CA 91778
Fax: (626) 286-1262
Phone: (626) 483-3564
GTTribalcouncil@aol.com

We request that all notices be sent via certified U.S. Mail with return receipt. Following receipt and review of the information your agency provides, within the 30-day period prescribed by Public Resources Code section 21080.3.1, subd. (d), the San Gabriel Band of Mission Indians may request consultation, as defined by Public Resources Code section 21080.3.1, subd. (b), pursuant to Public Resources Code section 21080.3.2 to mitigate any project impacts a specific project may cause to tribal cultural resources.

If you have any questions or need additional information, please contact our lead contact person listed above.

Sincerely,

Anthony Morales
San Gabriel Band of Mission Indians
Chief

GABRIELENO TONGVA
SAN GABRIEL BAND
OF MISSION INDIANS

October 15, 2016

To Whom It May Concern,

I am sending this letter on behalf of the **Morales family of the San Gabriel Band of Mission Indians** to help facilitate communication regarding the Gabrieleno cultural resources and archaeological studies. The San Gabriel Band of Mission Indians gained recognition from the state of California in 1994 as an indigenous tribe within the Los Angeles basin (California Legislature Assembly Joint Resolution No. 96, adopted in Senate August 11, 1994). The Morales family has been an active participant in the preservation of Gabrieleno tribal resources since the early 1970s. As early as 1978, the Native American Heritage Commission identified the Morales family as important Tribal Leaders in Southern California for their tenacious efforts to preserve Gabrieleno cultural resources. Today, the Morales family continues to help preserve their culture through a new partnership with Scientific Resource Surveys, Inc (SRSINC).

SRSINC is recognized as the oldest Cultural Resource Management (CRM) firm in Southern California, if not the United States. For over 43 years, SRSINC has worked side-by-side with the Gabrieleno in the Los Angeles basin to provide support to the Southern California building industry. SRSINC was formed in 1973 (incorporated in 1977) and currently operates as a California and Alaska Small Business, UDBE, DBE, and Woman-owned Corporation out of Orange County, California. As an equal opportunity employer, SRSINC employs a diverse staff of specialists to conduct archaeological, ethnographic, historic, and paleontological studies throughout Southern California. SRSINC is more than a Cultural Resource Management firm; it is a consortium of very talented scientists, artists, and support staff who have worked for decades in the fields of **Archaeology, History, Ethnography, Genealogy, Archival Research, Museum Displays, Graphic Arts, Paleontology, Zoology, Bioarchaeology and Forensic Sciences**. Each person has his/her own exceptional skills, which together, overlap and intertwine to form a cohesive team.

The San Gabriel Band of Mission Indians have united with SRSINC to facilitate seamless interaction between developers and the tribe, as dictated by the new CRM laws. The most recent changes to state statutes were put into effect in 2015. Assembly Bill No. 52 (AB-52) was passed late-2014 to amend the current policy surrounding Native American resources. The implementation of AB-52 mandates tribal consultation and emphasizes tribal knowledge during CEQA review. Additionally, AB-52 has broadened the definition of what constitutes as a cultural resource. Previously, a cultural resource was reserved to archaeological and historical objects and buildings. AB-52 has coined a new term, Tribal Cultural Resources (TCR), to be more inclusive of culturally valued resources, whether they be tangible objects or conceptual. The enactment of AB-52 has placed a new emphasis on collaboration with tribal governments to help understand how indigenous populations used, and continue to use, local landscapes.

The San Gabriel Band of Mission Indians have requested to be consulted for all developments located within the Los Angeles Basin. As a partner and qualified expert, SRSINC can provide the required information to help save time and money. **By working together, we can help you navigate through your legal obligations and facilitate all of your cultural resource management needs for the Los Angeles basin.** Please feel free to contact SRSINC's tribal liaison, Kassie Sugimoto, for additional information or with any questions. We look forward to working with you in the near future.

Mr. Fred Morales
Gabrieleno/Tongva Tribal Council

211 East Main Street
San Gabriel, CA 91776

Dear Mr. Morales:

As you know, the State of California Native American Heritage Commission was created by AB 4239 in 1976 and the Commission began its work January 1, 1977 with new authority codified in Public Resources Code Section 5097. 9.

You have been identified as an important Tribal Leader in Southern California. The Commission looks forward to working with you and Tribal Elders as it makes plans and services to protect California Native American burial sites and artifacts associated with burials. The Commission is also concerned about development activities that might threaten Native American sacred sites.

Please feel free to contact me with your concerns and your suggestions that will make the work of the Commission effective in cooperation with California Native American Tribes.

Sincerely,

A handwritten signature in cursive script that reads "Steve Rios".

Assembly

RESOLUTION

By Assembly Members Diane Martinez, Barbara Alby, Doris Allen, Dede Alpert, Marguerite Archie-Hudson, Joe Baca, Julie Bornstein, Vivien Bronshvag, Valerie Brown, John Burton, Cruz M. Bustamante, Sal Cannella, Dominic L. Cortese, Denise Moreno Ducheny, Delsine Eastin, Bob Epple, Martha M. Escutia, Robert Frazier, Jerry Friedman, Jan Goldsmith, Mike Golch, Tom Hannigan, Irice Harvey, Dan Hauser, Paul V. Horcher, Betty Karnette, Richard Katz, Barbara Lee, Juanita McDonald, Gwen Moore, Bill Morrow, Richard Mountjoy, Willard Murray, Grace F. Napolitano, Richard Pelaez, Charles W. Quickerbush, James Rogan, Andrea Sraustrand, Margaret E. Snyder, Hilda L. Solis, Nao Takasugi, Tom Umberg, and Ted Weggeland; Relative to

The Gabrielinos

Whereas, Gabrielino tribal territory encompasses the entire Los Angeles Basin area and the Channel Islands of Santa Catalina, San Nicholas, and San Clemente; and

Whereas, The Gabrielino were, at one time, one of the most prosperous and generous Native American tribes of southern California. Long before European contact, the Gabrielinos already had a major society in place with a government, laws, religion, music, dance, art, a monetary system, and cultural exchange; and

Whereas, The State of California has had consistent interaction with the Gabrielinos, known originally as the San Gabriel Band of Mission Indians; and

Whereas, The State of California recognizes that the Gabrielino Indian community existed and has continued to exist without interruption to the present day; and

Whereas, The State of California recognizes that the Gabrielinos have held general membership meetings in the San Gabriel, California region for over 100 years; and

Whereas, The State of California recognizes that Gabrielino members participate consistently in tribal affairs; now, therefore, be it

Resolved by THE ASSEMBLY AND SENATE OF THE STATE OF CALIFORNIA, JOINTLY, That the State of California recognizes the Gabrielinos as the aboriginal tribe of the Los Angeles Basin and takes great pride in recognizing the Indian inhabitation of the Los Angeles Basin and the continued existence of the Indian community within our state; and be it further

Resolved, That the California Legislature respectfully memorializes the President and Congress of the United States to likewise give recognition to the Gabrielinos as the aboriginal tribe of the Los Angeles Basin; and be it further

Resolved, That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to each Senator and Representative from California in the Congress of the United States.

Assembly Joint Resolution No. 96
Adopted in Assembly August 11, 1994

Signed:

Willie L. Brown, Jr.
Speaker of the Assembly

Attest:

Dotsch Wilson
Chief Clerk of the Assembly

Adopted in Senate August 31, 1994

Signed:

Leo T. McCarthy
President of the Senate

Appendix E. Noise

E.1 Noise Analysis Technical Report

Noise Analysis Technical Report

Campus Master Plan 2018, California State University, Dominguez Hills, Carson California

Scope and Noise Study Methods

This section describes the analysis and change in traffic noise levels to noise sensitive land uses, around the California State University Dominguez Hills (CSUDH) campus, due to the 2018 Campus Master Plan.

Federal Highway Traffic Noise Model (TNM 2.5), which computes highway traffic noise at nearby receivers, was used to calculate the existing and future peak hour noise levels for both the AM and PM peak hours.

Noise Measurement and Reporting

Sound levels are expressed on a logarithmic scale of decibels (abbreviated as dB), in which a change of 10 units on the decibel scale reflects a 10-fold increase in sound energy. A 10-fold increase in sound energy roughly translates to a doubling of perceived loudness.

Sound occurs over a wide range of frequencies. However, not all frequencies are detectable by the human ear; therefore, an adjustment is made to the high and low frequencies to approximate the way an average person hears traffic sounds. This adjustment is called A-weighting and is expressed as “dBA.” People commonly judge the relative magnitude of sound sensation using subjective terms such as “loudness” or “noisiness.” A change in sound level of 3 dBA is considered barely perceptible, a change in sound level of 5 dBA is considered readily perceptible, and an upward change of 10 dBA is recognized as twice as loud. Examples of typical noise levels for common indoor and outdoor activities are depicted in Table 1.

Community decibel levels are reported as both Community Equivalent Noise Levels (dBA, CNEL) and Leq (h) dBA. The CNEL is a 24-hour weighted noise average with 5 dBA adjustment upward added to the sound levels that occur during evening hours and 10 dBA add to nighttime hours, the penalties are intended to account for greater sensitivity to noise during these hours. The equivalent sound level “Leq” is also referred to as the time-average sound level. Leq can be used to represent the average of equivalent sound level for noise generated by traffic given that traffic sound levels are never constant due to the changing number, type and speed of vehicles.

For the purpose of the project, analyses were conducted using both CNEL and Leq approaches. The CNEL analyses were conducted for weekday conditions because the Master Plan would generate traffic through the day. The CNEL would be an appropriate approach which would account for the overall impacts of the developments. In addition, Leq analyses were also conducted specifically for Sunday conditions to determine the noise impacts during events periods at the StubHub Center. Because sporting or entertainment events typically occur during a few hours of the day, the use of Leq would better account for the surge in traffic and the associated noise, and would thus provide a more conservative analysis in this context.

Table 1. Common Sound/Noise Levels

Common Sound/Noise Levels		
Outdoor	dB(A)	Indoor
Air horn	110	Rock/Blues Band
Jet Flyover at 1000 feet		Baby Crying
Leaf Blower	100	Subway
Gas Weed Eater	90	Fire Alarms
Riding Lawn Mower		Blender
Gas Edger		Crowded Restaurant
Police Whistle	80	Disposal at 3 feet
Air Conditioner Compressor		Shouting at 3 feet
	70	
		Normal Conversation at 3 feet
Normal Conversation at 3 feet	60	Clothes Dryer at 3 feet
Babbling Brook		Large Business Office
Quiet Urban (daytime)	50	Refrigerator
Quiet Urban (nighttime)	40	Quiet Office/Library
Wilderness	30	
	20	Recording Studio
	10	Threshold of Hearing

Noise Sensitive Receptors

Different land uses have different sensitivity to noise. Gas stations and store fronts/parking areas are not sensitive to noise as are schools and residential areas. Since schools will not be in session on Sundays, only the residential communities, which are located near the campus and on the roadway to carry the traffic to and from the games were studied for this project.

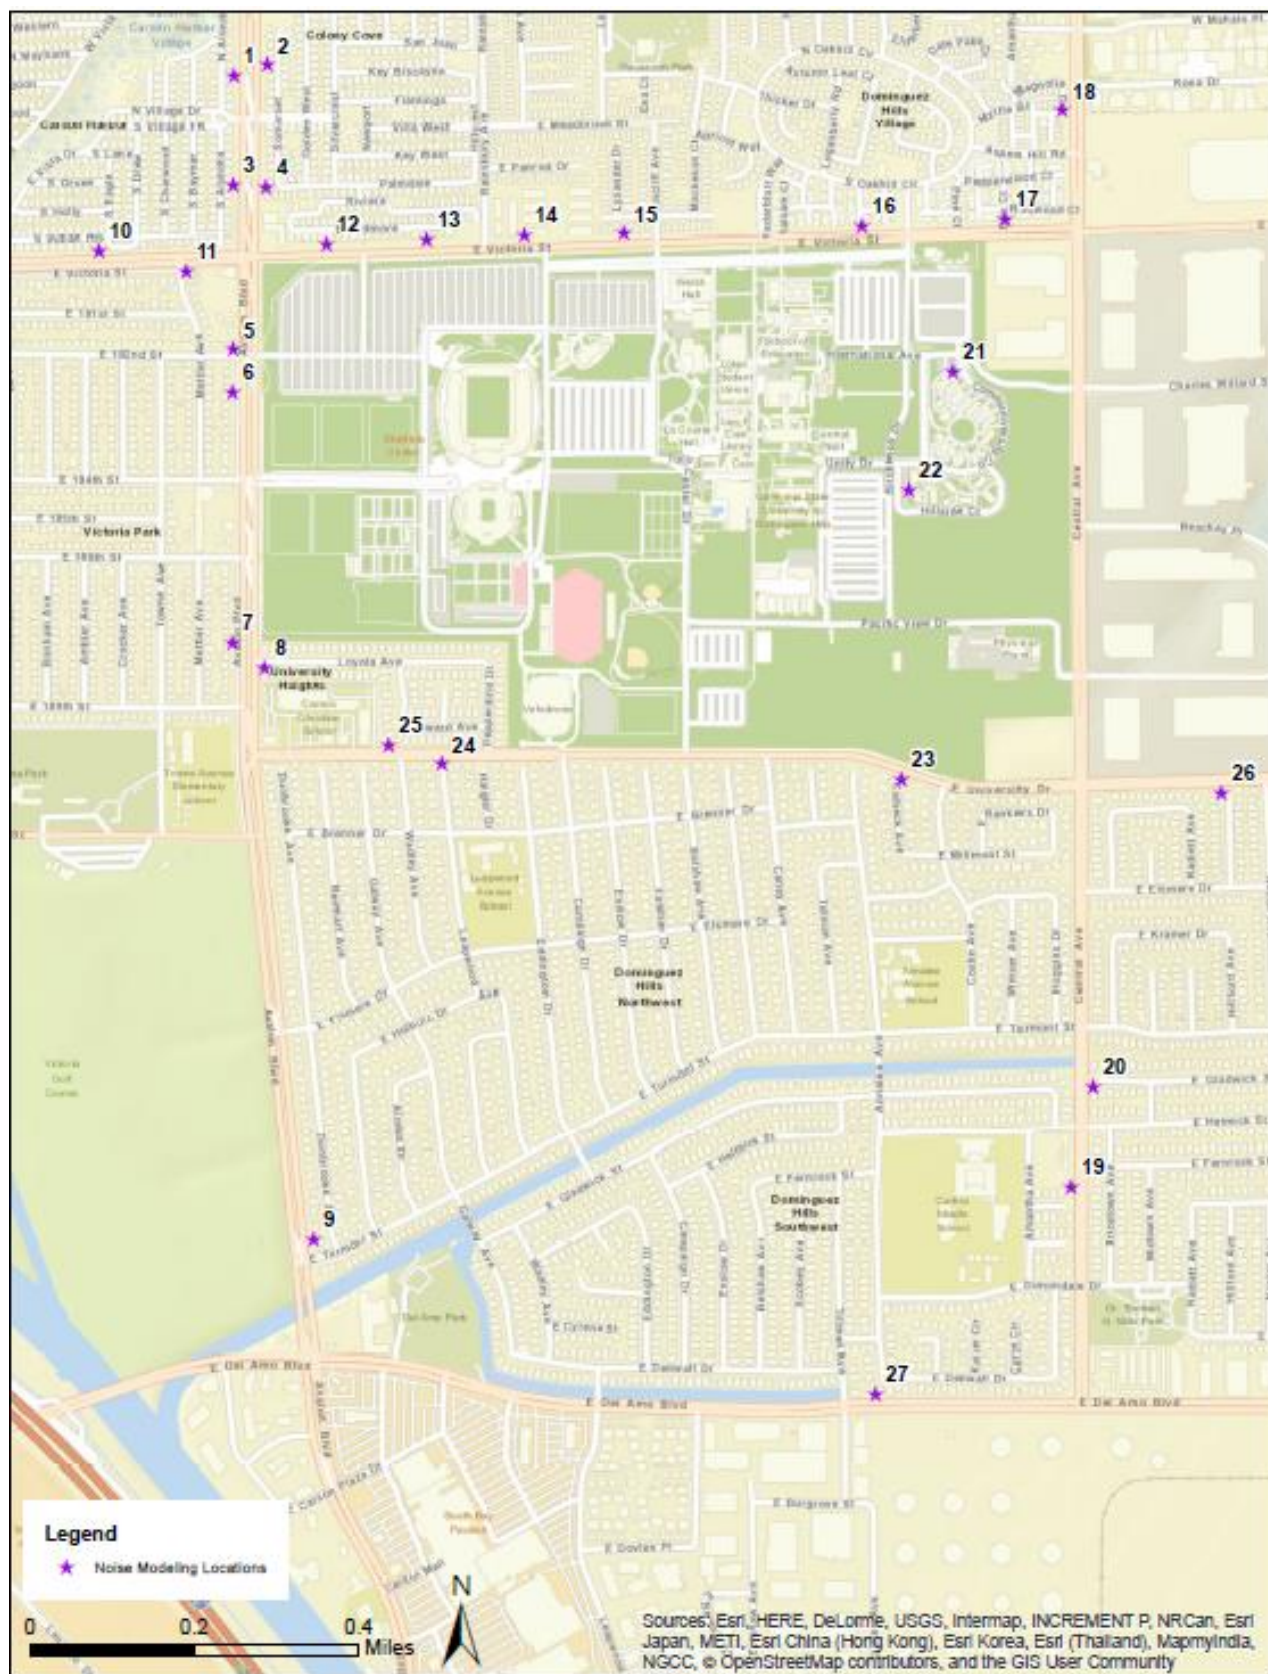

For this study, noise levels were modeled at 27 sites. The 27 receptor sites are near parking lots and along roadway links could be affected by the increase in traffic, before and after the Sunday games.

Table 2, lists the site number, roadway, side of the roadway, to and from cross streets for each receptor site. The locations are shown in Figure 1.

Figure 1. Modeled Noise Sensitive Receptors

Existing Noise Levels

The existing weekday peak hour noise levels were calculated in TNM 2.5 using the traffic from Exhibit 17 in the Transportation Impact Study, Campus Master Plan 2018, prepared by WSP, November 2017.

Future Traffic Noise Levels

The future 2035 No Project weekday peak hour noise levels were calculated in TNM 2.5 using the traffic from Exhibit 75 in the Transportation Impact Study, Campus Master Plan 2018, prepared by WSP, November 2017.

The future 2035 Project weekday peak hour noise levels were calculated in TNM 2.5 using the traffic from Exhibit 75 in the Transportation Impact Study, Campus Master Plan 2018, prepared by WSP, November 2017.

Criteria for Determination of a Significant Impact

The City of Carson (Chapter 3 of the General Plan) specifies that the standards for exterior noise levels at residential locations should not exceed a CNEL of 65 dBA while the interior levels should not exceed CNEL of 45 dBA. This exterior noise level also falls within the range of acceptable conditions (55 to 70 dBA) set by the California Department of Health Services. In addition, the City's Noise Ordinance provides various measures to reduce nuisance noise from construction projects, including the requirement to limit construction activities near residential units, and employing feasible and practical techniques that minimize the noise impact to adjacent uses.

The Federal Interagency Committee on Noise (FICON) had established significance criteria for noise impacts using a sliding scale based on the existing Ldn noise levels. The Ldn is a 24-hour average noise level with 10 decibel penalty added to the night period from 10:00 p.m. to 7:00 a.m. The level of significance under the criteria changes with increasing noise exposure, such that smaller changes in ambient noise levels result in significant impacts at higher existing noise levels. These criteria are shown in Table 3.

Table 3. Noise Impact Significance Criteria

Existing Ldn	Significant Impact
Below 60 dBA	+5.0 dBA or more
60 - 65 dBA	+3.0 dBA or more
Above 65 dBA	+1.5 dBA or more

Source: FICON - Federal Government's Method of Assessing Noise Impacts

For the proposed project's operational impacts, a significant noise impact would result if:

- The existing noise level is in excess of 65 dBA and the proposed project adds 1.5 dBA or more to the existing condition; or,
- The existing noise level is between 60 to 65 dBA and the proposed project adds 3.0 dBA or more to the existing condition, and thereby results in a noise level exceeding 65 dBA; or,
- The existing noise level is below 60 dBA and the proposed project adds 5.0 dBA or more to the existing condition, and thereby results in a noise level exceeding 65 dBA.

For short-term construction impacts, a significant noise impact would result if noise from construction activities associated with the proposed project resulting in noise levels in excess of 65 dBA between the hours of 7:00 a.m. and 8:00 p.m. daily (except Sundays), or if noise from construction activities exceeds 55 dBA between the hours of 8:00 p.m. and 7:00 a.m. daily (except Sundays).

Project Impact

Long-Term Operational

The weekday noise analyses were conducted using the CNEL method, and the results are summarized in Table 4, and illustrated in Figure 2 and Figure 3. As shown, under the Buildout Year 2035 With Project conditions, the project-related increase in noise levels at the receptor sites range from 0.2 to 3.0 dBA. Under the Buildout Year 2035 With Project conditions, eight receptor sites were projected to experience noise levels above 65 dBA. Analysis shows that two of the eight receptor sites would exceed the significance threshold, resulting in significant project-related noise impacts:

- Site #14 WB Victoria St – Existing noise level above 65 dBA, with project-related increase of 1.6 dBA.
- Site #23 WB University Dr – Existing noise level between 60 dBA and 65 dBA, with project-related increase of 3.0 dBA.

The remaining six of the eight receptor sites with projected noise levels of above 65 dBA would not be considered to have significant project-related impact. This is because the project-related contributions to the increases in the noise levels would not exceed the significance threshold.

Cumulative Impacts

Off-site operational noise sources would consist primarily of vehicle trips along adjacent streets. The increase in traffic volumes from other projects and overall growth was accounted for in the traffic analysis and noise analysis for Buildout Year 2035. As shown in Table 4, the proposed project, together with overall growth of the area, would contribute to the increase in noise levels at eight of the receptor sites that were projected to have noise levels beyond the 65 dBA threshold for residential homes. Analysis shows that eight receptor sites would exceed the significance threshold, resulting in significant cumulative noise impacts:

- Site #5 SB Avalon Blvd – Existing noise level above 65 dBA, with cumulative increase of 2.2 dBA.
- Site #6 SB Avalon Blvd – Existing noise level above 65 dBA, with cumulative increase of 2.2 dBA.
- Site #7 SB Avalon Blvd – Existing noise level above 65 dBA, with cumulative increase of 2.2 dBA.
- Site #8 NB Avalon Blvd – Existing noise level above 65 dBA, with cumulative increase of 2.4 dBA.
- Site #11 EB Victoria St – Existing noise level between 60 dBA and 65 dBA, with cumulative increase of 3.8 dBA.
- Site #14 WB Victoria St – Existing noise level above 65 dBA, with cumulative increase of 4.8 dBA.

- Site #19 SB Central Ave – Existing noise level above 65 dBA, with cumulative increase of 1.5 dBA.
- Site #23 WB University Dr – Existing noise level between 60 dBA and 65 dBA, with cumulative increase of 3.4 dBA.

Table 4. Weekday Project Noise Impact Buildout Year 2035

Site	CNEL dBA			Change in dBA		Significant Impact?

Figure 2. Project-Related Change in Weekday Noise Levels

Figure 3. Cumulative change in Weekday Noise Level

Sunday Event Noise

The traffic-related noise analyses are based on the Transportation Impact Study which addresses the effects of the change from 27,000 spectators to 30,000 spectators attending Sunday sporting events at the stadium at the StubHub Center. As shown in Tables 5 and 6, with the implementation of temporary traffic controls described in the Transportation Impact Study, no significant traffic noise impact will result at any of the 27 receptor sites under both Existing and Year 2019 conditions. The largest increases in traffic noise levels are at the receptor site 19 with an increase of 2.3 dBA in the pre-event hour and site 20 with an increase of 1.3 dBA in the pre-event hour under Existing Conditions, and site 4 with an increase of 1.2 dBA in the pre-event hour under Year 2019 Conditions. Noise level increases at all of the other 24 sites are less than 1 dBA in both pre-game and post-game hours under Existing Conditions and under Year 2019 Conditions. Therefore, the change in noise levels between 27,000 spectators and 30,000 spectators attending Sunday events would not result in a significant traffic noise impact from the event-related traffic.

Table 5. Change in Noise Levels between 27,000 and 30,000 Spectators (Existing Sunday Pre- and Post-Event Hours)

Site Number	Pre-Event (27,000)	Pre-Event (30,000)	Change in Pre-Event Leq (h)	Post Event (27,000)	Post Event (30,000)	Change in Post Event Leq (h)	Significant Impact?

E.2 Noise Analysis Technical Report – Increased Student Housing Alternative

Noise Analysis Technical Report

For Increased Student Housing Alternative

Campus Master Plan 2018, California State University, Dominguez Hills, Carson, California

Scope and Noise Study Methods

This memorandum summarizes the methodology and results of the traffic noise analysis conducted for the Increased Student Housing Alternative for the California State University, Dominguez Hills (CSUDH or University) Master Plan 2018 EIR. This alternative would add 500 student beds and convert 180 market-rate apartment dwelling units to student housing units, adding another 540 beds, for a total of 1,040 additional student beds over the Proposed Project. With the conversion, the total number of market-rate apartments would be reduced by 180 dwelling units compared to the Proposed Project. All other project elements would remain the same between the Proposed Project and Increased Student Housing Alternative.

The noise analysis was conducted for both the AM and PM peak hours using the Federal Highway Administration (FHWA) Traffic Noise Model (TNM 2.5), which computes highway traffic noise at nearby receivers. This memorandum summarizes the results of the traffic noise analysis for the 2035 With Increased Student Housing Alternative.

Noise Measurement and Reporting

Sound levels are expressed on a logarithmic scale of decibels (abbreviated as dB), in which a change of 10 units on the decibel scale reflects a 10-fold increase in sound energy. A 10-fold increase in sound energy roughly translates to a doubling of perceived loudness.

Sound occurs over a wide range of frequencies. However, not all frequencies are detectable by the human ear; therefore, an adjustment is made to the high and low frequencies to approximate the way an average person hears traffic sounds. This adjustment is called A-weighting and is expressed as “dBA.” People commonly judge the relative magnitude of sound sensation using subjective terms such as “loudness” or “noisiness.” A change in sound level of 3 dBA is considered barely perceptible, a change in sound level of 5 dBA is considered readily perceptible, and an upward change of 10 dBA is recognized as twice as loud. Examples of typical noise levels for common indoor and outdoor activities are depicted in Table 1.

Community decibel levels are reported as both Community Equivalent Noise Levels (dBA, CNEL) and Leq (h) dBA. The CNEL is a 24-hour weighted noise average with 5 dBA adjustment upward added to the sound levels that occur during evening hours and 10 dBA add to nighttime hours, the penalties are intended to account for greater sensitivity to noise during these hours. The equivalent sound level “Leq” is also referred to as the time-average sound level. Leq can be used to represent the average of equivalent sound level for noise generated by traffic given that traffic sound levels are never constant due to the changing number, type and speed of vehicles.

For the purpose of analyzing this project alternative, analyses were conducted using the CNEL approach. The CNEL analyses were conducted for weekday conditions because the Master Plan would generate traffic through the day. The CNEL would be an appropriate approach, which would account for the overall impacts of project buildout.

Figure 1. Modeled Noise Sensitive Receptors

Source: ESRI, 2018; WSP, 2018

Existing Noise Levels

The existing weekday peak hour noise levels were calculated in TNM 2.5 using the traffic volumes from Exhibit 17 in the Transportation Impact Study (TIS), Campus Master Plan 2018, prepared by WSP, November 2018. The results of the noise modeling at the 27 receptor sites indicate that in the existing noise levels in the project vicinity range from 51.4 to 68.6 dBA (shown in Table 4).

Future Traffic Noise Levels

The 2035 No Build weekday peak hour noise levels were calculated in TNM 2.5 using the traffic volumes from Exhibit 75 in the TIS. As documented in the TIS, the 2035 No Build traffic volumes were derived by factoring up existing conditions traffic volumes using growth factors from the Los Angeles County Congestion Management Program (CMP), plus addition of traffic associated with development projects that are in the City of Carson's pipeline. The analysis results indicate that under the 2035 No Build scenario, noise levels in the project vicinity range from 52.9 to 70.1 dBA (shown in Table 4).

The 2035 With Increased Student Housing Alternative weekday peak hour noise levels were calculated in TNM 2.5 using the traffic volumes from Exhibit 75 in the TIS. The analysis results indicate that under the 2035 With Increased Student Housing Alternative, noise levels in the project vicinity would range from 55.5 to 71.1 dBA (shown in Table 4).

Criteria for Determination of a Significant Impact

The City of Carson (Chapter 3 of the General Plan) specifies that exterior noise levels at residential locations should not exceed a CNEL of 65 dBA, while the interior levels should not exceed CNEL of 45 dBA. This exterior noise level also falls within the range of acceptable conditions (55 to 70 dBA) set by the California Department of Health Services. In addition, the City's Noise Ordinance provides various measures to reduce nuisance noise from construction projects, including the requirement to limit construction activities near residential units, and employing feasible and practical techniques that minimize the noise impact to adjacent uses.

The Federal Interagency Committee on Noise (FICON) has established significance criteria for noise impacts using a sliding scale based on the existing Ldn noise levels. The Ldn is a 24-hour average noise level with 10 decibel penalty added to the night period from 10:00 p.m. to 7:00 a.m. The level of significance under the criteria changes with increasing noise exposure, such that smaller changes in ambient noise levels result in significant impacts at higher existing noise levels. These criteria are shown in Table 3.

Table 3. Noise Impact Significance Criteria

Existing Ldn	Significant Impact
Below 60 dBA	+5.0 dBA or more
60 - 65 dBA	+3.0 dBA or more
Above 65 dBA	+1.5 dBA or more

Source: FICON - Federal Government's Method of Assessing Noise Impacts

A significant operational noise impact would result if:

- The existing noise level is in excess of 65 dBA and the proposed project adds 1.5 dBA or more to the existing condition; or,

- The existing noise level is between 60 to 65 dBA and the proposed project adds 3.0 dBA or more to the existing condition, and thereby results in a noise level exceeding 65 dBA; or,
- The existing noise level is below 60 dBA and the proposed project adds 5.0 dBA or more to the existing condition, and thereby results in a noise level exceeding 65 dBA.

Impact Analysis

Long-Term Operational

The weekday noise analyses were conducted using the CNEL method, and the results are summarized in Table 4. As shown, under the 2035 With Increased Student Housing Alternative conditions, the increase in noise levels at the receptor sites range from 0.0 to 2.9 dBA. Under this scenario, eight receptor sites were projected to experience noise levels above 65 dBA. However, none of the eight receptor sites with projected noise levels above 65 dBA would increase the noise levels above the significance threshold. Therefore, under the Increased Student Housing Alternative, no significant long-term operational noise impact would occur.

Compare to the Proposed Project, the Increased Student Housing Alternative would significantly increase the number of student beds on campus. This would result in the increase of short distance trips generated by the alternative, but this increase is offset by the reductions in long distance student commuting trips that would have otherwise occurred without the additional student housing. As a result, the Increased Student Housing Alternative would reduce the noise impact at the two receptor locations (Sites 14 and 23) to a less than significant level.

Cumulative Impacts

Off-site operational noise sources would consist primarily of vehicle trips along adjacent streets. The increase in traffic volumes from other projects and overall growth was accounted for in the traffic analysis and noise analysis for 2035 With Increased Student Housing Alternative conditions. As shown in

Table 4, the proposed alternative, together with overall growth of the area, would contribute to the increase in noise levels at eight of the receptor sites that were projected to have noise levels beyond the 65 dBA threshold for residential homes. Similar to the conditions under the Proposed Project, analysis shows that the eight receptor sites would exceed the significance threshold, resulting in significant cumulative noise impacts:

- Site #5 SB Avalon Blvd – Existing noise level above 65 dBA, with cumulative increase of 2.6 dBA.
- Site #6 SB Avalon Blvd – Existing noise level above 65 dBA, with cumulative increase of 2.6 dBA.
- Site #7 SB Avalon Blvd – Existing noise level above 65 dBA, with cumulative increase of 2.6 dBA.
- Site #8 NB Avalon Blvd – Existing noise level above 65 dBA, with cumulative increase of 2.5 dBA.
- Site #11 EB Victoria St – Existing noise level between 60 dBA and 65 dBA, with cumulative increase of 4.1 dBA.
- Site #14 WB Victoria St – Existing noise level above 65 dBA, with cumulative increase of 3.9 dBA.
- Site #19 SB Central Ave – Existing noise level above 65 dBA, with cumulative increase of 1.5 dBA.
- Site #23 WB University Dr – Existing noise level between 60 dBA and 65 dBA, with cumulative increase of 3.3 dBA.

Conclusion

Based on the analysis, the Increased Student Housing Alternative would have a positive effect on the reduction of traffic noise levels by the Project. Under the 2035 With Increased Student Housing Alternative, there would be no significant project-related noise impact. The alternative would reduce the traffic noise to a less than significant level at the two receptor locations (Sites 14 and 23) that were identified as significant under the Proposed Project.

The Increased Student Housing Alternative would, however, have identical cumulative noise impacts as compared to the Proposed Project. The alternative would contribute to significant cumulative noise impacts at the same eight receptor locations.

F.1 Transportation Impact Study

Transportation Impact Study

2018 Campus Master Plan

California State University, Dominguez Hills

February 2019

Executive Summary

This report describes the analysis of the transportation effects of the 2018 Master Plan for California State University Dominguez Hills (CSUDH). The Project consists of three major components¹ (in planned order of completion): 1) An additional 3,000 seats for StubHub Center to be completed by 2018 for use for Sunday afternoon events, 2) a University Village consisting of business park, retail, and market-rate apartment uses to be partially completed by 2025, and 3) upgrading the academic buildings to accommodate up to 20,000 full-time equivalent students and build-out of the University Village to be completed by 2035. The analyses found that:

- In 2019 the Project, consisting at that point of the additional 3,000 seats at StubHub Center, would have no significant traffic impacts on study intersections, freeways, pedestrians, bicyclists, or transit. The roadways have sufficient unused capacity on Sunday afternoons to accommodate the Project traffic provided that temporary traffic controls are in place as planned.
- In 2025 the Project, consisting of a part of the University Village and an increase to 13,287 full-time equivalent students, would have significant traffic impacts on 6 study intersections during weekday AM peak hours and on 9 study intersections during weekday PM peak hours. The project would have one freeway impact on the segment of SR-91 east of Alameda St./Santa Fe Ave. The Project would have no significant impacts on pedestrians, bicyclists, or transit.
- Upon full build-out of the Project in 2035, it would have significant traffic impacts on 12 study intersections during weekday AM peak hours, and on 16 study intersections during weekday PM peak hours. In addition, the Project would have 3 significant traffic impacts on study freeway segments during weekday AM peak hours, and 9 significant impacts during weekday PM peak hours. The Project would have no significant impacts on pedestrians, bicyclists, or transit.

On Sundays, the Project would have significant traffic impacts on 3 study intersections during the Sunday pre-game and 1 intersection during the post-game peak hour. The Project would have no significant traffic impacts on freeways, pedestrians, bicyclists, or transit on Sunday afternoons.

The impacts described above were found using intentionally conservative assumptions², so the actual impacts of the Project may be less than those described in this report.

The final chapter of this report identifies measure that would mitigate the traffic impacts to less-than-significant.

¹ See Chapter 5 for a more complete description of the Project.

² “Conservative” in the sense that the assumptions are more likely to overestimate impacts rather than under-estimate them.

1 Introduction

1.1 Background

CSUDH, founded in 1960 as South Bay State College, moved to its current campus in Carson in 1966, the same year that the school was incorporated into the CSU system. The first Campus Master Plan for the University was completed in 1967. The plan envisioned 20,000 FTE student enrollments on the 344-acre campus, with build-out envisioned by 2002. In terms of transportation, the key features of the plan were:

- A cruciform academic core with major north-south and east-west pedestrian corridors
- Multi-level pedestrian paths as a way to deal with the sloping site of the campus
- On-campus housing for 5,000 students to be located as extensions to the east, west, and south axes and connected to the academic core via major walkways
- 10,000 parking spaces situated in 10 surface lots along the periphery of the campus with multiple access points to city streets
- An internal ring road connecting the parking lots
- To maintain pedestrian friendliness, no vehicular paths were to cross the core, even for service vehicles. Cul-du-sac service roads extending from the ring road to provide load access to buildings in the core.

As of 2016, the 1967 master plan is about half built out, with current enrollment at about 11,100 FTEs. The north-south axes of the academic core have been developed but not the east-west axes. Student housing has been developed on the east side only. Two of the 10 originally-planned parking lots have been built, along with 5 lots on sites originally planned for other uses, for a combined total of 4,533 parking spaces. The original ring road was not completed, but there are internal roads that make a complete circuit around the academic core without crossing it as envisaged in the 1967 Master Plan.

In 2002 the campus signed a long-term land lease with the Anschutz Development Company to develop StubHub Center national soccer training facility on 85 acres of land on the western side of campus. Under the current cooperative arrangement StubHub Center is both a user and supplier of CSUDH parking spaces, with some spaces shared depending on what activities are taking place on a given day.

With the passage of time and the re-purposing of the western portion of the campus, the 1967 Campus Master Plan has become seriously outdated. In 2009 a new Campus Master Plan was completed that kept the goal of accommodating 20,000 FTE students while changing the original plan in several important ways, including:

- Densifying the academic core by using 4-to-5 story buildings instead of the 2-to-3 story buildings originally envisaged
- Extending the academic core eastward by building three new quadrangles on what are currently Parking Lots 2 and 5, and on the vacant area between the academic core and student housing
- Locating new student housing on the east side of campus south and east of the existing residence halls on sites originally planned for surface parking lots
- Providing faculty/staff housing on the south side of campus on a site originally planned for student housing
- Serving most campus parking needs through three parking structures rather than surface lots

- Extending the pedestrian paths for better coverage outside of the academic core

Further evolution of the University's operating environment is prompting an update of the 2009 Master Plan.

1.2 Purpose and Scope of this Study

The purpose of this Transportation Impact Study (TIS) is to evaluate potential off-site traffic and transportation impacts associated with the implementation of the 2018 California State University Dominguez Hills Campus Master Plan "the Project" (a more detailed description is provided in Section 5.1 "Project Description").

This TIS focuses on the area in the vicinity of the university campus and on the routes that vehicles going to or from the site will take on the City of Carson public street network and on the regional freeway system. Forty-two (42) study intersections were selected based on the projected distribution of university- and StubHub center-related traffic. They are shown in Exhibit 1 and listed in Exhibit 2.

The intersections selected for the weekday analysis were:

- Access points to the campus
- Along major routes between the campus and nearby freeway ramps
- Where cross roads have a functional classification of collector or higher
- Congestion Management Plan (CMP) Arterial monitoring stations (Exhibit 3) that may be affected by Project traffic.

For Sunday Analysis selection criteria includes:

- Access point to the parking lots used by StubHub Center
- Along major routes between the campus parking lots used by StubHub Center and nearby freeway ramps
- Entry points to nearby neighborhoods that could be impacted by a Sunday game

In addition, 8 CMP freeway monitoring segments were selected for study based on the expected distribution of Project traffic (See Exhibit 3).

The potential impacts of the Project on public transit system, and bikeway and pedestrian facilities were also analyzed.

1.3 Scenarios Considered

This TIS analyzes the following scenarios:

- Existing (2017) No Project Conditions (weekday AM Peak-Hour and PM Peak Hour)
- Existing (2017) Sunday No Project (27,000 Seats) (pre-game peak hour and post-game peak hour)
- Existing (2017) Plus Project Alternative 1 (weekday AM Peak-Hour and PM Peak Hour)
- Existing (2017) Plus Project Alternative 2 (weekday AM Peak-Hour and PM Peak Hour)
- Existing (2017) Sunday Plus Project 30,000-Seat Event (pre-game peak hour and post-game peak hour)
- Near-Term (2019) Sunday No Project (27,000 Seats) (pre-game peak hour and post-game peak hour)

Exhibit 2: Study Intersections (List)

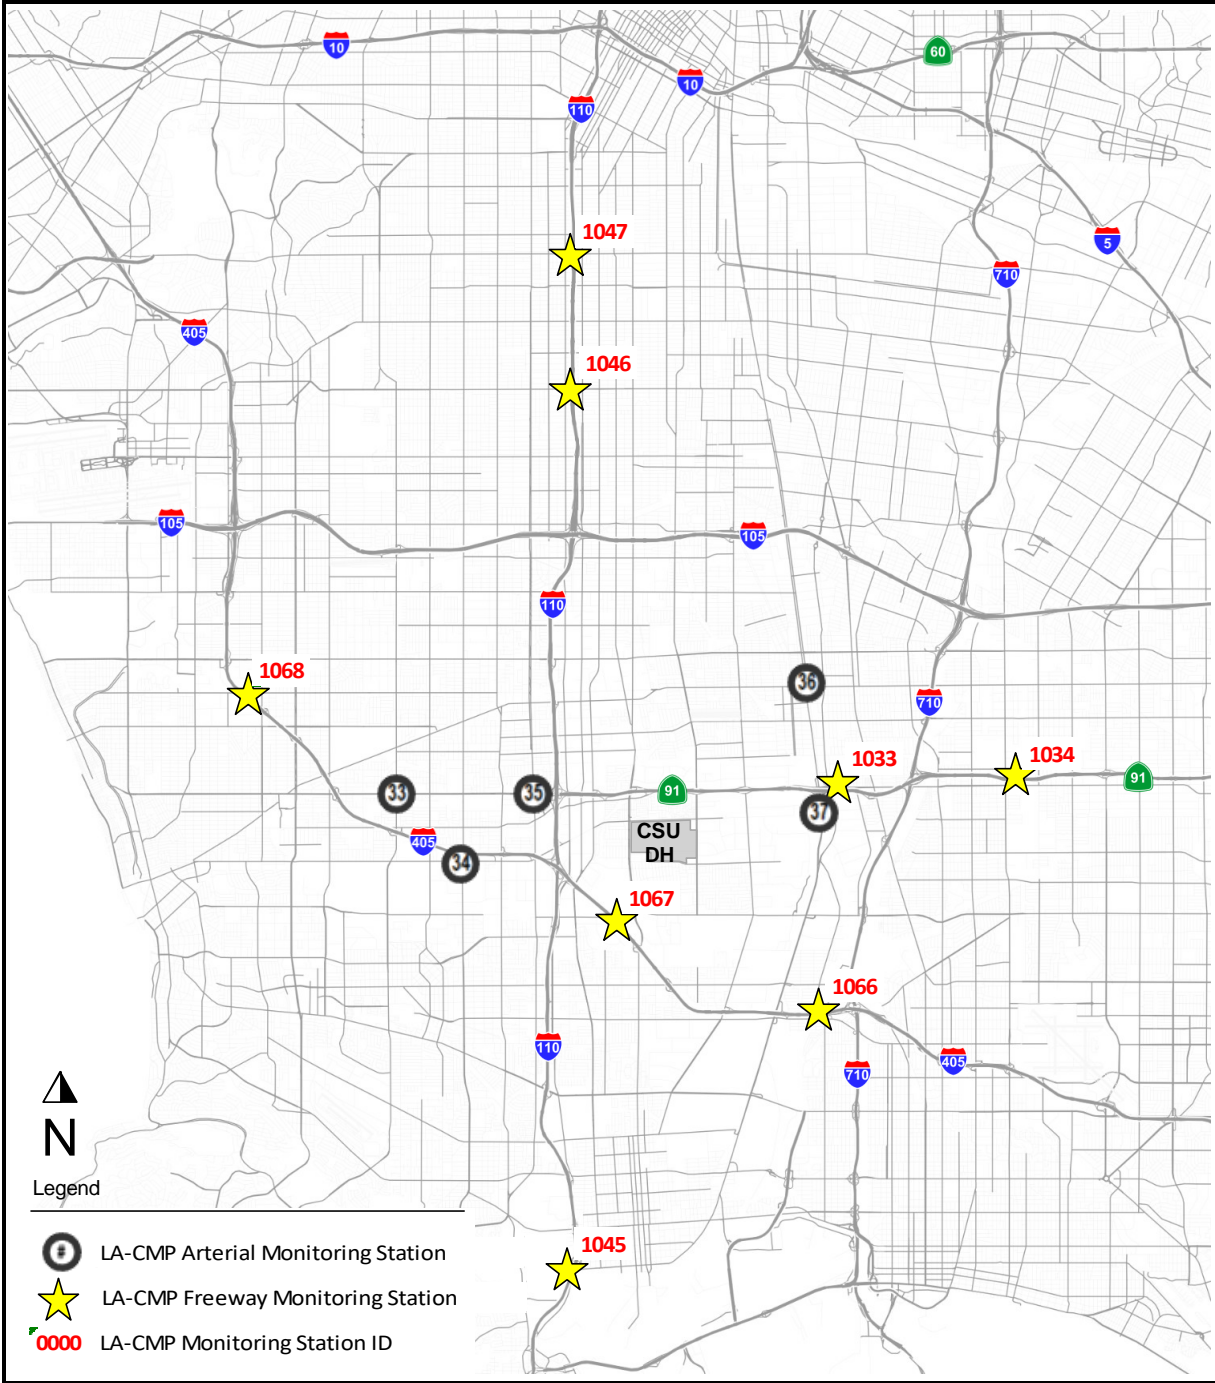

Exhibit 3: LA-CMP Arterial and Freeway Monitoring Stations Analyzed (map)

- Near-Term (2019) Sunday Plus Project 30,000-Seat Event (pre-game peak hour and post-game peak hour)
- Interim Year (2025) No Project Conditions (weekday AM Peak-Hour and PM Peak Hour)
- Interim Year (2025) Plus Project Alternative 1 Conditions (weekday AM Peak-Hour and PM Peak Hour)
- Interim Year (2025) Plus Project Alternative 2 Conditions (weekday AM Peak-Hour and PM Peak Hour)
- Horizon Year (2035) No Project Conditions (weekday AM Peak-Hour and PM Peak Hour)
- Horizon Year (2035) Sunday No Project (27,000 Seat) (pre-game peak hour and post-game peak hour)
- Horizon Year (2035) Plus Project Alternative 1 Conditions (weekday AM Peak-Hour and PM Peak Hour)
- Horizon Year (2035) Plus Project Alternative 2 Conditions (weekday AM Peak-Hour and PM Peak Hour)
- Horizon Year (2035) Sunday Plus Project 30,000-Seat Event (pre-game peak hour and post-game peak hour)

The scenarios were based on the following data and assumptions:

- Traffic conditions at study intersections for Existing scenarios were based on traffic counts taken in Spring 2017 when CSUDH was in normal session. Existing (2017) traffic volumes on the study freeway sections came from the 2009 CMP data factored up via a growth rate to 2017³.
- Traffic volumes for Near-Term (2019) No Project scenarios were developed by factoring up the Existing (2017) background traffic to account for increases due to the growth of the region. The growth factors used were based on guidance in the Los Angeles County Congestion Management Plan (LA-CMP). The traffic associated with development projects that have already been approved by the City of Carson were then added to complete the Near-Term background traffic. Also, transportation projects in the study area that are included in SCAG's 2016 Regional Transportation Plan and scheduled for completion by 2019 were added to the assumed roadway network.
- The Near-Term (2019) No Project scenario added the traffic associated with a 27,000-seat event to the 2019 background traffic. StubHub Center obtained environmental clearance for 27,000-seat events in an EIR certified in 2001⁴ and has held large sports events many times since, so these events constitute the existing conditions (CEQA guidelines state that existing developments should form the basis for No Project scenarios). The Near-Term (2019) Plus Project with 30,000-Seats Event scenario added the traffic associated with 3,000 additional seats for a total of 30,000 seats. No other projects associated with the Master Plan are expected to be completed by 2019, so the additional 3,000 seats and the associated traffic management plan constitute "the Project" for 2019.

³ The study team checked the 2017 volumes in the PeMS system of embedded loop detectors and found that they were lower than the 2009 volumes factored up 8 years. The latter was used to produce an intentionally conservative forecast of traffic conditions.

⁴ National Training Center California State University Dominguez Hills – Final Environmental Impact Report, Terry A. Hayes Associates, April 2001

- Traffic volumes for the Interim Year (2025) scenarios were developed through a similar process as was used for 2019. Traffic volumes for the 2025 No Project condition were developed by factoring up the existing weekday traffic counts using the growth factor from the LA CMP and then adding in the traffic for other development projects that may appreciably affect traffic volumes near the campus⁵. Transportation projects in the study area that are included in SCAG's 2016 Regional Transportation Plan and scheduled for completion by 2025 were added to the assumed roadway network.
- The Interim Year (2025) Plus Project Alternative 1 scenario analyzes weekday conditions with the addition of the University Village component of the CMP. In addition, full-time equivalent students were assumed to increase by 2% per year. It was assumed that any buildings that are demolished to make room for the University Village would be replaced by functionally equivalent facilities elsewhere to maintain student growth and number of students residing on campus.
- The Interim Year (2025) Plus Project Alternative 2 scenario is the same as the above 2025 Plus Project Alternative 1 scenario with the addition of 1,100 on-campus student beds.
- Traffic volumes for the Horizon Year (2035) scenarios were developed through a similar process as was used for 2025. Background traffic was factored up using growth factors from LA-CMP. The traffic associated with development projects that are in the City of Carson pipeline were then added to complete the Horizon Year No Project traffic. For Sunday scenarios, a 27,000-seat event was included as part of the No Project Conditions. Transportation projects in the study area that are included in SCAG's 2016 Regional Transportation Plan and scheduled for completion by 2035 were added to the assumed roadway network.
- The Plus Project Alternative 1 scenario for 2035 adds all of the developments from the Master Plan, including (for Sundays) an increase of 3,000 seats to StubHub Center to 30,000 total seats.
- . The Plus Project Alternative 2 scenario for 2035 is the same as the 2035 Plus Project Alternative 1 scenario with a the addition of 1,040 on-campus student beds, 80 fewer market rate housing units.

⁵ Development projects listed in the City of Carson's Development Status Report as of August 28, 2017 at <http://ci.carson.ca.us/communitydevelopment/devstatusreport.aspx>

2 Methodology and Regulatory Policies

2.1 Intersection Analysis

Traffic operational conditions at intersections are described in terms of traffic Level of Service (LOS) which ranges from LOS A, which indicates that vehicles experience little delay in passing through the intersection, to LOS F, which indicates that vehicles are likely to encounter long queues and stop-and-go conditions. The LOS thresholds are shown in Exhibit 4. In Los Angeles County, the Intersection Capacity Utilization (ICU) method is typically used to determine LOS⁶. The ICU method compares the volumes in the critical conflicting movements to the intersection capacity (a function of the number of lanes provided) to produce a volume-to-capacity ratio.

Level of Service	Description	Volume to Capacity (V/C) Ratio
A	Volume-to-capacity ratio is low and either the progression is exceptionally favorable or the cycle length is short. If due to favourable progression, most vehicles arrive during the green indication and travel through the intersection without stopping.	≤ 0.600
B	Volume-to-capacity ratio is low and either the progression is highly favorable or the cycle length is short. More vehicles stop than with LOS A.	0.601-to-0.700
C	Progression is favorable or the cycle length is moderate. Individual cycle failures (i.e. one or more queued vehicles are not able to depart as a result of insufficient capacity during the cycle) may begin to appear at this level. The number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.	0.701-to-0.800
D	Volume-to-capacity ratio is high and either progression is ineffective or cycle length is long. Most vehicles stop and individual cycle failures are noticeable.	0.801-to-0.900
E	Volume-to-capacity ratio is high, progression is unfavorable, and the cycle length is long. Individual cycle failures are frequent.	0.901-to-1.000
F	Volume-to-capacity ratio is very high, progression is very poor, and the cycle length is long. Most cycles fail to clear the queue.	> 1.000

Exhibit 4: Intersection Level of Service Thresholds

⁶ See *Traffic Impact Analysis Report Guidelines*, County of Los Angeles Department of Public Works, January 1997

The ICU method usually cannot be applied to two-way stop controlled (TWSC) intersections. For that reason, the HCM 2000 methodology was used to determine the LOS for intersections of this type. For the Sunday scenarios, there are some TWSC intersections that will be under the supervision of traffic officers and so would function like signalized intersections (right-turning vehicles might not be required to stop, for example). They were therefore analyzed using the ICU methodology for signalized intersections.

2.1.1 CSU Significance Thresholds for Roads and Intersections

The Transportation Impact Study Manual⁷ of the California State University system defines the significance criteria for the transportation-related impacts of the proposed project. For off-site roadways and intersections, a significant traffic impact would occur if:

- A roadway segment or intersection operates at LOS D or better under the no project scenario and the addition of project trips causes overall traffic operations on the facility to operate at LOS E or F.
- A roadway segment or intersection operates at LOS E or F under the no project scenario and the project adds both 10 or more peak hour trips and 5 seconds or more of peak hour delay, during the same peak hour.
- If an intersection operates at a very poor LOS (LOS F with an average control delay of 120 seconds or more), the significance criterion is an increase in V/C ratio of 0.02 or more.

2.1.2 Other Agencies' Significance Thresholds for Roads and Intersections

The significance thresholds from other agencies (i.e. besides those found in the CSU Transportation Impact Study Manual) are outlined below for informational purposes only. These include the Cities of Carson and Compton, and the County of Los Angeles.

City of Carson

The City of Carson has the following policy regarding intersection impacts:

Policy: TI-2.1 Require that new projects not cause the Level of Service for intersections to drop more than one level if it is at Level A, B or C, and not drop at all if it is at D or below, except when necessary to achieve substantial City development goals.

City of Compton

The City of Compton has established LOS "D" as a target LOS standard, and LOS "E" as a threshold standard. The City recognizes that not all intersections within the City can meet the target LOS D. In these instances, the City Council must find that the improvements necessary to meet the target LOS D are not feasible because of one or more of the following reasons:

- The cost of the necessary improvements exceeds available funding sources;
- The design of the necessary improvements is not compatible with the surrounding land uses; or,
- The design of the necessary improvements is contrary to other established City policies.

Los Angeles County

The Traffic Impact Analysis Report Guidelines for Los Angeles County defines thresholds based on the volume-to-capacity (V/C) ratio. The County thresholds as shown in Exhibit 5.

⁷ California State University Transportation Impact Study Manual, November 2012

Pre-Project Condition		Increase in V/C from Project
LOS	V/C Ratio	
C	0.71 to 0.80	0.04 or more
D	0.81 to 0.90	0.02 or more
E/F	0.91 or more	0.01 or more

Exhibit 5: LA County Intersection Impact Thresholds

2.2 Freeway Analysis

Caltrans has established guidelines⁸ for analyzing impacts on the state highway system. These guidelines require that a project's impacts be analyzed when a project:

- Generates over 100 peak hour trips assigned to a State highway facility
- Generates 50 to 100 peak hour trips assigned to a State highway facility – and, affected State highway facilities are experiencing noticeable delay; approaching unstable traffic flow conditions (LOS “C” or “D”).
- Generates 1 to 49 peak hour trips assigned to a State highway facility – the following are examples that may require a full TIS or some lesser analysis:
- Affected State highway facilities experiencing significant delay; unstable or forced traffic flow conditions (LOS “E” or “F”).
- The potential risk for a traffic incident is significantly increased (i.e., congestion related collisions, non-standard sight distance considerations, increase in traffic conflict points, etc.).

Caltrans' traffic analysis guidelines focus on weekday peak hours as the critical time periods for impact analysis. To supplement the analysis called for in the guidelines, an additional analysis was done to show that the Project would not have a significant impact on freeways on Sundays. This analysis can be found in Section 6.3.3.

In Los Angeles County, freeway mainline LOS is estimated through the calculation of demand to capacity (D/C) ratio. LOS ranges from LOS A, which indicates that vehicles experience very little traffic, to LOS F, which indicate that the freeway is severely congested. LOS F(1) through F(3) designations are assigned for facilities with speeds less than 25 mph for more than one hour. The associated LOS is shown in Exhibit 6. The calculation based on D/C is a surrogate for the speed-based LOS used by Caltrans for traffic operational conditions.

⁸ Caltrans Guide for the Preparation of Traffic Impact Studies, December 2002

D/C Ratio	LOS
0.00 - 0.35	A
> 0.35 - 0.54	B
> 0.54 - 0.77	C
> 0.77 - 0.93	D
> 0.93 - 1.00	E
> 1.00 - 1.25	F(0)
> 1.25 - 1.35	F(1)
> 1.35 - 1.45	F(2)
> 1.45	F(3)

Exhibit 6: Freeway Level of Service Threshold

The LA CMP establishes guidelines for significant impact of projects. Significant impact occurs when the project increase the traffic demand by 2% of capacity ($D/C \geq 0.02$) causing an LOS F ($D/C > 1.00$). If the facility is already at LOS F, significant impact occurs when the proposed project increases the traffic demand by 2% of capacity ($D/C \geq 0.02$).

2.3 Congestion Management Plan (CMP) Analysis

The LA-CMP establishes guidelines for analyzing impacts on the transportation system. These guidelines require that a project's impacts be analyzed for:

- All CMP arterial monitoring intersections, including monitored freeway on- or off-ramp intersections, where the proposed project will add 50 or more trips during either the AM or PM weekday peak hours.
- If CMP arterial segments are being analyzed rather than intersections, the study area must include all segments where the proposed project will add 50 or more peak hour trips (total of both directions).
- Mainline freeway monitoring locations where the project will add 150 or more trips, in either direction, during either the AM or PM weekday peak hours.

CMP monitoring intersections and roadways meeting these criteria were identified and are included in the study facilities described in Section 1.2 and shown in Exhibit 3.

2.4 Bicycle and Pedestrian Analysis

The CSU Transportation Impact Study Manual specifies that the TIS should provide the following information regarding potential for bicycle and pedestrian impacts:

- A qualitative description of existing bicycle and pedestrian facilities in the project vicinity, including identifying the location and type of bicycle facilities, presence of sidewalks, and the level of usage.
- A summary of policies from area general plans or master plan related to bicycle and pedestrian travel
- Evaluation of how the project affects the current and planned bicycle and pedestrian facilities in the study area, and whether the project creates any significant conflicts with applicable bicycle and pedestrian policies.
- A map showing existing and planned bicycle facilities in the study area.

The manual also defines the significance thresholds for bicycle and pedestrian impacts. A significant impact would occur if:

- A project significantly disrupts existing or planned bicycle facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards, or
- A project significantly disrupts existing or planned pedestrian facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.

2.5 Transit Analysis

Similarly, the Manual specifies that the TIS should provide the following information regarding the potential for transit impacts:

- A qualitative description of transit service and route connectivity in the project area, including campus shuttle service, local bus service, and regional bus or rail service
- Evaluation of the project's consistency with applicable transit policies and identification of conflicts with existing and planned routes and level of services. Examples of conflicts include a project transit demand that will exceed the existing or planned service capacity or a required change in bus routing due to the physical or operational requirements of the project that lengthens transit trip times or headways.
- A map showing transit routes within two miles of the project site.

The manual also defines the significance thresholds for transit impacts. A significant impact would occur if:

- A project significantly disrupts existing or planned transit facilities and services or significantly conflicts with applicable transit plans, guidelines, policies, or standards.

3 Transportation Setting

3.1 Existing Land Use

CSUDH was incorporated into the California State University system in 1966 as one of California State University's 23 campuses. CSUDH offers 43 undergraduate majors, 19 master's degrees and a number of certificate and credential programs. The 4-year university is accredited by the Accrediting Commission for Secondary Colleges and Universities of the Western Association of Schools and Colleges (WASC), the Association of Collegiate Business Schools and Programs (ACBSP), and the National Association of Schools of Public Affairs and Administration (NASPAA).

The CSUDH campus is located southwest of Central Avenue and Victoria Street in the City of Carson, in southern Los Angeles County, and is situated near the top of the Dominguez Hills (see Exhibit 7 and Exhibit 8). The campus consists of 346 acres. In 2002, 85 acres on the west end of campus was leased for the development of a soccer stadium, velodrome, tennis stadium and training facilities. The remaining 261 acres of campus contains existing campus facilities, along with undeveloped land. In addition to the classrooms for CSUDH, the California Academy of Mathematics and Sciences (CAMS), a specialized public magnet high school, is located on the campus.

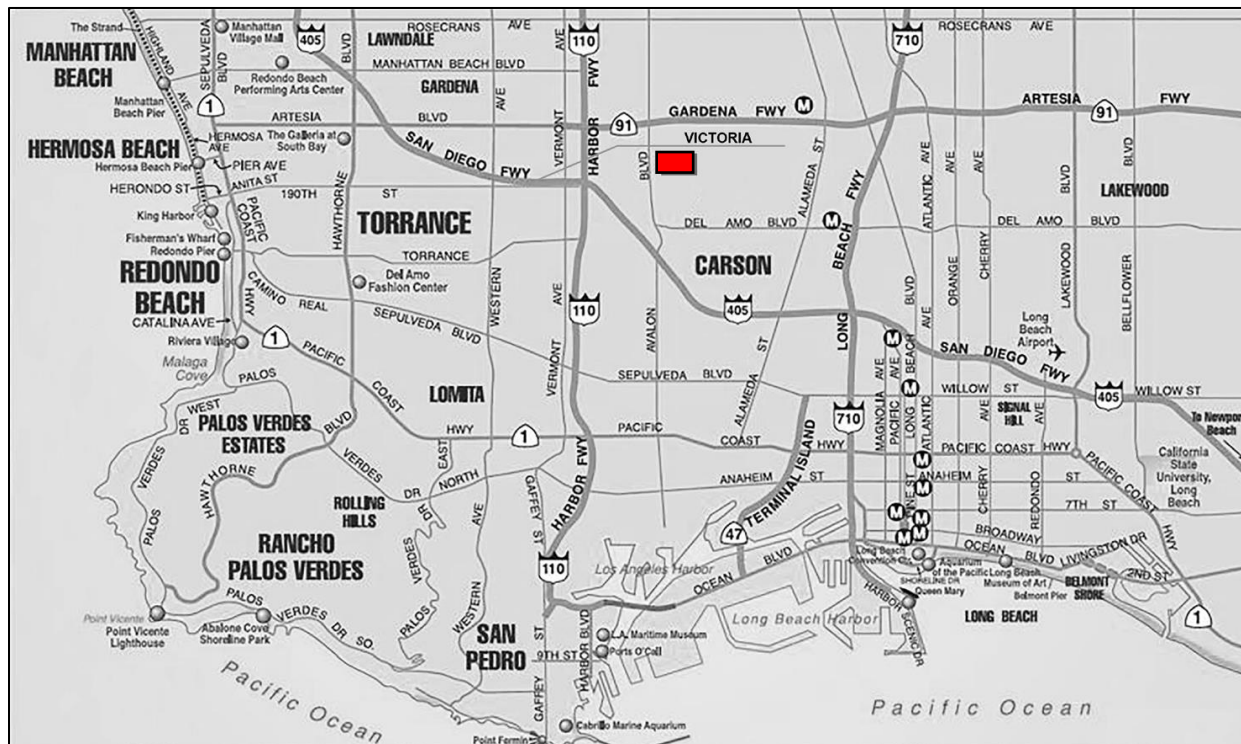

Exhibit 7: CSUDH Location and Regional Setting

Exhibit 8: Aerial Photograph of CSU Dominguez Hills Campus, 2016

The academic core of the campus is located in the north central portion of the campus site (see Exhibit 10). Surface parking facilities are distributed around the periphery of the core while support facilities are located near the center of campus. Athletic Facilities are located on the southwestern portion of campus and in the south-central portion of campus along with CAMS. The southern and southeastern portions of the campus are currently undeveloped and are being used as a commercial nursery.

The current users of the campus are summarized in Exhibit 9 as:

Person Type	Number of People
Students	
On-Campus Students	649
Online only Students	600
Off-Campus Students	12,822
Total Student (head count)	14,071
Total Student (FTEs)	11,118
Non-Students	
Faculty/Staff	1,052
High School Students	676
Child/Infant Care Center Students	92

Exhibit 9: Existing Campus Users

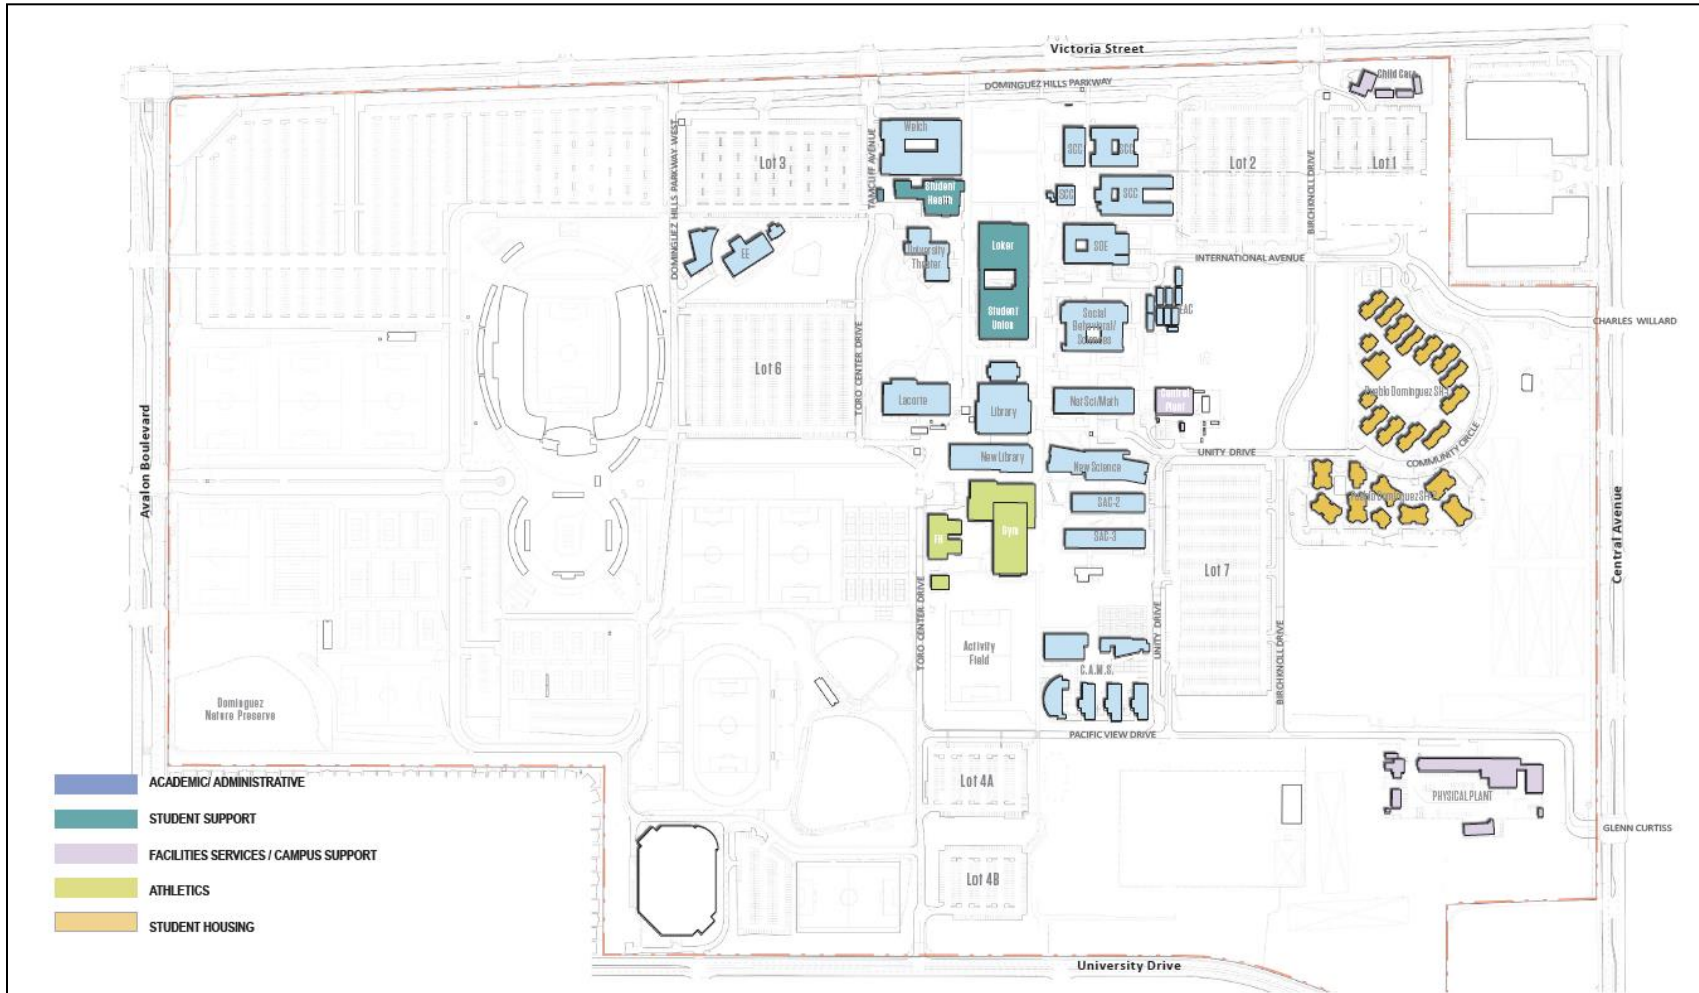

Exhibit 10: Map of Existing CSUDH Campus

3.1.1 Existing Uses at the StubHub Center

StubHub Center is a sports complex used as a practice and event venue for soccer, tennis, track & field, baseball, and cycling. Exhibit 11 shows the layout of the various facilities at StubHub Center. These include a 2,450-seat velodrome, an 8,000-seat tennis stadium that is expandable to 13,000 by adding bleachers, and an outdoor track & field facility that is authorized for 20,000 spectators.

The proposed Project would expand the seating of the soccer stadium when used for Sunday afternoon events. The stadium has seating for 27,000 spectators when configured for Major League Soccer (MLS) games and the proposed Project is to seat 30,000 spectators when configured for Sunday afternoon events. The stadium is the home field of the LA Galaxy MLS franchise and the LA Chargers NFL franchise starting at the beginning of the 2017 season. In addition to regular use for LA Galaxy games, the stadium has been used for many other Level 3⁹ (20,000+ spectators) sporting events including:

- 2003 Fédération Internationale de Football (FIFA) Women's World Cup
- 2003 MLS All-Star Game
- 2003 MLS Cup
- 2004 MLS Cup
- 2005 Confederation of North, Central American and Caribbean Association Football (CONCACAF) Gold Cup matches
- 2007 CONCACAF Gold Cup matches
- 2008 MLS Cup
- 2009 CONCACAF Gold Cup matches
- 2011 CONCACAF Gold Cup matches
- 2012 MLS Cup
- 2014 MLS Cup

The proposed Project is thus an extension of a long history of major sporting events held at this venue. These events provide the operators of StubHub Center with substantial experience in dealing with the parking and transportation issues arising from such events.

3.1.2 Surrounding Land Uses and Setting

The CSU Dominguez Hills campus is located in the City of Carson, in Los Angeles County (see Exhibit 12). The campus is separated from the residential development to the north by Victoria Street, to the south by Avalon Boulevard and on the east by Central Avenue. Central Avenue abuts a series of industrial park buildings and provides access to the campus from State Route (SR) -91 freeway.

⁹ The Joint Use Agreement between ASC and CSU describes three types of events at StubHub Center, namely Level 1 with up to 12,500 patrons, Level 2 with up to 20,000 patrons, and Level 3 with up to 27,000 patrons.

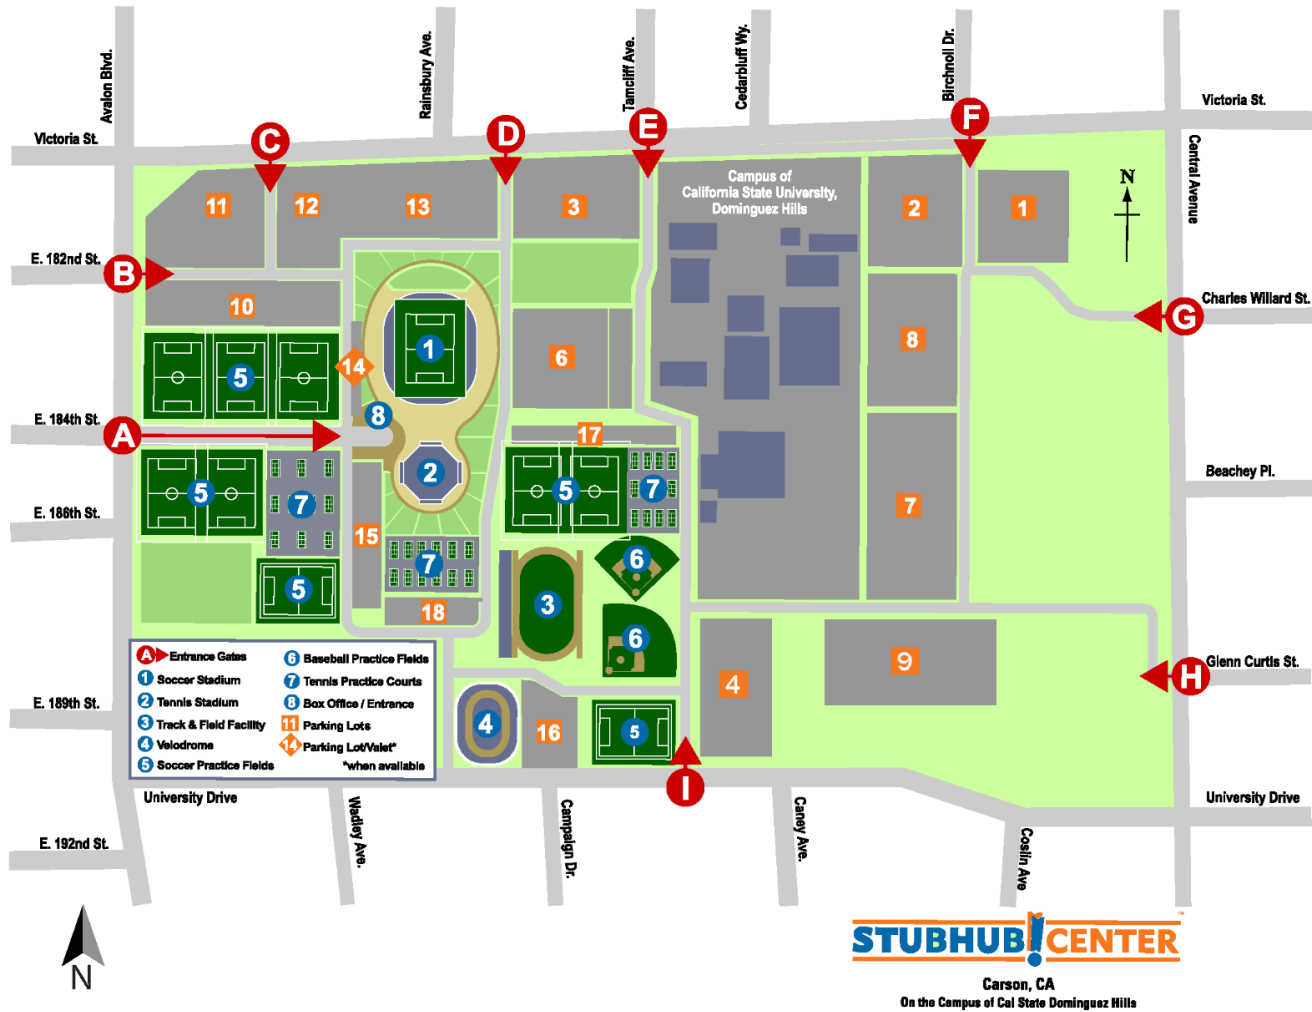

Exhibit 11: StubHub Center and Associated Parking

3.2 Existing and Planned Roadway System

Important roadways in the vicinity of the CSUDH Campus and StubHub Center include (see Exhibit 12):

Freeways:

- **California State Route 91 (SR-91)** is a major east-west freeway through Los Angeles. In the vicinity of the Project it has four lanes in each direction with two frontage roads. The Project can be accessed from SR-91 via Central Avenue and Avalon Boulevard.
- **Interstate 110 (I-110)** is a north-south freeway to the west of the study area with four lanes in each direction. The Project can be accessed from I-110 via 190th Street, which turns into Victoria Street in the vicinity of StubHub Center.
- **Interstate 405 (I-405)** is a north-south freeway with four lanes in each direction. The Project can be accessed from I-405 via 190th street, Main Street, Del Amo Boulevard, and Wilmington Ave.
- **Interstate 710 (I-710)** is a nine lane north-south freeway to the east of the study area. The Project can be accessed from I-710 via Del Amo Blvd.

Principal Surface Streets:

- **Avalon Boulevard** is a north-south street classified as a major highway. The street connects the west side of the campus to SR-91 in the north and I-405 in the south. This is a six-lane street with three lanes in each direction. The street includes a landscaped median which incorporates left turn lanes at major intersections and high tension power lines. No parking is allowed on the street however there is access to StubHub Center lots.
- **Victoria Street** is a four-lane east-west street with two lanes in each direction. It is classified as a major highway. The street connects the north side of the campus to/from I-110 and I-405. East of Central Avenue and west of the university campus, Victoria Street includes a middle central left turn lane. By the university campus, the central left turn lane becomes a landscaped median with left turn lanes at all intersections. Victoria Street has access to many parking lots along the north side of campus.
- **University Drive** runs east-west and provides access to the south side of the complex and extends from Avalon Boulevard in the west to just east Wilmington Street. It is classified as a secondary highway with two lanes in each direction. The street includes a central left turn lane in the vicinity of the university campus and a median with turn lanes through the rest of the study area. University Drive offers access to the campus' southern parking lots.
- **Central Avenue** is a street on the east side of campus that runs north-south. It is classified as a major highway with two lanes in each direction. It connects the east side of campus to SR-91 to the north and extends to Del Amo Boulevard to the south. Parking lots in the west of campus can be accessed via Glenn Curtis Street or Charles Willard Street.
- **Wilmington Avenue** is a north-south street east of the Project that is classified as a secondary highway. It has three lanes in each direction and connects to SR-91 to the north and I-405 to the south.
- **Del Amo Boulevard** is an east-west running secondary highway south of University Drive. The street connects to I-405 to the west and I-710 to the east

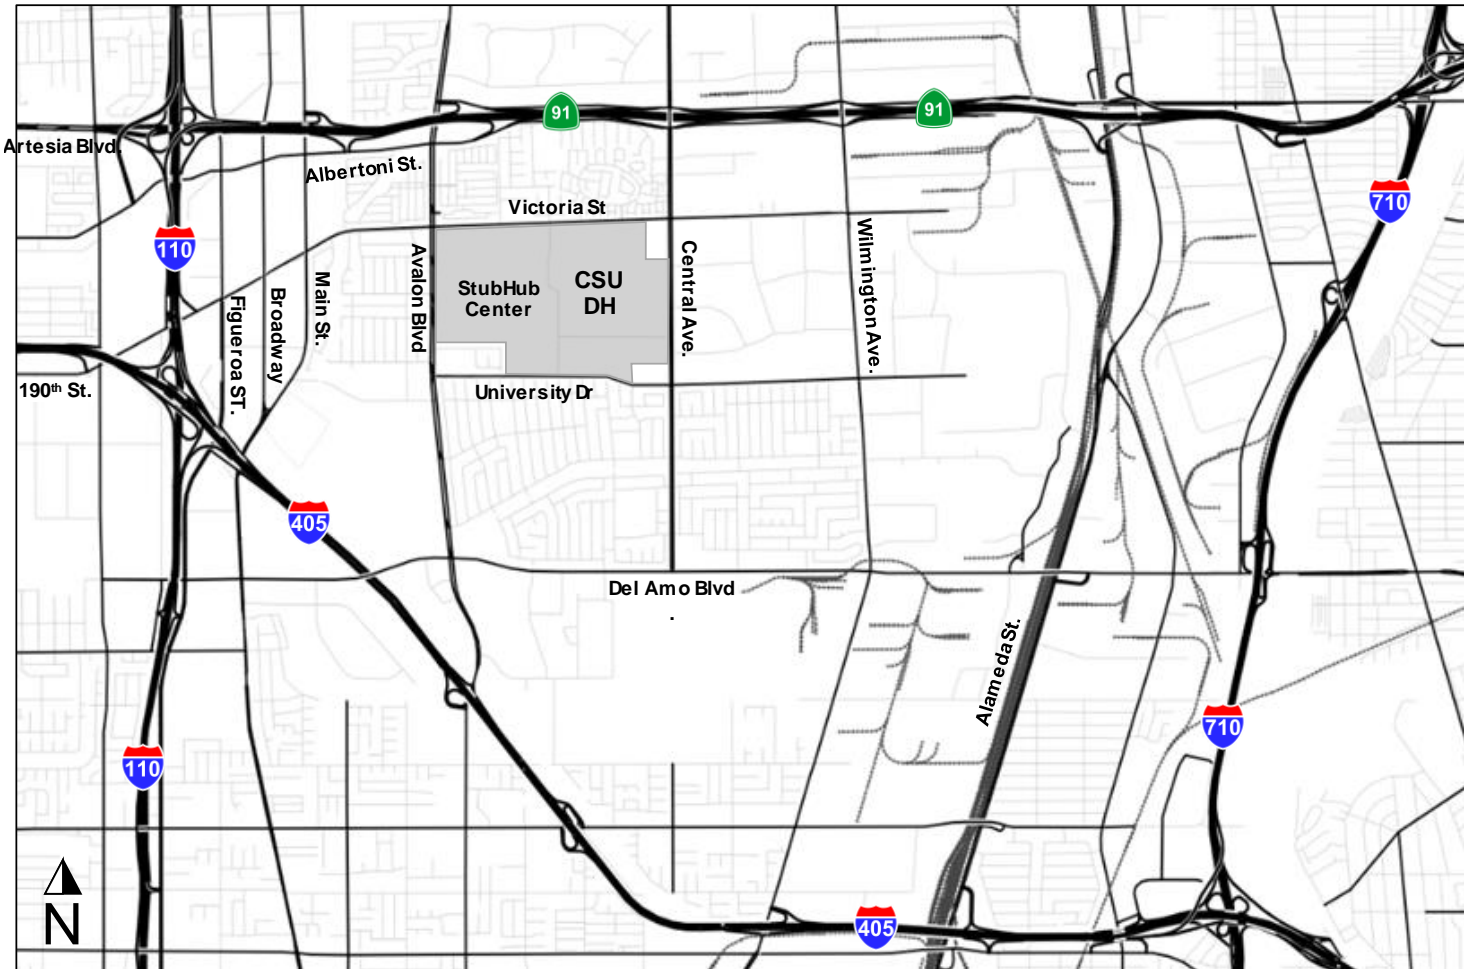

Exhibit 12: Existing Roadway Network

- **Artesia Boulevard** and **Albertoni Street** are frontage roads for SR-91 that run in an east west direction. In Carson, Artesia Boulevard runs to the north of SR-91 and Albertoni Street runs south of SR-91. West of Carson, Artesia Blvd functions as a western arterial extension of SR-91. In the vicinity of the university it is classified as a collector with two lanes in each direction.
- **Main Street** is a four-lane north-south street with two lanes in each direction one half-mile west of the CSUDH campus. It is classified as a major highway.
- **Figueroa Street** is a four-lane north-south street with two lanes in each direction 0.9 miles west of the CSUDH campus. It is classified as a major highway.

Based on information received from the County, the following roadway improvements were assumed for year 2025 and 2035 Future Conditions without Project:

- On **Vermont Avenue** right turn pockets are being added at **West Artesia Boulevard**

3.3 Existing Pedestrian Facilities

The major streets near StubHub Center, including Avalon Boulevard to the west of the stadium, Victoria Street to the north, Central Avenue to the east, and University Avenue to the south, all have sidewalks on both sides. Crosswalks and pedestrian signals are provided at the major intersections.

3.4 Existing and Planned Bicycle Facilities

The existing and planned bicycle facilities in the vicinity of StubHub Center are shown in Exhibit 14. Existing facilities near the CSUDH campus and StubHub Center include Class 1 (bicycle paths), Class 2 (bicycle lanes), and Class 3 (bicycle routes) facilities.

3.5 Existing and Planned Transit Facilities

The study area is served by several transit agencies. These include 3 Carson Circuit routes, 5 Metro bus routes, the Metro Blue line, Compton Renaissance Transit Systems, Long Beach Transit, and Torrance Transit. Exhibit 13 shows the routes that serve the project area and their weekday operating hours and the peak headways. Exhibit 15 is a map showing the portion of the routes that lies in the study area.

Transit route	Weekday Operating Hours	Peak Headways
Carson Circuit Route A	5:20 am to 6:40 am	40 minutes
Carson Circuit Route E	5:20 am to 6:40 am	40 minutes
Carson Circuit Route H	5:20 am to 6:40 am	40 minutes
Compton Renaissance Route 5	7:30 am to 3:30 pm	1 hour
Long Beach Route 1	5:00 am to 10:30 pm	5 minutes
LA Metro Blue Line	3:30 am to 2:30 pm	12 minutes
Metro Route 52	4:00 am to 1:00 am	10 minutes
Metro Route 53	4:00 am to 1:00 am	10 minutes
Metro Route 130	5:00 am to 10:00 pm	20 minutes
Metro Route 205	4:00 am to 11:30 pm	30 minutes
Metro Route 246	4:00 am to 2:30 am	30 minutes
Torrance Transit Bus Lines Route 6	5:20 am to 8:30 pm	40 minutes

Exhibit 13: Weekday Transit Services in the Study Area

Exhibit 14: Existing Bicycle Facilities in the Study Area

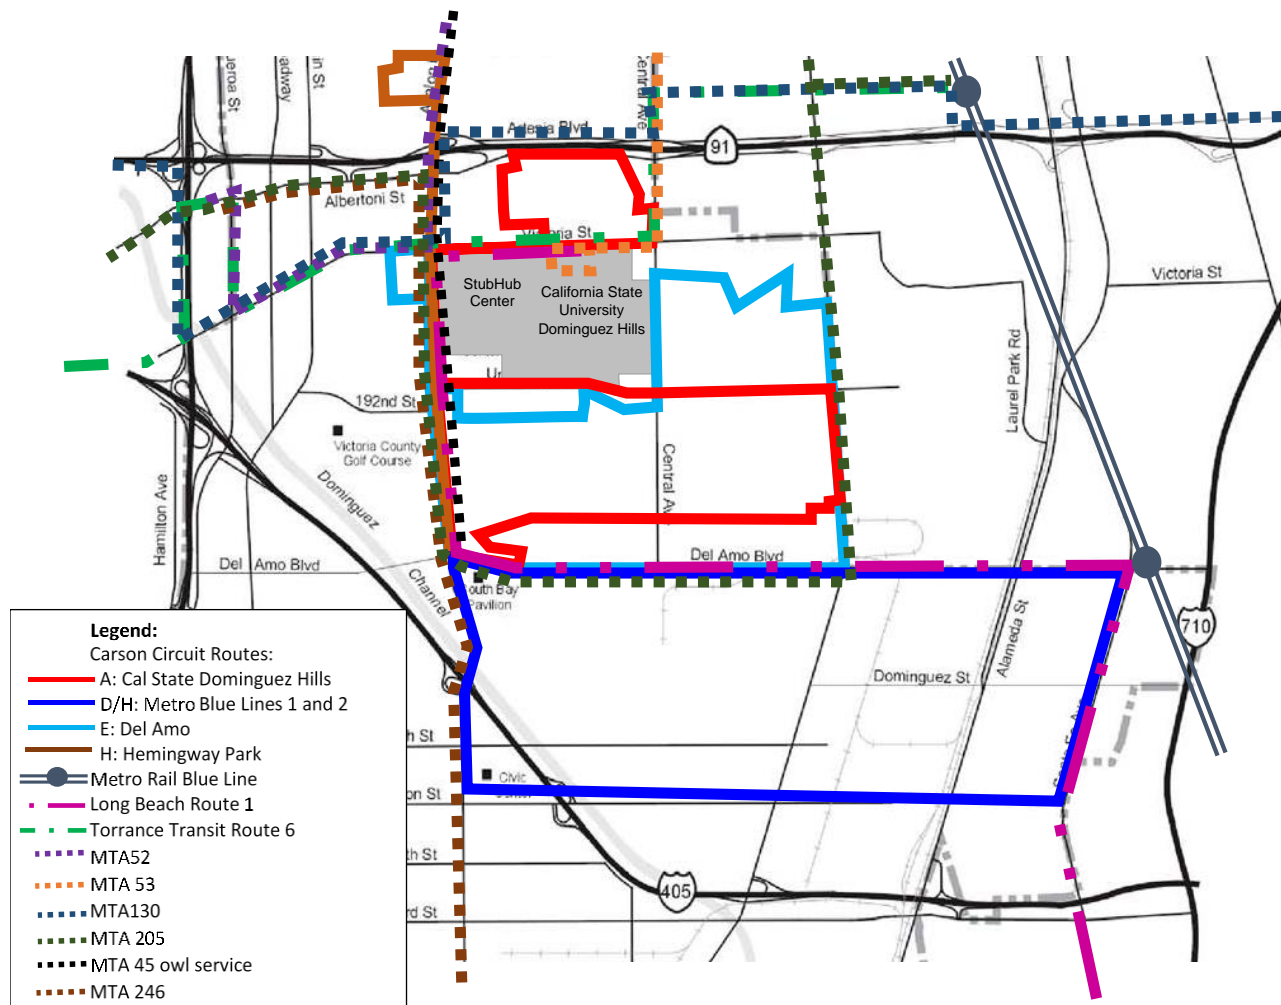

Exhibit 15: Weekday Transit Service in the Study Area (map)

4 Existing Conditions

4.1 Existing Weekday Conditions

The existing conditions at study intersections were determined using traffic counts collected on a typical weekday in April 2017 in the peak AM period (7:00AM to 9:00AM) and peak PM period (4:00PM to 6:00PM) periods (see Appendix B). Exhibit 17 shows the AM and PM peak hour traffic volumes by turning movement at each study intersection, along with the existing lane configurations (see Exhibit 1 for a key map of study intersection locations).

4.1.1 Existing Weekday Intersection Level of Service

Exhibit 16 shows in tabular format the level of service (LOS) based on the traffic volumes shown in Exhibit 17 (also see Appendix C). The LOS is also shown on maps in Exhibit 18 (for the AM peak hour condition) and Exhibit 19 (for the PM peak hour condition). Four intersections do not meet the target LOS of D or better under existing conditions, namely:

- Intersection #1, Victoria Ave./Drive D, during the PM peak hour
- Intersection #20, I-110 SB Off-Ramp/190th St., during both peak hours
- Intersection #33, W. Artesia Blvd./Crenshaw Blvd., during both peak hours
- Intersection #35, W. Artesia Blvd./Vermont Ave., during the PM peak hour

4.1.2 Existing Weekday Freeway Level of Service

The existing LOS for the study freeway segments are shown in Exhibit 20. All CMP locations were analyzed using the Demand to Capacity ratio (D/C) as required by the Los Angeles County CMP. As shown, seven CMP monitoring locations do not meet the target LOS of D or better under existing conditions, namely:

- CMP Station #1033, SR-91 East of Alameda St./Santa Fe Ave., Northbound, during PM peak hour
- CMP Station #1034, SR-91 East of Cherry Ave., Northbound, during the PM peak hour
- CMP Station #1046, I-110 at Manchester Blvd., Northbound, during both peak hours and Southbound, during both peak hours
- CMP Station #1047, I-110 at Slauson Ave., Northbound, during both peak hours and Southbound, during both peak hours
- CMP Station #1066, I-405 at Santa Fe Ave., Northbound, during both peak hours, and Southbound, during the PM peak hour
- CMP Station #1067, I-405 South of I-110 at the Carson Scales, Northbound, during both peak hours and Southbound, during both peak hours
- CMP Station #1068, I-405 North of Inglewood Ave. at Compton Blvd., Northbound, during both peak hours and Southbound, during the PM peak hour

Altogether 85 freeway segments are forecast to have an LOS worse than D, including those that are not CMP monitoring stations. These additional locations are:

- SR-91 eastbound, Jct. Rte. 110 to Avalon Blvd., during the PM peak hour
- SR-91 eastbound, Avalon Blvd. to Central Ave., during the PM peak hour

- SR-91 eastbound, Central Ave. to Wilmington Ave., during the PM peak hour
- SR-91 eastbound, Wilmington Ave. to Alameda St., during the PM peak hour
- SR-91 eastbound, Alameda St. to Alameda St./Santa Fe Ave., during the PM peak hour
- SR-91 eastbound, Long Beach Blvd. to Jct. Rte. 710, during the PM peak hour
- SR-91 eastbound, Jct. Rte. 710 to Cherry Ave., during the PM peak hour
- SR-91 eastbound, Paramount Blvd. to Downey Ave., during the PM peak hour
- SR-91 eastbound, Jct. Rte. 19 to Clark Ave., during the PM peak hour
- I-110 northbound, Sepulveda Blvd. to Carson St., during the AM peak hour
- I-110 northbound, Carson St. to Torrance/Del Amo Blvd., during the AM peak hour
- I-110 northbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 northbound, Jct. Rte. 405 to Jct. Rte. 91, during the AM peak hour
- I-110 northbound, Century Blvd. to Manchester Ave., during the both peak hours
- I-110 northbound, Florence Ave. to Gage Ave., during the both peak hours
- I-110 northbound, Slauson Ave. to 51st St., during the both peak hours
- I-110 northbound, 51st St. to Vernon Ave., during the both peak hours
- I-110 northbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the both peak hours
- I-405 northbound, Lakewood Blvd. to Cherry Ave., during the both peak hours
- I-405 northbound, Cherry Ave. to Orange Ave., during the both peak hours
- I-405 northbound, Orange Ave. to Atlantic Ave., during the both peak hours
- I-405 northbound, Atlantic Ave. to Long Beach Blvd, during the both peak hours
- I-405 northbound, Long Beach Blvd to Jct. Rte. 710, during the AM peak hour
- I-405 northbound, Alameda St. to Wilmington Ave., during the both peak hours
- I-405 northbound, Wilmington Ave. to Carson St., during the both peak hours
- I-405 northbound, Carson St. to Avalon Blvd., during the both peak hours
- I-405 northbound, Avalon Blvd. to Jct. Rte. 110, during the both peak hours
- I-405 northbound, Jct. Rte. 110 to Vermont Ave., during the both peak hours
- I-405 northbound, Vermont Ave. to Normandie Ave., during the AM peak hour
- I-405 northbound, Normandie Ave. to Western Ave., during the both peak hours
- I-405 northbound, Western Ave. to Crenshaw Blvd., during the both peak hours
- I-405 northbound, Crenshaw Blvd. to Artesia Blvd., during the both peak hours
- I-405 northbound, Artesia Blvd. to Hawthorne Blvd., during the AM peak hour
- I-405 northbound, Hawthorne Blvd. to Inglewood Ave., during the both peak hours
- I-405 northbound, Inglewood Ave. to Rosecrans Ave., during the both peak hours
- I-710 northbound, Jct. Rte. 91 to Alondra Blvd., during the PM peak hour
- I-710 northbound, Alondra Blvd. to Jct. Rte. 105, during the PM peak hour

- SR-91 westbound, Jct. Rte. 110 to Avalon Blvd., during the both peak hours
- SR-91 westbound, Central Ave. to Wilmington Ave., during the AM peak hour
- SR-91 westbound, Wilmington Ave. to Alameda St., during the AM peak hour
- SR-91 westbound, Alameda St. to Alameda St./Santa Fe Ave., during the AM peak hour
- SR-91 westbound, Long Beach Blvd. to Jct. Rte. 710, during the AM peak hour
- SR-91 westbound, Jct. Rte. 710 to Cherry Ave., during the AM peak hour
- SR-91 westbound, Paramount Blvd. to Downey Ave., during the AM peak hour
- SR-91 westbound, Downey Ave. to Jct. Rte. 19, during the AM peak hour
- SR-91 westbound, Jct. Rte. 19 to Clark Ave., during the both peak hours
- SR-91 westbound, Clark Ave. to Bellflower Blvd., during the AM peak hour
- SR-91 westbound, Bellflower Blvd. to Jct. Rte. 605, during the AM peak hour
- I-110 southbound, Sepulveda Blvd. to Carson St., during the PM peak hour
- I-110 southbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 southbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 southbound, Jct. Rte. 405 to Jct. Rte. 91, during the both peak hours
- I-110 southbound, Rosecrans Ave. to El Segundo Blvd., during the AM peak hour
- I-110 southbound, Century Blvd. to Manchester Ave., during the both peak hours
- I-110 southbound, Florence Ave. to Gage Ave., during the both peak hours
- I-110 southbound, Slauson Ave. to 51st St., during the both peak hours
- I-110 southbound, 51st St. to Vernon Ave., during the both peak hours
- I-110 southbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the both peak hours
- I-110 southbound, Martin Luther King Jr. Blvd. to Exposition Blvd., during the both peak hours
- I-405 southbound, Lakewood Blvd. to Cherry Ave., during the PM peak hour
- I-405 southbound, Cherry Ave. to Orange Ave., during the both peak hours
- I-405 southbound, Orange Ave. to Atlantic Ave., during the both peak hours
- I-405 southbound, Atlantic Ave. to Long Beach Blvd, during the PM peak hour
- I-405 southbound, Long Beach Blvd to Jct. Rte. 710, during the PM peak hour
- I-405 southbound, Alameda St. to Wilmington Ave., during the PM peak hour
- I-405 southbound, Wilmington Ave. to Carson St., during the both peak hours
- I-405 southbound, Carson St. to Avalon Blvd., during the both peak hours
- I-405 southbound, Avalon Blvd. to Jct. Rte. 110, during the both peak hours
- I-405 southbound, Jct. Rte. 110 to Vermont Ave., during the both peak hours
- I-405 southbound, Vermont Ave. to Normandie Ave., during the PM peak hour
- I-405 southbound, Normandie Ave. to Western Ave., during the both peak hours
- I-405 southbound, Western Ave. to Crenshaw Blvd., during the both peak hours

- I-405 southbound, Crenshaw Blvd. to Artesia Blvd., during the both peak hours
- I-405 southbound, Artesia Blvd. to Hawthorne Blvd., during the both peak hours
- I-405 southbound, Hawthorne Blvd. to Inglewood Ave., during the both peak hours
- I-405 southbound, Inglewood Ave. to Rosecrans Ave., during the PM peak hour

Exhibit 20: Existing Weekday Level of Service (LOS) for Study Freeway Locations

4.2 Existing Sunday (27,000 Seats) Conditions

The existing conditions at study intersections was determined using traffic counts collected on a Sunday in February 2017 in the peak pre-event period (12:00PM to 2:00PM) and peak post-game period (4:00PM to 6:00PM) (see Appendix D). The trips for the 27,000-seat event were taken from the 2001 EIR and added to these counts for the Existing Sunday (27,000-Seats) traffic volumes¹⁰. Exhibit 21 shows the pre-game and Exhibit 22 shows the post-game peak hour traffic volumes by turning movement at each study intersection, along with the existing lane configurations (see Exhibit 1 for a key map of study intersection locations).

4.2.1 Existing Sunday (27,000 Seats) Intersection Level of Service

Exhibit 23 shows in tabular format the Existing Sunday level of service (LOS) based on the traffic volumes shown in Exhibit 21 and Exhibit 22 (also see Appendix E). The LOS is also shown on maps in Exhibit 24, for the pre-game peak hour condition, and Exhibit 25 for the post-game peak hour condition. As shown, all intersections have an LOS of D or better.

5 Proposed Project

5.1 Project Alternative 1 Description

Exhibit 26 shows the framework for campus development with academic functions and facilities, student housing and student support, mixed use, residential, and business park. Recreation and athletics locations and major natural and open spaces are also indicated. The map illustrates location, adjacency, and scale of future facilities and improvements that are planned to be developed over the next 20 years.

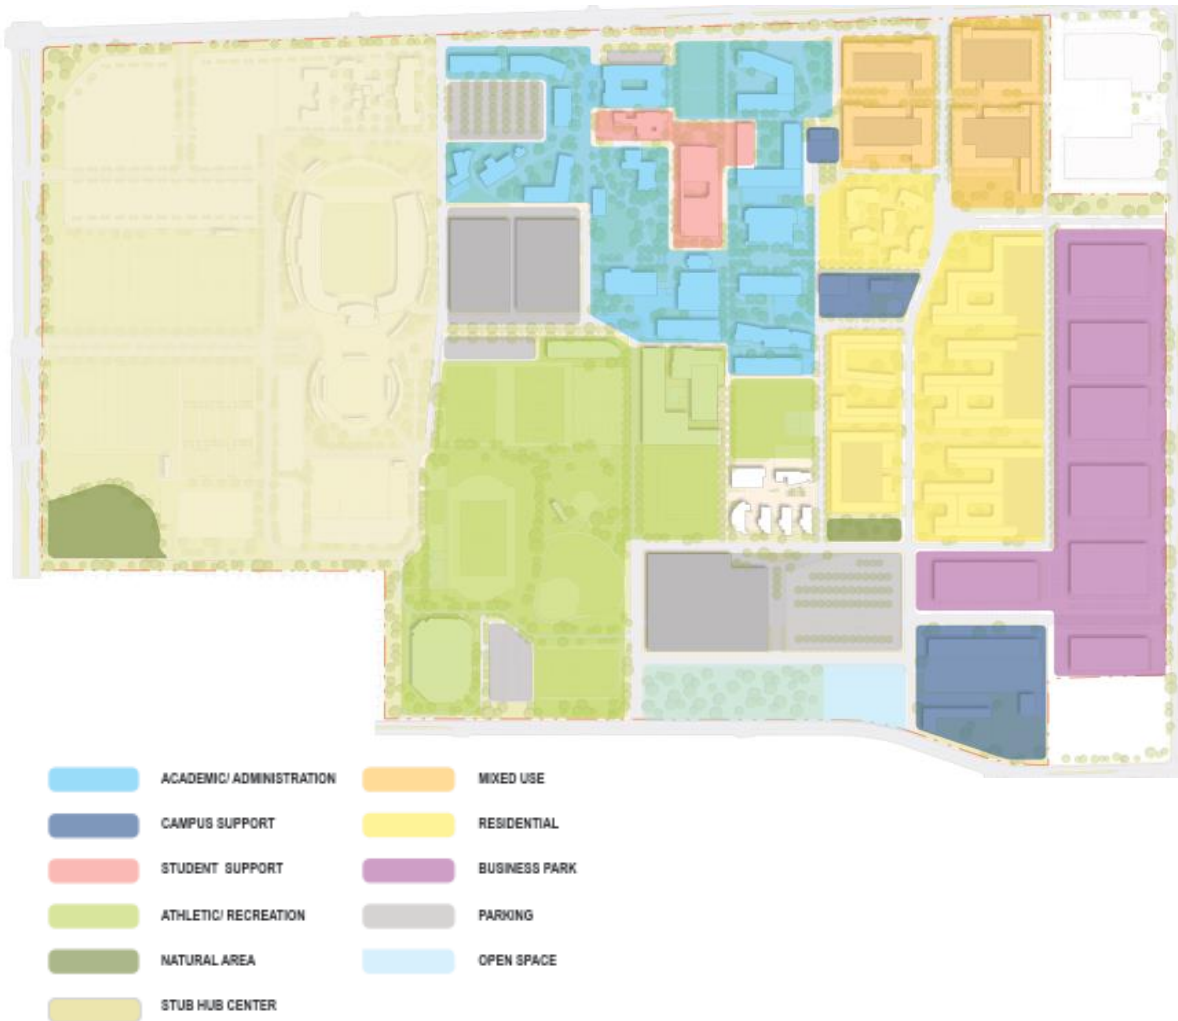

Exhibit 26: Master Plan Development Framework

The 346-acre campus is comprised of three major areas (see Exhibit 27): the Core Campus with academic facilities, a planned new University Village, and the StubHub Center. The Master Plan provides for new facilities and features within these areas. These facilities and features were formulated and designed in response to the Master Plan objectives and specific needs identified throughout a comprehensive Master Plan development process guided by a Master Plan Steering Committee representing faculty, administration, students and staff, and by input from the campus community and stakeholders through a comprehensive public outreach process of community meetings.

Core Campus: The Core Campus comprises the central portion of the campus, extending from Victoria Street to University Avenue. The Master Plan provides for the best use of the existing facilities and for new, appropriately situated facilities and features, including:

- 12 new academic and administrative facilities, providing classrooms, laboratories, faculty and administrative offices, new performing arts facilities; a new incubator/research facility; and facilities for accommodating CSUDH's mobile Fabricator Lab vehicles
- Student support facilities, including an expansion of the Loker Student Union, new student residence halls and a new student recreation center
- Athletic facilities including a remodeled Gymnasium and existing and new playfields;
- Campus support facilities, including a new, expanded Child Care Center; new Facilities Services offices and yards; an expansion of the existing Central Plant; and a satellite central plant
- Parking facilities to accommodate 20,000 FTEs, including reconfigured surface lots and new parking structures
- Reconfigured north campus entry at Tamcliff Drive and Victoria Street; a reinforced campus entry at Toro Center Drive and University Avenue; and reconfigured vehicle access to parking facilities (see Exhibit 29)
- Open space areas for campus activities, programmed and informal gathering and recreation.

University Village: The University Village comprises the most eastern campus area, extending from Victoria Street to south of Glenn Curtis Drive. As illustrated in Exhibit 27, the Master Plan provides for a new mixed use development of this area that includes:

- Retail uses to support both the Core Campus and the University Village, including some on-street parking and parking in structures
- Market-rate housing and parking, including housing for faculty and staff and apartment style housing for students
- Business park development targeted to uses compatible with and supportive of the University's educational mission
- Open space areas for informal activities, leisure, gathering and recreation
- University Avenue, and reconfigured vehicle access from Central Avenue via Charles Willard Drive and Glenn Curtis Drive (see Exhibit 29)
- Vehicle circulation improvements including an extension of Birchknoll Drive from Victoria Street to University Drive.

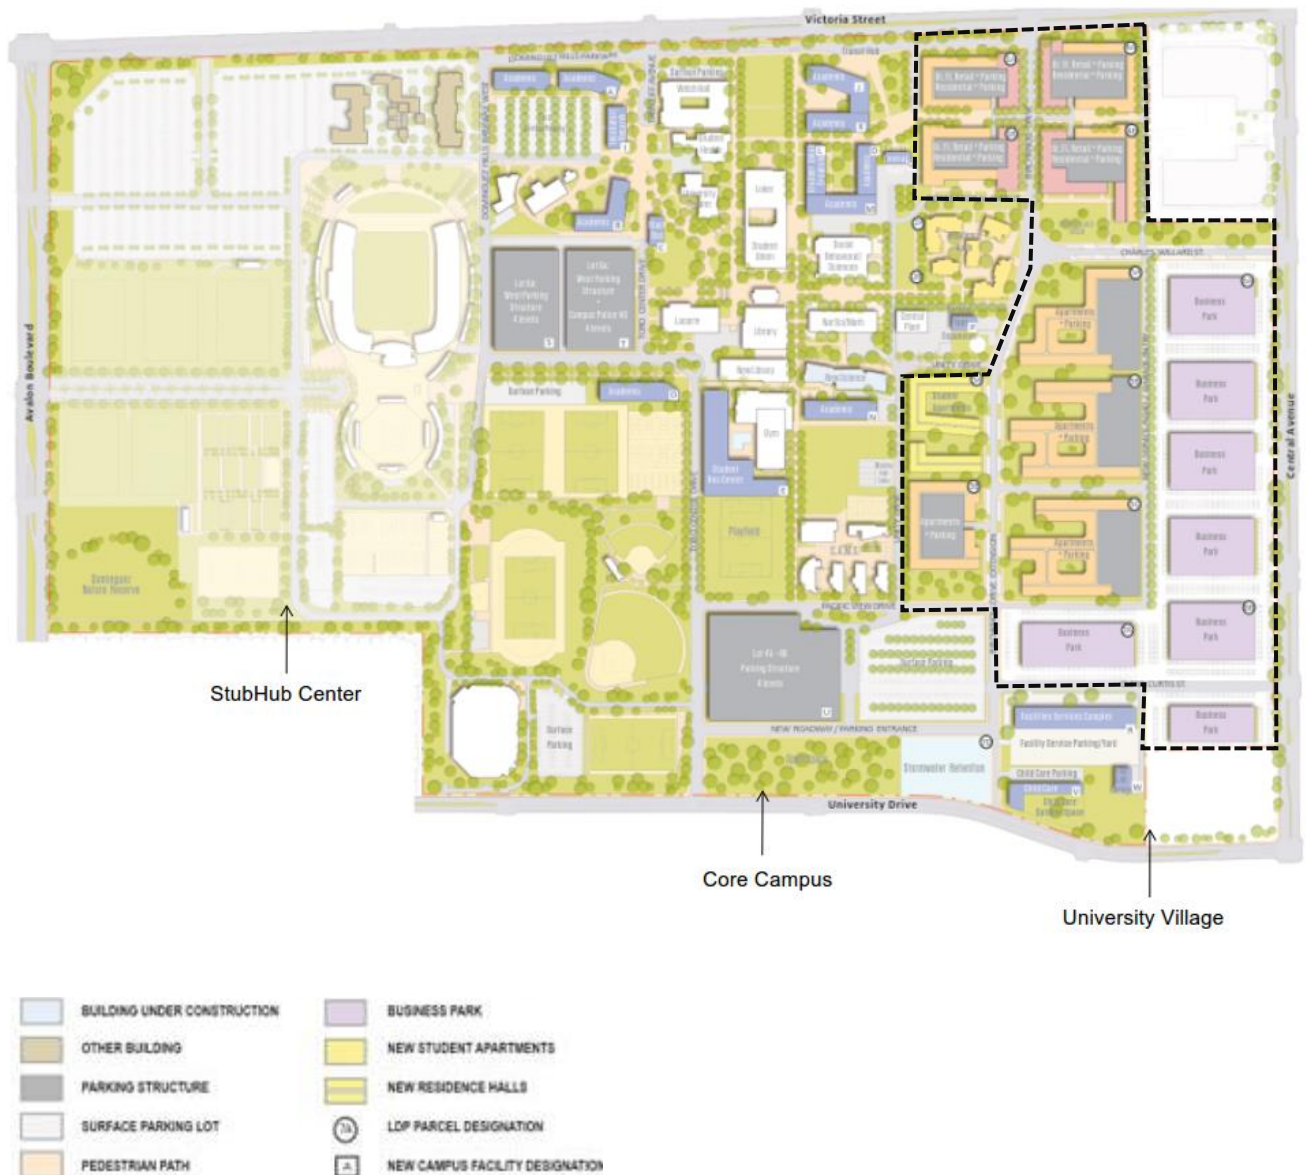

Exhibit 27: Master Plan Facilities Map

StubHub Center: The existing StubHub Center is located the western-most area, east of Avalon Boulevard. The Center’s facilities include an existing stadium with seating for 27,000 spectators. The Master Plan includes the expansion of StubHub Center to seating for 30,000 spectators. Expansion would increase capacity for Sunday afternoon events only. Events are assumed to be on Sundays, with a start time between 1:00 and 2:00 PM and a typical duration of three hours. When 30,000-seat events are taking place no other activities that might attract additional spectators to the site (tennis or bicycling events, for example) would occur at times that would overlap with the larger 30,000-seat events. The 30,000-seat events at StubHub Center that are proposed as part of the Project would involve off-site parking at several locations (see Exhibit 30) and temporary traffic controls both before and after the events (see Exhibit 31 and Exhibit 32).

Housing: Providing appropriate opportunities for students to live on campus is an important component of the Master Plan. The Master Plan provides for replacement of older student housing facilities and for new student residence halls and student apartments within both the Core Campus and the University Village, providing approximately 940 new additional student beds on campus.

The Master Plan also provides for new housing with up to 2,150 apartment units within the University Village that will be made available for faculty, staff, graduate students, and the general public.

Mixed Use Development: In addition to housing, the University Village will include up to 721,000 square feet of business park facilities, and up to 96,000 square feet of retail uses serving the Village residents and employees.

For the purposes of traffic analysis, the key changes to the campus that will be brought about by the Project can be summarized as shown in Exhibit 28¹¹.

5.2 2025 Interim Year Project Alternative 1

As shown in Exhibit 28, the 2025 Plus Project scenario represents the portion of the CMP buildout that may occur before 2025, namely:

- The mixed-use development portion of University Village. This will include up to 1,070 apartments and up to 96,000 square feet of retail.
- The business park portion of University Village, which will include up to 721,000 square feet of business park facilities.
- An increase of university enrollment equal to 2% per year for a total student population of 13,287 FTEs.
- No change in on-campus students. The number of beds available is assumed to be maintained through 2025.
- Increasing off-campus enrollment by 2,628 students to maintain the ratio of the total student head count to the total student FTEs.
- Increasing faculty and staff by 205 persons to maintain the faculty-to-student ratio
- An Increase in the child/infant care center students by 18 students. This increase is assumed to increase at the same rate as university enrollment, 2% per year.

¹¹ Note that Exhibit 28 shows changes in the number of students but not in the floor space of academic buildings. That is because when a student drives to campus and enters an academic building the trip can be attributed to either the student or to the building, but not both. Attributing it to both would result in double-counting of the trip. Traffic studies for universities have found that attributing traffic to students rather than buildings is more reliable since the student's trip to the campus is not a function of how many buildings a student will enter or how much floor space they will use.

5.3 Project Alternative 2 Description

Project Alternative 2 is the same as the Master Plan in Project Alternative 1 described above with the following changes to the housing component.

Housing: Providing appropriate opportunities for students to live on campus is an important component of the Master Plan. The Master Plan provides for replacement of older student housing facilities and for new student residence halls and student apartments within both the Core Campus and the University Village. Alternative 2 provides approximately 1,980 new additional student beds which is 1,040 new beds more than Alternative 1.

Project Alternative 2 also provides for new housing with up to 2,070 apartment units (compared to 2,150 units in Alternative 1) within the University Village that will be made available for faculty, staff, graduate students, and the public.

For the purposes of traffic analysis, the key changes to the campus that will be brought about by Project Alternative 2 can be summarized as shown Exhibit 33.

5.4 2025 Interim Year Project Alternative 2

As shown in Exhibit 33, the 2025 Plus Project scenario represents the portion of the CMP buildout that may occur before 2025, namely:

- The mixed-use development portion of University Village. This will include up to 1,070 apartments and up to 96,000 square feet of retail.
- The business park portion of University Village, which will include up to 721,000 square feet of business park facilities.
- An increase of university enrollment equal to 2% per year for a total student population of 13,287 FTEs.
- An increase in on-campus students with the number of beds available is assumed to be increased by 1,100 beds through 2025. The existing 650 beds will remain in 2025.
- Increasing off-campus enrollment by 1,528 students to maintain the ratio of the total student head count to the total student FTEs.
- Increasing faculty and staff by 205 persons to maintain the faculty-to-student ratio
- An Increase in the child/infant care center students by 18 students. This increase is assumed to increase at the same rate as university enrollment, 2% per year.

5.5 Overview of Project Vehicle Trip Generation and Distribution

Vehicular traffic from the Master Plan projects was forecast in a multi-step process shown in Exhibit 34 and described below:

Trip Generation for Existing Campus Land Uses

The traffic generated by the existing land uses all share the same driveways and parking lots, so it is not possible to determine from the entering and exiting traffic how much traffic is being generated by each type of user. This must be done indirectly, and described below and shown in Exhibit 35 for the Alternative 1 interim year (2025), Exhibit 36 for Alternative 1 build out year (2035), Exhibit 37 for Alternative 2 interim year (2025), and Exhibit 38 for Alternative 2 build out year (2035):

- 1) The staff of the CSUDH Child Care Center, Infant/Toddler Center, and the California Academy of Math and Science (CAMS) were contacted by phone and provided information on the percentage of their staff and students that arrived by car and parked, the percentage being dropped off by car, and those arriving by other modes. They also provided information on typical arrival and departure schedules. This information was used to estimate the trips from each of these institutions.
- 2) Because the 9th Edition of the ITE *Trip Generation Manual* does not include trip generation rates for dormitories or on-campus housing, survey data for similar facilities were needed to estimate these trip generation rates. Therefore, trip generation survey data collected at CSU Sacramento

and Cal Poly, San Luis Obispo, were used to estimate on-campus student trip generation rates for CSUDH. (see Appendix F for the original calculations)

- 3) Peak-hour trips for faculty and staff were taken from occupancy surveys at faculty/staff parking lots.
- 4) Weekday AM and PM peak-hour traffic counts were conducted at the gateways to the campus (see Intersections 1 through 9 in Exhibit 1).
- 5) The traffic from the Child Care Center, Infant/Toddler Center, CAMS, faculty & staff, and on-campus students was subtracted from the gateway counts. The residual was assumed to be the trips from off-campus students.

The imputed trips per off-campus student was compared to the trips per off-campus student from other campuses as a reasonableness check. The check showed that the results were comparable to rates measured on other campuses.

- 6) The trip generation rates from Steps 1 through 5 were then ready to be used as inputs into the forecast of traffic from these uses in the future study years.
- 7) The 2017 Master Plan was then used to determine the number of staff and students for each user group (Child Care Center, Infant/Toddler Center, CAMS, faculty & staff, and on- and off-campus CSUDH students).
- 8) The trip generation rates from Step 6 were then multiplied by the respective size of each group from Step 7 to estimate the future AM and PM trips entering and leaving the campus from user groups that already exist on campus, taking into account the anticipated change in the size of each group.

The result of Steps 1 through 8 was a forecast for future trips from existing uses that is consistent with the counts of existing traffic and with data from external sources.

Trip Generation for Proposed New Campus Land Uses

As shown in Exhibit 35 through Exhibit 38, the traffic generated by proposed new land uses cannot be based on data from the existing campus. Instead, the trips were estimated using survey data from similar land uses that already exist:

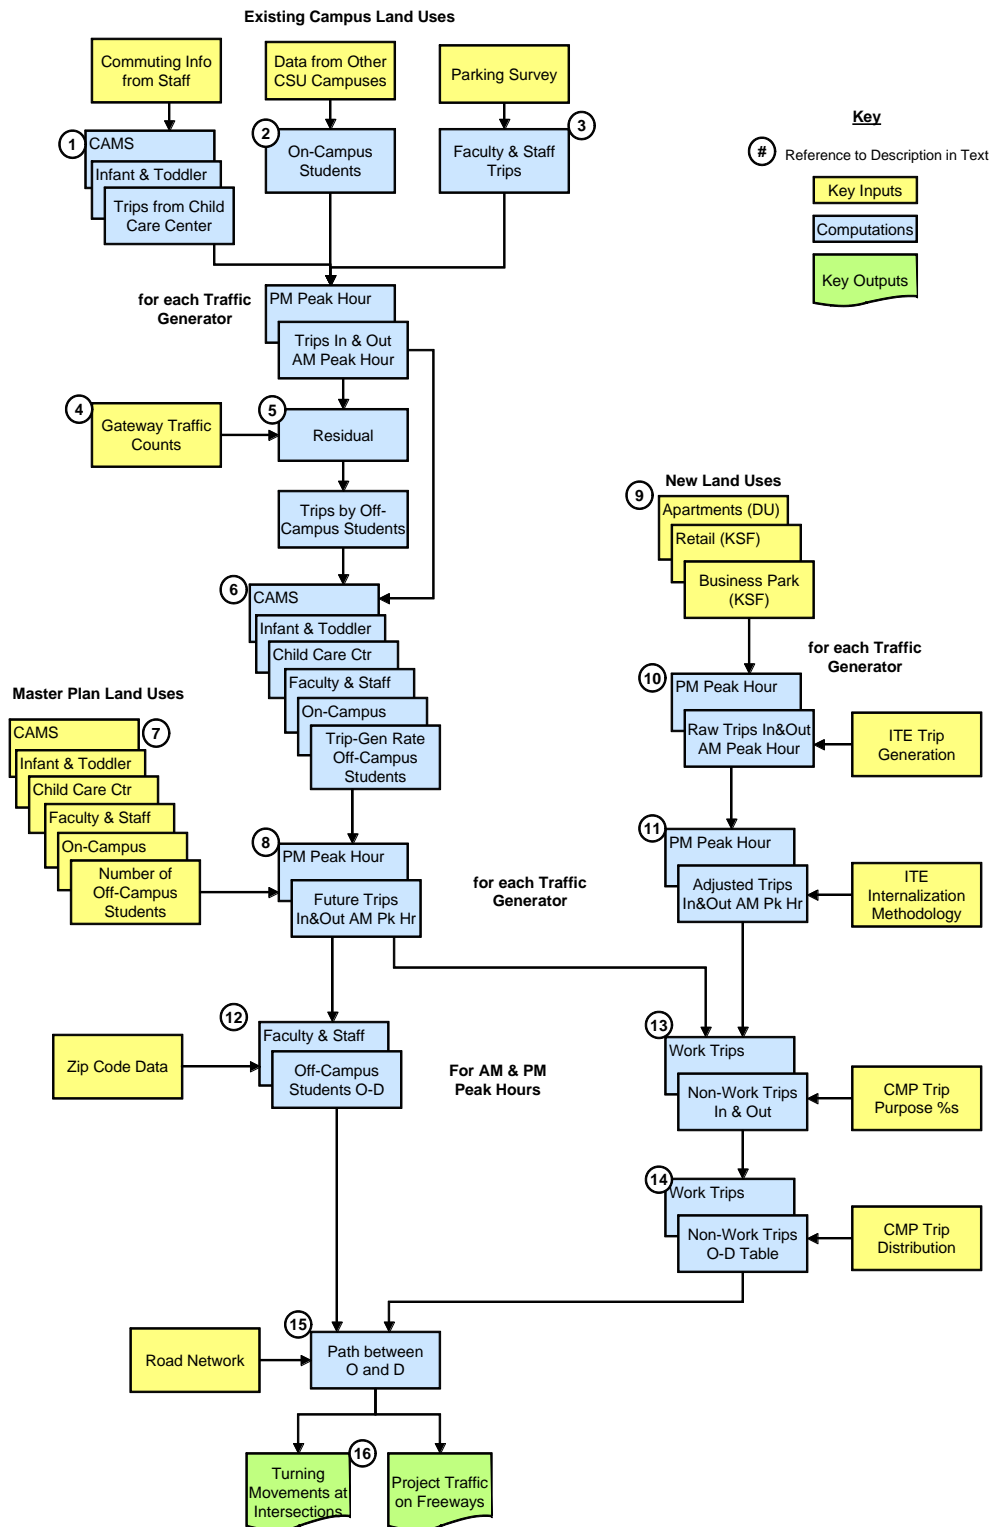

Exhibit 34: Methodology for Forecasting Project Traffic

- 9) The Master Plan contains details of the number of market-rate apartments to be developed, and the floor area of the proposed retail and business park developments.
- 10) The trips generated by the proposed new uses was estimated by multiplying the trip generation rates from the 9th Edition of the ITE *Trip Generation Manual* by the size of the proposed developments, in accordance with generally accepted traffic engineering practice.
- 11) The proposed apartments, retail, and business park uses will be within easy walking distance of each other and it can be reasonably expected that there will be trips between these uses. For example, people living in the apartments might seek jobs at the retail shops or business park, or people with jobs in the business park might self-select to live in the new nearby apartments, people in the apartments or business park may shop at the nearby retail establishments, etc. These interactions will reduce the vehicular trips generated by both the trip origin and the destination.

The unconstrained internal person trip capture rates from mixed use development from ITE¹² was used to take these trips into account. The factors applied reduced trips based on the size and type of land uses that are interacting.

Although it is likely that some CSUDH students, faculty, and staff will self-select to live in the Project market-rate apartments, there are no plans to have a formal policy or program to encourage that to happen. In the absence of such a program, the worst-case scenario was assumed, which is that no CSUDH students, faculty, and staff would live in the market-rate apartments.

Exhibit 38: Trip Generation Rates and Total Weekday Trips for 2035 with Alternative 2

Trip Distribution and Routing

The results of Steps 8 and 11 are the total number of trips entering and leaving the campus in the AM and PM peak hour for each user group. The remaining steps were to determine the location of the non-campus end of the trip and the route taken between the trip origin and destination.

- 12) The University provided the study team with information on the addresses of off-campus students, faculty, and staff, aggregated to zip code level to maintain privacy (see Exhibit 39, Exhibit 40, and Exhibit 41 respectively). This was used to create an origin-destination matrix of their trips to and from campus.
- 13) For the other user groups, such as the residents of the proposed market-rate apartments, the Los Angeles County Congestion Management Plan (CMP) reference tables stating the percentage of trips for each land use type are work trips and non-work trips were used. For example, the CMP says that 30% of the trips generated by multi-family dwellings are work trip and the remainder are non-work trips.
- 14) The CMP also contains a trip distribution matrix for use in determining the likely distribution of trip destinations for any given trip origin, depending on the trip purpose (residential or non-residential and work or non-work). For example, the CMP estimates that 3.1% of the work commute trips generated by the proposed new apartments will go to downtown Los Angeles. Applying this matrix to the work and non-work trips resulted in an origin-destination table showing the location of the non-campus-end of each trip.
- 15) Trips from all user groups were then assigned to the most likely path from their origin on campus to their destination. For many trips this route used surface streets to get to or from nearby freeway ramps.
- 16) The trips using each path were then aggregated to find the Project-related turning movements at each study intersection. The Project-related volumes were added to the background (non-Project) traffic to determine the total volume for each turning movement at each study intersection.

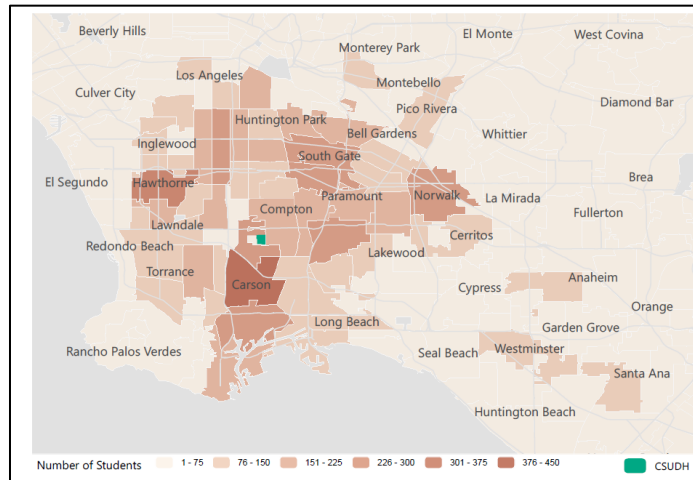

Exhibit 39: Zip Codes for Current CSUDH Students

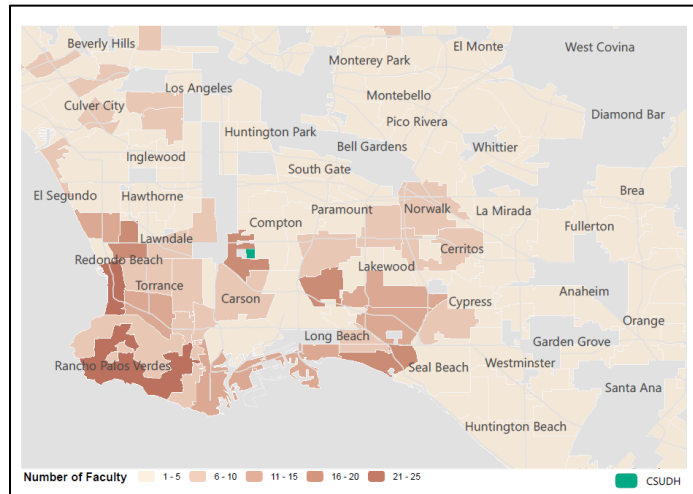

Exhibit 40: Zip Codes for Current CSUDH Faculty

campus build out parking lots in 2035). As shown, there are a total of 7,914 parking spaces in the near-term and 7,924 for 2035 that are available for spectators in on-site lots. Note that the parking requirements of the University, sports teams, the media, and stadium employees are also fully accounted for in Exhibit 43 and Exhibit 44. When reallocating parking spaces minimum parking requirements were proportionally increased with the increasing FTEs then spectator, team and media parking spots were allocated. Additional spaces to cover a similar number of spectator spaces on campus and near the StubHub Center were allocated from the business park. However, since these groups arrive before the pre-game peak hour and depart after the post-game peak hour they do not affect the analysis of peak-hour traffic conditions. Note also that part of parking lot 13 is expected to be unusable for Project parking due to hotel construction that is expected to take place on the site¹⁴.

As can be seen in Exhibit 43, and Exhibit 44, the remaining spectator parking spaces will be located off-site as shown in Exhibit 30. Approximately 2,100 spectator cars, or 21% of all spectator cars, would be assigned to off-site parking lots. ASCSC will be providing a fleet of shuttle buses from these lots to the bus drop-off area in Parking Lot 7.

Besides the park-and-ride lots, ASCSC is conducting a two-year trial of a shuttle bus system run by Long Beach Transit that would take passengers from the Blue Line and Harbor Gateway transit stations to the stadium for LA Galaxy games. This shuttle could possibly also be used for events. However, it is not certain that the system will be in place in 2019 or 2035, so for the purposes of the impact analysis no spectators were assumed to use this system.

Tickets for events at StubHub Center will be for sale on-line only. Ticket purchasers will be advised that no parking permits will be available on-site on the day of the event, and will be offered an opportunity to purchase parking passes for one of the on- or off-site parking lots. The assigned space will include directions about freeway exits (if applicable) and streets to use to get to the assigned parking space. Patrons without a pass to the specific parking lot or a valid CSU parking permit will be turned away at the parking lot entrance. This system is used with success in many sports venues in the U.S., most recently in the Golden 1 Center in Sacramento that opened in September 2016, to promote the orderly flow of traffic to and from the venue.

The temporary traffic control plans for the pre-game and post-game for the expansion are shown in Exhibit 31 and Exhibit 32, respectively.

¹⁴ This was the subject of the Home Depot Center Hotel and Training Facility Final Supplemental EIR dated in May 2005.

Exhibit 44: Allocation of Parking Spaces for 30,000-Seat Event in 2035

The number of vehicle trips generated by the Project during the peak pre-game and post-game hours are shown in Exhibit 45. For the purposes of impact analysis, it was assumed that all games would draw maximum-capacity attendance. As in the 2001 FEIR, it was assumed that 65% of the spectators at sporting events would arrive during the peak hour before the game and that 75% would depart during the peak hour after the game. This is considered a very conservative assumption, since tailgating will be permitted in the circulation aisles of some parking lots (once the parking spaces in the aisle have been filled) which will tend to cause earlier arrivals and later departures for some spectators. Tailgating is a much larger feature of NFL games than MSL games. Traffic counts taken at the Chargers game at the main entrance to Qualcomm Stadium in 2015 showed that 51% of pre-game inbound traffic occurred during the peak hour of pre-game arrivals, and 59% left during the peak hour for post-game departures¹⁵. This data supports the fact that the 65% (pre-game) and 75% (post-game) assumptions used in this study uses very conservative assumptions.

On Sundays in 2035, the Project will also generate non-game trips from on-campus students, market rate housing, retail and the business park as seen in Exhibit 46. For on-campus students, the trip rates were assumed to be the same as the week AM and PM peak hour for the pre- and post-game, respectively. For the University Village land uses, the ITE Trip Generation rates were used. For residential and retail the Sunday “Peak Hour of Generator” was used. With no better information, a 50/50 directional split was assumed for residential and retail. For the business park, the ITE 770, Business Park category did not include Sunday peak hour rates, therefore General Office category (710) for the “Peak Hour of Generator” was used with the directional split from ITE. Post-Game trips for individual land uses were assumed to be reversed from the pre-game. Finally, The Internalization factors in ITE Trip Generation Handbook, 3rd Edition, are meant for Weekday, but, internalization will still happen on Sunday and no better information was available. Therefore, the weekday internalization factors were used for Sunday.

Note that stadium employees, team personnel, and media staff arrive well before the pre-game peak hour and depart well after the post-game peak hour, so their vehicles are not included in peak-hour traffic. Note also that a small number of vehicles may be travelling in the off-peak direction, which was estimated at 1.5% of spectator car trips. This covers passenger drop-offs, including those by ride-hailing services such as Uber or Lyft.

Traffic Flow	Spectator Vehicles	Employee Vehicles	Teams & Media	Total

Exhibit 46: Total Car Trip Generation for Sunday Peak Hours in 2035

Besides car trips, the Project will generate shuttle bus trips from the park and ride lots. The peak hour bus trips from each lot are shown in Exhibit 47. Unlike the cars trips, which are one-way in each peak hour, the shuttle buses will be making round trips to and from the park and ride lots. Their trips were therefore counted in both directions.

Spectator Park and Ride Lot	Parking Spaces	Spectators	Shuttle Buses Capacity	Shuttle Buses Trips
	(A)	(B)=(A)*3	(C)	(D)=(B)/(C)
Harbor Gateway*	900	2,700	100 seats @ 80% occupancy = 80	34
Herbalife Building	600	1,800	76 seats @ 80% occupancy = 60	30
Del Amo Station	200	600	76 seats @ 80% occupancy = 60	10
Willow Station	400	1,200	76 seats @ 80% occupancy = 60	20
Total	2,100	6,300		94

* Articulated buses will serve this location. Other locations will be served by regular buses

Exhibit 47: Project Shuttle Bus Trip Generation for 30,000 Seat Event

6 Existing Plus Project Conditions

6.1 Existing Plus Project Alternative 1 Weekday Conditions

6.1.1 Forecasting Existing Plus Project Alternative 1 Weekday Traffic

Traffic volumes for the Existing Plus Project condition were developed by adding the trips generated by full buildout of the Master Plan to the existing traffic volumes. The resulting Existing Plus Project traffic volumes are shown in Exhibit 49.

6.1.2 Existing Plus Project Alternative 1 Intersection Level of Service

Exhibit 48 shows in tabular format the Existing Plus Project weekday level of service (LOS) based on the traffic volumes shown in Exhibit 49 (also see Appendix G). The LOS is also shown on maps in Exhibit 50 for the AM peak hour condition, and Exhibit 51 for the PM peak hour condition. Exhibit 52 shows the intersection impacts of the Project. As shown, the Project would have significant impacts at 14 intersections, namely

- Intersection #1, Victoria St./Drive D, during both peak hours
- Intersection #3, Victoria St./Birchknoll Dr., during PM peak hour
- Intersection #5, Central Ave./Charles Willard St., during both peak hours
- Intersection #6, Central Ave./Project Driveway/Beachey Pl., during both peak hours
- Intersection #9, University Dr./Toro Center Dr., during both peak hours
- Intersection #13, Avalon Blvd./Victoria St., during PM peak hour
- Intersection #14, Central Ave./Artesia Blvd. WB, during both peak hours
- Intersection #15, Central Ave./Albertoni St./Artesia Blvd. EB, during both peak hours
- Intersection #16, Central Ave./Victoria St., during PM peak hour
- Intersection #20, I-110 SB Off-Ramp/190th St., during both peak hours
- Intersection #22, Figueroa St./190th St./Victoria St., during both peak hours
- Intersection #24, Main St./Victoria St., during PM peak hour
- Intersection #26, Avalon Blvd./Del Amo Blvd., during PM peak hour
- Intersection #29, Central Ave./University Dr., during both peak hours

These are direct (as opposed to cumulative) impacts. The distinction between direct and cumulative impacts is discussed further in Chapter 14.

Exhibit 52: Determination of Intersection Impacts for the Existing Plus Project Alternative 1 Scenario

6.1.3 Existing Plus Project Alternative 1 Freeway Level of Service

The LOS for the study freeway segments under Existing Plus Project conditions are shown in **Error! Reference source not found.** All CMP locations were analyzed using the Demand to Capacity ratio (D/C) as required by the Los Angeles County CMP. **Error! Reference source not found.** shows that the Project would have significant impacts at seven CMP locations, namely:

- CMP Station #1033, SR 91 East of Alameda St./Santa Fe Ave., eastbound during the PM peak hour
- CMP Station #1034, SR 91 East of Cherry Ave., eastbound during the PM peak hour and westbound, during AM peak hour
- CMP Station #1046, I-110 at Manchester Blvd., northbound during the PM peak hour and southbound in the AM and PM peak hours
- CMP Station #1047, I-110 at Slauson Ave., northbound during the PM peak hour and southbound in both peak hours
- CMP Station #1066, I-405 at Santa Fe Ave., northbound during both peak hours and southbound during the PM peak hour
- CMP Station #1067, I-405 at the Carson Scales, northbound during AM and PM peak hours and southbound during the PM peak hour
- CMP Station #1068, I-405 North of Inglewood Ave. at Compton Blvd., northbound during the PM peak hour

Altogether 80 freeway segments would have significant impacts, including those that are not CMP monitoring stations. These additional locations are:

- SR-91 eastbound, Jct. Rte. 110 to Avalon Blvd., during the PM peak hour
- SR-91 eastbound, Avalon Blvd. to Central Ave., during the PM peak hour
- SR-91 eastbound, Central Ave. to Wilmington Ave., during the PM peak hour
- SR-91 eastbound, Wilmington Ave. to Alameda St., during the PM peak hour
- SR-91 eastbound, Alameda St. to Alameda St./Santa Fe Ave., during the both peak hours
- SR-91 eastbound, Alameda St./Santa Fe Ave. to Long Beach Blvd., during the PM peak hour
- SR-91 eastbound, Long Beach Blvd. to Jct. Rte. 710, during the PM peak hour
- SR-91 eastbound, Jct. Rte. 710 to Cherry Ave., during the PM peak hour
- SR-91 eastbound, Cherry Ave. to Paramount Blvd., during the PM peak hour
- SR-91 eastbound, Jct. Rte. 19 to Clark Ave., during the PM peak hour
- I-110 northbound, Sepulveda Blvd. to Carson St., during the AM peak hour
- I-110 northbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 northbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 northbound, Jct. Rte. 405 to Jct. Rte. 91, during the AM peak hour
- I-110 northbound, El Segundo Blvd. to Jct. Rte. 105, during the PM peak hour
- I-110 northbound, Century Blvd. to Manchester Ave., during the PM peak hour
- I-110 northbound, Manchester Ave. to Florence Ave., during the PM peak hour
- I-110 northbound, Florence Ave. to Gage Ave., during the PM peak hour
- I-110 northbound, Gage Ave. to Slauson Ave., during the PM peak hour

- I-110 northbound, Slauson Ave. to 51st St., during the PM peak hour
- I-110 northbound, 51st St. to Vernon Ave., during the PM peak hour
- I-110 northbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the PM peak hour
- I-405 northbound, Lakewood Blvd. to Cherry Ave., during the AM peak hour
- I-405 northbound, Cherry Ave. to Orange Ave., during the AM peak hour
- I-405 northbound, Orange Ave. to Atlantic Ave., during the both peak hours
- I-405 northbound, Atlantic Ave. to Long Beach Blvd, during the both peak hours
- I-405 northbound, Jct. Rte. 710 to Alameda St., during the both peak hours
- I-405 northbound, Alameda St. to Wilmington Ave., during the both peak hours
- I-405 northbound, Wilmington Ave. to Carson St., during the both peak hours
- I-405 northbound, Carson St. to Avalon Blvd., during the both peak hours
- I-405 northbound, Avalon Blvd. to Jct. Rte. 110, during the both peak hours
- I-405 northbound, Jct. Rte. 110 to Vermont Ave., during the PM peak hour
- I-405 northbound, Vermont Ave. to Normandie Ave., during the AM peak hour
- I-405 northbound, Normandie Ave. to Western Ave., during the both peak hours
- I-405 northbound, Western Ave. to Crenshaw Blvd., during the both peak hours
- I-405 northbound, Crenshaw Blvd. to Artesia Blvd., during the both peak hours
- I-405 northbound, Inglewood Ave. to Rosecrans Ave., during the PM peak hour
- SR-91 westbound, Jct. Rte. 110 to Avalon Blvd., during the both peak hours
- SR-91 westbound, Avalon Blvd. to Central Ave., during the AM peak hour
- SR-91 westbound, Central Ave. to Wilmington Ave., during the AM peak hour
- SR-91 westbound, Wilmington Ave. to Alameda St., during the AM peak hour
- SR-91 westbound, Alameda St. to Alameda St./Santa Fe Ave., during the AM peak hour
- SR-91 westbound, Long Beach Blvd. to Jct. Rte. 710, during the AM peak hour
- SR-91 westbound, Jct. Rte. 710 to Cherry Ave., during the AM peak hour
- SR-91 westbound, Cherry Ave. to Paramount Blvd., during the AM peak hour
- SR-91 westbound, Paramount Blvd. to Downey Ave., during the AM peak hour
- SR-91 westbound, Downey Ave. to Jct. Rte. 19, during the AM peak hour
- SR-91 westbound, Jct. Rte. 19 to Clark Ave., during the both peak hours
- SR-91 westbound, Clark Ave. to Bellflower Blvd., during the AM peak hour
- SR-91 westbound, Bellflower Blvd. to Jct. Rte. 605, during the AM peak hour
- I-110 southbound, Sepulveda Blvd. to Carson St., during the PM peak hour
- I-110 southbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 southbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 southbound, Jct. Rte. 405 to Jct. Rte. 91, during the both peak hours

- I-110 southbound, Redondo Beach Blvd. to Rosecrans Ave., during the AM peak hour
- I-110 southbound, Rosecrans Ave. to El Segundo Blvd., during the both peak hours
- I-110 southbound, Century Blvd. to Manchester Ave., during the both peak hours
- I-110 southbound, Manchester Ave. to Florence Ave., during the both peak hours
- I-110 southbound, Florence Ave. to Gage Ave., during the both peak hours
- I-110 southbound, Gage Ave. to Slauson Ave., during the both peak hours
- I-110 southbound, Slauson Ave. to 51st St., during the both peak hours
- I-110 southbound, 51st St. to Vernon Ave., during the both peak hours
- I-110 southbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the AM peak hour
- I-110 southbound, Martin Luther King Jr. Blvd. to Exposition Blvd., during the both peak hours
- I-405 southbound, Cherry Ave. to Orange Ave., during the PM peak hour
- I-405 southbound, Orange Ave. to Atlantic Ave., during the PM peak hour
- I-405 southbound, Atlantic Ave. to Long Beach Blvd, during the PM peak hour
- I-405 southbound, Long Beach Blvd to Jct. Rte. 710, during the PM peak hour
- I-405 southbound, Jct. Rte. 710 to Alameda St., during the PM peak hour
- I-405 southbound, Alameda St. to Wilmington Ave., during the PM peak hour
- I-405 southbound, Wilmington Ave. to Carson St., during the PM peak hour
- I-405 southbound, Carson St. to Avalon Blvd., during the PM peak hour
- I-405 southbound, Avalon Blvd. to Jct. Rte. 110, during the PM peak hour
- I-405 southbound, Jct. Rte. 110 to Vermont Ave., during the both peak hours
- I-405 southbound, Vermont Ave. to Normandie Ave., during the PM peak hour
- I-405 southbound, Normandie Ave. to Western Ave., during the both peak hours
- I-405 southbound, Western Ave. to Crenshaw Blvd., during the both peak hours
- I-405 southbound, Crenshaw Blvd. to Artesia Blvd., during the both peak hours
- I-405 southbound, Artesia Blvd. to Hawthorne Blvd., during the AM peak hour
- I-405 southbound, Hawthorne Blvd. to Inglewood Ave., during the both peak hours

These are direct (as opposed to cumulative) impacts. The distinction between direct and cumulative impacts is discussed further in Chapter 14.

Note: D/C is demand-to-capacity ratio.

Exhibit 54: Determination of Freeway Impact for Existing Plus Project Alternative 1 Scenario (continued)

6.1.4 Determination of Pedestrian Impacts

The CSU system has defined a significant pedestrian impact as a situation where,

- *“A project fails to provide safe pedestrian connections between campus buildings and adjacent streets and transit facilities. Or*
- *A project significantly disrupts existing or planned pedestrian facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”*

Based on this standard, the Project would not impose such disruptions and so would not have any significant pedestrian impacts.

6.1.5 Determination of Bicycle Impacts

The CSU system has defined a significant bicycle impact as a situation where, *“A project significantly disrupts existing or planned bicycle facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”* Based on this standard, the Project would not impose such disruptions and so would not have any significant bicycle impacts.

6.1.6 Determination of Transit Impacts

CSU guideline state that a significant transit impact would occur if, *“A project significantly disrupts existing or planned transit facilities and services or significantly conflicts with applicable transit plans, guidelines, policies, or standards.”* Based on this standard, the Project would not impose such disruptions and so would not have any significant transit impacts.

As a supplement to the transit analysis procedure described in the CSU Transportation Impact Study Manual, based on the substantial transit services available in the CSUDH area and their potential to reduce project-related vehicle trips, an analysis was performed of the capacity of the local transit system to accommodate an increase in passengers arising from the Project.

The analysis was conducted in three steps. First, the number of additional transit trips that would be generated by the proposed Project was estimated using available mode share data; that is, available data illustrating the percentage of travel utilizing transit. Thereafter, the capacity of the area’s transit systems to accommodate the additional passengers was assessed. The final step was to compare the number of new trips attributable to the Project with the available capacity of the system to determine if the increase in passengers attributable to the Project could be accommodated by the system. Because CSU has not developed criteria specific to a transit capacity analysis, and due to the location of the proposed Project in Los Angeles County, for the limited purposes of this analysis, the LA Metro standards¹⁶ relative to passenger loading were used. The LA Metro standards are shown in Exhibit 55.

¹⁶ *Transit Service Policy*. Los Angeles County Metropolitan Transportation Authority, October 2015. Pg 50. Transit-related thresholds to be applied at other CSU campuses throughout the state will vary dependent upon multiple factors, including project location.

Frequency Range in Minutes	Passengers per Seat
1 - 10	1.40
11 - 20	1.30
21 - 40	1.20
41 - 60	1.10
60+	1.00

Exhibit 55: Loading Standards for Weekday AM and PM Periods

Project Transit Demand Estimate

Several sources of information were reviewed regarding the transit mode share at CSUDH and for the City of Carson more generally. Based on data from the CSUDH Transportation Services Department, approximately 1% of students purchase transit access passes. Thus, based on this data point, approximately 2% of CSUDH students utilize public transit to travel to/from the campus. In addition to the CSUDH Transportation Services Department data, the LA County CMP Transit Impact Methodology was reviewed. The methodology recommends assuming 1.4 person trips per car trip and 3.4% of person-trips by transit for locations not within ¼ mile of transit centers or rail transit. These percentages are consistent with U.S. Census data¹⁷ for the City of Carson, which reports a 3.4% transit mode share. The higher of the two sources, i.e. the 3.4% share from the CMP rather than the 1% from the CSU data, was used to ensure a conservative estimate of Project impacts.

Using the LA County CMP methodology to conduct the analysis, for every 100 car-trips to the campus there would be 4.9 transit trips. This ratio of 4.49 transit trips for every 100 car trips was combined with the auto trip generation rate for the various Project components to identify a transit trip generation rate for the proposed Project (see Exhibit 56).

Land Use (ITE Code)	Unit	Transit Trips per 100 Car Trips	AM Peak Hour		PM Peak Hour	
			Auto Rate	Transit Rate	Rate	Transit Rate
			(A)	(B)	(C)=(A)*(B)/100	(D)
On-Campus Student	Students	4.9	0.033	0.002	0.093	0.005
Off-Campus Student	Students	4.9	0.151	0.007	0.161	0.008
Faculty and Staff	Employee	4.9	0.067	0.003	0.013	0.001
High School (530)	Students	4.9	0.430	0.021	0.130	0.006
Child Care Centers	Students	4.9	0.962	0.047	0.962	0.047
Market Rate Housing (220)	Dwelling Unit	4.9	0.51	0.025	0.62	0.030
Retail (820)	1,000 sq. ft.	4.9	1.58	0.078	6.07	0.297
Business Park (770)	1,000 sq. ft.	4.9	1.34	0.066	1.21	0.059

Exhibit 56: Computation of Transit Trip Generation Rate

The proposed Project transit trip generation rates were then applied to the number of units in each component of the Project (students, market-rate apartments, etc.) to estimate the number of peak-hour transit trips that would be generated by the Project. This number is shown in Exhibit 57. As shown, the

¹⁷ U.S. Census Bureau American FactFinder website, accessed November 8, 2018

exhibit distinguishes direction of travel, with some project components generating inbound trips in the morning and outbound trips in the evening, while other components generate trips in the opposite direction. The analysis ultimately focused on Project trips in the peak direction, which is the relevant timeframe for assessing demand and capacity. Peak direction was identified in Exhibit 57 as inbound towards the campus in the AM peak hour and outbound away from the campus in the PM peak hour. If the peak hour peak direction demand can be accommodated, then the non-peak direction can also be accommodated. As shown on Exhibit 57, the Project would generate a net increase of 134 transit trips in the AM peak hour, and 154 transit trips in the PM peak hour.

Land Use (ITE Code)	Unit	Existing Conditions					2035 Alternative 1				
		Number of Units	AM Transit Trip-Gen Rate	AM Peak Hour Transit Trips	PM Transit Trip-Gen Rate	PM Peak Hour Transit Trips	Number of Units	AM Peak Hour Transit Trips	Net Increase in Trips in AM (i.e. Project trips)	PM Peak Hour Transit Trips	Net Increase in Trips in PM (i.e. Project trips)

Exhibit 57: Project Peak-Hour Transit Trips

The next step in the analysis was to determine how Project transit trips would be distributed among the various transit lines serving the CSUDH campus. This determination was made based on the SCAG travel demand model¹⁸. Based on the model, the total number of arriving or departing Project trips was distributed among the transit lines as shown in Exhibit 58¹⁹. Since the SCAG model only depicts AM transit operations and does not explicitly represent PM transit operations, the reverse of the AM peak directionality was used for the PM. The resulting number of passengers for each transit system is the number of Project passengers (i.e., the Project transit demand) that would need to be accommodated by each respective system, as shown in Exhibit 58.

¹⁸ The SCAG travel demand model does not explicitly represent the Toro Shuttle. The Toro Shuttle goes between the Blue Line station and the campus, as does Metro Route 130. Accordingly, for purposes of the analysis, the demand for the Toro Shuttle was included as part of the Route 130 demand in the model.

¹⁹ The number of AM arriving trips in Exhibit 59 is slightly different from Exhibit 58 due to rounding.

Transit Operator	Route	% of Campus Transit Arrivals	AM Arriving Project Passengers	% of Campus Transit Departures	PM Departing Project Passengers
City of Carson	A	20.1%	27	20%	31

Exhibit 58: Project Transit Trips by Transit Route

Comparing Project Trips to the Available Transit Capacity

Once the Project peak hour transit trips were estimated, the next step was to compute the available capacity of each route. This is done in Exhibit 59, as explained below (the letters preceding the description correspond to columns in the exhibit):

Capacity of Transit

- A. Peak hour headways were obtained from each transit route’s schedule.
- B. The number of seats per vehicle were obtained directly from the transit agency, except for Metro routes, which were assumed as average seating capacity of a standard 40 feet municipal bus.
- C. The peak hour seated capacity was calculated by dividing the number of seats by the headway in hour. For example, if the number of seats is 40 and the headway is 30 minutes, the hourly seated capacity is 80 seats.

Existing Transit Operations

- D. The load factor standard was taken from Metro’s Transit Service Policy, as discussed earlier in Exhibit 55.
- E. The Existing AM Peak Hour load for City of Carson Transit was estimated from its monthly ridership obtained from the City of Carson. For the remaining transit lines the peak hour maximum load near the campus was obtained from the SCAG travel demand model.
- F. The Existing AM Peak Hour load factor was then calculated by dividing the existing peak hour load by the peak hour seated capacity.

Existing Plus Project Transit Demand

- G. The number of new AM peak hour transit passengers generated by the Project for each route was taken from Exhibit 58.

- H. The Existing AM Peak Hour Plus Project passenger load was then estimated by adding the Project riders to the existing peak hour load.
- I. The Existing AM Peak Hour Plus Project load factor was then estimated by dividing the Existing Plus Project transit load by peak hour seated capacity.

Steps E through I were repeated for the PM Peak hour in steps J through N.

The final two columns in Exhibit 59 compare the load factors for the Existing and Existing Plus Project condition with the load factor standard shown in Column D. The conclusion was that there are no existing deficiencies in the transit system serving the CSUDH campus and that the addition of the Project would not cause any deficiencies to arise. Therefore, the Project would have no significant transit capacity impacts.

The Existing Plus Alternative 1 scenario is the worst case in terms of possible transit impacts for several reasons:

- Transit service providers monitor demand growth and add capacity where needed. That means that the Existing Conditions study year represents the lowest capacity that the system is likely to have in the planning horizon of this study.
- Alternative 2 has more off-campus students commuting to CSUDH than Alternative 2, so the highest demand occurs in this scenario.

Since there would be no transit capacity impacts in the worse-case scenario, we conclude that there would be not transit capacity impacts in any of the other scenarios.

Route	Headway (minutes)	Seats per vehicle	Peak Hour Seated Capacity	Load Factor Standard (maximum allowable)	Existing AM Peak Hour Load	Existing AM Load Factor	AM Arriving Project Passengers	AM Load with Project	AM Load Factor with Project	Existing PM Peak Hour Load	Existing PM Load Factor	PM Departing Project Passengers	PM Load with Project	PM Load Factor with Project	Existing Deficiency? Exhibit 59: Determination of Plus Project Transit Capacity Impacts

6.2 Existing Plus Project Alternative 2 Weekday Conditions

6.2.1 Forecasting Existing Plus Project Alternative 2 Weekday Traffic

Traffic volumes for the Existing Plus Project condition were developed by adding the trips generated by full buildout of the Master Plan to the existing traffic volumes. The resulting Existing Plus Project traffic volumes are shown in Exhibit 61.

6.2.2 Existing Plus Project Alternative 2 Intersection Level of Service

Exhibit 60 shows in tabular format the Existing Plus Project weekday level of service (LOS) based on the traffic volumes shown in Exhibit 61 (also see Appendix H). The LOS is also shown on maps in Exhibit 62 for the AM peak hour condition, and Exhibit 63 for the PM peak hour condition. Exhibit 64 shows the intersection impacts of the Project. As shown, the Project would have significant impacts at 14 intersections, namely

- Intersection #1, Victoria St./Drive D, during both peak hours
- Intersection #3, Victoria St./Birchknoll Dr., during PM peak hour
- Intersection #5, Central Ave./Charles Willard St., during both peak hours
- Intersection #6, Central Ave./Project Driveway/Beachey Pl., during both peak hours
- Intersection #9, University Dr./Toro Center Dr., during both peak hours
- Intersection #13, Avalon Blvd./Victoria St., during PM peak hour
- Intersection #14, Central Ave./Artesia Blvd. WB, during both peak hours
- Intersection #15, Central Ave./Albertoni St./Artesia Blvd. EB, during both peak hours
- Intersection #16, Central Ave./Victoria St., during PM peak hour
- Intersection #20, I-110 SB Off-Ramp/190th St., during both peak hours
- Intersection #22, Figueroa St./190th St./Victoria St., during both peak hours
- Intersection #24, Main St./Victoria St., during PM peak hour
- Intersection #26, Avalon Blvd./Del Amo Blvd., during PM peak hour
- Intersection #29, Central Ave./University Dr., during both peak hours

These are direct (as opposed to cumulative) impacts. The distinction between direct and cumulative impacts is discussed further in Chapter 14.

Exhibit 64: Determination of Intersection Impacts for the Existing Plus Project Alternative 2 Scenario

6.2.3 Existing Plus Project Alternative 2 Freeway Level of Service

The LOS for the study freeway segments under Existing Plus Project conditions are shown in Exhibit 65. All CMP locations were analyzed using the Demand to Capacity ratio (D/C) as required by the Los Angeles County CMP. Exhibit 66 shows that the Project would have significant impacts at seven locations, namely:

- CMP Station #1033, SR 91 East of Alameda St./Santa Fe Ave., eastbound during the PM peak hour
- CMP Station #1034, SR 91 East of Cherry Ave., eastbound during the PM peak hour and westbound, during AM peak hour
- CMP Station #1046, I-110 at Manchester Blvd., northbound during the PM peak hour and southbound during both peak hours
- CMP Station #1047, I-110 at Slauson Ave., northbound during the PM peak hour and southbound during the AM peak hour
- CMP Station #1066, I-405 at Santa Fe Ave., northbound during both peak hours and southbound during the PM peak hour
- CMP Station #1067, I-405 at the Carson Scales, northbound and southbound during the PM peak hour
- CMP Station #1068, I-405 North of Inglewood Ave. at Compton Blvd., northbound during the AM peak hour

Altogether 79 freeway segments would have significant impacts, including those that are not CMP monitoring stations. These additional locations are:

- SR-91 eastbound, Jct. Rte. 110 to Avalon Blvd., during the PM peak hour
- SR-91 eastbound, Avalon Blvd. to Central Ave., during the PM peak hour
- SR-91 eastbound, Central Ave. to Wilmington Ave., during the PM peak hour
- SR-91 eastbound, Wilmington Ave. to Alameda St., during the PM peak hour
- SR-91 eastbound, Alameda St. to Alameda St./Santa Fe Ave., during the both peak hours
- SR-91 eastbound, Long Beach Blvd. to Jct. Rte. 710, during the PM peak hour
- SR-91 eastbound, Jct. Rte. 19 to Clark Ave., during the PM peak hour
- I-110 northbound, Sepulveda Blvd. to Carson St., during the AM peak hour
- I-110 northbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 northbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 northbound, Jct. Rte. 405 to Jct. Rte. 91, during the AM peak hour
- I-110 northbound, El Segundo Blvd. to Jct. Rte. 105, during the PM peak hour
- I-110 northbound, Century Blvd. to Manchester Ave., during the PM peak hour
- I-110 northbound, Florence Ave. to Gage Ave., during the PM peak hour
- I-110 northbound, Slauson Ave. to 51st St., during the PM peak hour
- I-110 northbound, 51st St. to Vernon Ave., during the PM peak hour
- I-110 northbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the PM peak hour
- I-405 northbound, Lakewood Blvd. to Cherry Ave., during the AM peak hour
- I-405 northbound, Cherry Ave. to Orange Ave., during the AM peak hour

- I-405 northbound, Orange Ave. to Atlantic Ave., during the both peak hours
- I-405 northbound, Atlantic Ave. to Long Beach Blvd, during the PM peak hour
- I-405 northbound, Alameda St. to Wilmington Ave., during the both peak hours
- I-405 northbound, Wilmington Ave. to Carson St., during the both peak hours
- I-405 northbound, Carson St. to Avalon Blvd., during the both peak hours
- I-405 northbound, Jct. Rte. 110 to Vermont Ave., during the PM peak hour
- I-405 northbound, Vermont Ave. to Normandie Ave., during the AM peak hour
- I-405 northbound, Normandie Ave. to Western Ave., during the both peak hours
- I-405 northbound, Western Ave. to Crenshaw Blvd., during the both peak hours
- I-405 northbound, Crenshaw Blvd. to Artesia Blvd., during the both peak hours
- SR-91 westbound, Jct. Rte. 110 to Avalon Blvd., during the both peak hours
- SR-91 westbound, Avalon Blvd. to Central Ave., during the AM peak hour
- SR-91 westbound, Central Ave. to Wilmington Ave., during the AM peak hour
- SR-91 westbound, Wilmington Ave. to Alameda St., during the AM peak hour
- SR-91 westbound, Alameda St. to Alameda St./Santa Fe Ave., during the AM peak hour
- SR-91 westbound, Long Beach Blvd. to Jct. Rte. 710, during the AM peak hour
- SR-91 westbound, Jct. Rte. 710 to Cherry Ave., during the AM peak hour
- SR-91 westbound, Paramount Blvd. to Downey Ave., during the AM peak hour
- SR-91 westbound, Downey Ave. to Jct. Rte. 19, during the AM peak hour
- SR-91 westbound, Jct. Rte. 19 to Clark Ave., during the AM peak hour
- SR-91 westbound, Clark Ave. to Bellflower Blvd., during the AM peak hour
- SR-91 westbound, Bellflower Blvd. to Jct. Rte. 605, during the AM peak hour
- I-110 southbound, Sepulveda Blvd. to Carson St., during the PM peak hour
- I-110 southbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 southbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 southbound, Jct. Rte. 405 to Jct. Rte. 91, during the both peak hours
- I-110 southbound, Redondo Beach Blvd. to Rosecrans Ave., during the AM peak hour
- I-110 southbound, Rosecrans Ave. to El Segundo Blvd., during the both peak hours
- I-110 southbound, Century Blvd. to Manchester Ave., during the both peak hours
- I-110 southbound, Florence Ave. to Gage Ave., during the both peak hours
- I-110 southbound, Slauson Ave. to 51st St., during the both peak hours
- I-110 southbound, 51st St. to Vernon Ave., during the AM peak hour
- I-110 southbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the AM peak hour
- I-110 southbound, Martin Luther King Jr. Blvd. to Exposition Blvd., during the both peak hours
- I-405 southbound, Cherry Ave. to Orange Ave., during the PM peak hour

- I-405 southbound, Orange Ave. to Atlantic Ave., during the PM peak hour
- I-405 southbound, Atlantic Ave. to Long Beach Blvd, during the PM peak hour
- I-405 southbound, Long Beach Blvd to Jct. Rte. 710, during the PM peak hour
- I-405 southbound, Alameda St. to Wilmington Ave., during the PM peak hour
- I-405 southbound, Wilmington Ave. to Carson St., during the PM peak hour
- I-405 southbound, Carson St. to Avalon Blvd., during the PM peak hour
- I-405 southbound, Jct. Rte. 110 to Vermont Ave., during the both peak hours
- I-405 southbound, Vermont Ave. to Normandie Ave., during the PM peak hour
- I-405 southbound, Normandie Ave. to Western Ave., during the both peak hours
- I-405 southbound, Western Ave. to Crenshaw Blvd., during the both peak hours
- I-405 southbound, Crenshaw Blvd. to Artesia Blvd., during the both peak hours
- I-405 southbound, Artesia Blvd. to Hawthorne Blvd., during the AM peak hour
- I-405 southbound, Hawthorne Blvd. to Inglewood Ave., during the PM peak hour

These are direct (as opposed to cumulative) impacts. The distinction between direct and cumulative impacts is discussed further in Chapter 14.

6.2.4 Determination of Pedestrian Impacts

The CSU system has defined a significant pedestrian impact as a situation where,

- *“A project fails to provide safe pedestrian connections between campus buildings and adjacent streets and transit facilities. Or*
- *A project significantly disrupts existing or planned pedestrian facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”*

Based on this standard, the Project would not impose such disruptions and so would not have any significant pedestrian impacts.

6.2.5 Determination of Bicycle Impacts

The CSU system has defined a significant bicycle impact as a situation where, *“A project significantly disrupts existing or planned bicycle facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”* Based on this standard, the Project would not impose such disruptions and so would not have any significant bicycle impacts.

6.2.6 Determination of Transit Impacts

CSU guideline state that a significant transit impact would occur if, *“A project significantly disrupts existing or planned transit facilities and services or significantly conflicts with applicable transit plans, guidelines, policies, or standards.”* Based on this standard, the Project would not impose such disruptions and so would not have any significant transit impacts. The Project would also not have any transit capacity impacts, as was shown earlier in Section 6.1.6.

Exhibit 66: Determination of Freeway Impact for Existing Plus Project Alternative 2 Scenario (continued)

6.3 Existing Sunday with 30,000-Seats Conditions

6.3.1 Forecasting Existing Sunday with 30,000-Seats Traffic

Traffic volumes for the 2017 Plus Project condition were developed adding in the traffic for a 30,000-seat event to the existing Sunday traffic counts. The resulting 2017 Plus Project traffic volumes are shown in Exhibit 69 for the pre-event hour and in Exhibit 70 for the post-event hour.

6.3.2 Existing Sunday with 30,000-Seats Intersection Level of Service

Exhibit 68 shows in tabular format the 2019 Plus Project Sunday level of service (LOS) based on the traffic volumes shown in Exhibit 69 and Exhibit 70 (also see Appendix I). The LOS is also shown on maps in Exhibit 71, for the pre-game peak hour condition, and Exhibit 72 for the post-game peak hour condition. Exhibit 73 shows the results of the analysis; that there are no impacts to the intersections for 30,000 seat-conditions.

6.3.3 Determination of Freeway Impacts

As stated earlier, Caltrans' traffic impact analysis guidelines focus on weekday peak periods. The lack of forecasts for Sunday traffic, lack of LOS thresholds for Sundays, lack of Sunday trip generation rates for most land uses, etc. preclude a typical analysis of freeway impacts. Instead, the intersection analysis described in the previous section for the additional 3,000 seats was check to identify any locations where the Project would add more than 150 cars (the threshold for analysis). This was found to occur at only one location, namely SR-91 Eastbound. Exhibit 67 below compares Sunday traffic volumes²⁰ on SR-91 to the capacity of the freeway. As can be seen in the exhibit, the freeway is at most only about half full on Sundays and can easily accommodate another 170 trips (the Project's addition).

Exhibit 67: Comparison of Sunday Freeway Traffic to Capacity

²⁰ This data comes from PeMS, Caltrans' system of embedded loops

6.3.4 Determination of Pedestrian Impacts

The CSU system has defined a significant pedestrian impact as a situation where,

- *“A project fails to provide safe pedestrian connections between campus buildings and adjacent streets and transit facilities. Or*
- *A project significantly disrupts existing or planned pedestrian facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”*

Based on this standard the 30,000-seat game does not impose any significant pedestrian impacts since the 30,000-seat game will include temporary control of intersections by traffic control officers who will be able to stop traffic to allow pedestrians to safely cross the street when going to and from the stadium.

The 30,000-seat game does not involve any construction activities that would disrupt any existing or planned pedestrian facilities.

6.3.5 Determination of Bicycle Impacts

The CSU system has defined a significant bicycle impact as a situation where, *“A project significantly disrupts existing or planned bicycle facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”* Based on this standard the 30,000-seat game does not impose any significant bicycle impacts since the 30,000-seat game does not involve any construction activities that would it disrupt any existing or planned bicycle facilities. The 30,000-seat game will include temporary control of intersections by traffic control officers whose presence will make the streets around StubHub Center safer for bicyclists than streets that are unsupervised.

6.3.6 Determination of Transit Impacts

CSU guideline state that a significant transit impact would occur if, *“A project significantly disrupts existing or planned transit facilities and services or significantly conflicts with applicable transit plans, guidelines, policies, or standards.”* Based on this standard the 30,000-seat game does not impose any significant transit impacts since it would not disrupt any existing or planned transit facilities. The 30,000-seat game will complement the transit system by providing shuttle buses from transit centers to the stadium.

Exhibit 73: Determination of Intersection Impact for the Existing Sunday with 30,000 Seats

7 2019 Sunday (27,000 Seats) Conditions

7.1 Forecasting 2019 Sunday (27,000 Seats) Traffic

Traffic volumes for the 2019 No Project condition were developed by factoring up the existing Sunday traffic counts using the growth factor from the LA-CMP and then adding in the traffic for a 27,000-seat event. The resulting 2019 No Project traffic volumes are shown in Exhibit 75 for pre-event hour and Exhibit 57 for the post event hour.

7.2 2019 Sunday (27,000 Seats) Intersection Level of Service

Exhibit 74 shows in tabular format the 2019 Sunday No Project level of service (LOS) based on the traffic volumes shown in Exhibit 75 and Exhibit 57 (also see Appendix J). The LOS is also shown on maps in Exhibit 58, for the pre-game peak hour condition, and Exhibit 78 for the post-game peak hour condition. As can be seen in the exhibit, all intersections are expected to meet the target LOS of D or better.

8 2019 Sunday with 30,000-Seats Conditions

8.1 Forecasting 2019 Sunday with 30,000-Seat Traffic

Traffic volumes for the 2019 Plus Project condition were developed by factoring up the existing Sunday traffic counts using the growth factor from the LA-CMP and then adding in the traffic for a 30,000-seat event. The resulting 2019 Plus Project traffic volumes are shown in Exhibit 80 for the pre-game peak hour and Exhibit 81 for the post-game peak hour.

8.2 2019 Sunday with 30,000-Seat Intersection Level of Service

Exhibit 79 shows in tabular format the 2019 Plus Project Sunday level of service (LOS) based on the traffic volumes shown in Exhibit 80 and Exhibit 81 (also see Appendix K). The LOS is also shown on maps in Exhibit 82, for the pre-game peak hour condition, and Exhibit 83 for the post-game peak hour condition. Exhibit 84 shows that there are no significant impacts to study intersections from the additional 3,000 seats.

8.3 Determination of Pedestrian Impacts

The CSU system has defined a significant pedestrian impact as a situation where,

- *“A project fails to provide safe pedestrian connections between campus buildings and adjacent streets and transit facilities. Or*
- *A project significantly disrupts existing or planned pedestrian facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”*

Based on this standard, the 30,000-seat game does not impose any significant pedestrian impacts. The 30,000-seat game will include temporary control of intersections by traffic control officers who will be able to stop traffic to allow pedestrians to safely cross the street when going to and from the stadium. In addition, the 30,000-seat game does not involve any construction activities that would disrupt any existing or planned pedestrian facilities.

8.4 Determination of Bicycle Impacts

The CSU system has defined a significant bicycle impact as a situation where, *“A project significantly disrupts existing or planned bicycle facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”* Based on this standard the 30,000-seat game does not impose any significant bicycle impacts since the 30,000-seat game does not involve any construction activities that would it disrupt any existing or planned bicycle facilities. The 30,000-seat game will include temporary control of intersections by traffic control officers whose presence will make the streets around StubHub Center safer for bicyclists than streets that are unsupervised.

8.5 Determination of Transit Impacts

CSU guideline state that a significant transit impact would occur if, *“A project significantly disrupts existing or planned transit facilities and services or significantly conflicts with applicable transit plans, guidelines, policies, or standards.”* Based on this standard the 30,000-seat game does not impose any significant transit impacts since it would not disrupt any existing or planned transit facilities. The 30,000-seat game will complement the transit system by providing shuttle buses from transit centers to the stadium

Exhibit 84: Determination of Intersection Impact for the 2019 Sunday with 30,000 Seats

9 2025 No Project Conditions

9.1 Forecasting 2025 Weekday No Project Traffic

Traffic volumes for the 2025 No Project condition were developed by factoring up the existing weekday traffic counts using the growth factor from the LA-CMP and then adding in the traffic for existing, known, and reasonably foreseeable projects (see Exhibit 85).

Project Location	Building Size	Project Description
21521-21601 S Avalon Blvd	357 apartment units, 30,700 sqft. commercial	The Avalon includes new apartment units and a 749 space parking garage along with new retail, grocery, and restaurant uses.
1281 E University Dr	47,000 sqft.	University Village includes construction of new neighborhood retail center. The design incorporates a Tuscan architectural design and includes a corner plaza, pedestrian pathways, and abundant landscaping.
16100 S Avalon Blvd	44,000 sqft.	Construction of a new warehouse with a 983 sf caretaker's unit to be operated by the company Public Storage.
18701 S Wilmington Ave	443,000 sqft.	This Northrup Gruman redevelopment at the Dominguez Technology Center includes removal of existing office buildings and construction of new distribution warehouses.
200 E Alondra Blvd	137,000 sqft. Warehouse, 10,000 sqft. office	Construction of a new Class-A warehouse building with office space.
17706 S Main St	94,731 sqft. Warehouse, 15,061 sqft. office	Construction of a new warehouse building.
Hotel/Training Facility at StubHub Center	200 hotel rooms, 5,000 sqft. restaurant, 10,000 sqft. meeting space, 110,000 sqft. training facilities	The hotel/training facility will comprise a number of different facilities, including a hotel with restaurant and meeting rooms, dormitories for youth athletes, administrative offices, an athletes performance center, and a field house training facility.

Exhibit 85: Background Projects Assumed for Both the No Project and Plus Project Conditions

The resulting 2025 No Project traffic volumes are shown in Exhibit 87.

9.2 2025 Weekday No Project Intersection Level of Service

Exhibit 86 shows in tabular format the 2025 No Project weekday level of service (LOS) based on the traffic volumes shown in Exhibit 87 (also see Appendix L). The LOS is also shown on maps in Exhibit 88 for the AM peak hour condition, and Exhibit 89 for the PM peak hour condition. Seven intersections would not meet the LOS target of D or better under 2025 No Project conditions, namely:

- Intersection #1, Victoria Ave./Drive D, during the PM peak hour
- Intersection #5, Central Ave./Charles Willard St., during the AM peak hour
- Intersection #20, I-110 SB Off-Ramp/190th St, during both peak hours
- Intersection #24, Main St./Victoria St., during the PM peak hour
- Intersection #26, Avalon Blvd./Del Amo Blvd., during the PM peak hour
- Intersection #33, W. Artesia Blvd./Crenshaw Blvd., during both peak hours
- Intersection #35, W. Artesia Blvd./Vermont Ave., during the PM peak hour

Note that Intersections 1, 20, 33, and 35 already have LOS worse than D under Existing Conditions. Intersections 5, 24, and 26 would be new deficiencies.

9.3 2025 Weekday No Project Freeway Level of Service

The existing LOS for the study freeway segments are shown in Exhibit 90. Seven CMP freeway monitoring stations are expected to have LOS worse than the target LOS of D or better, namely:

- CMP Station #1033, SR-91 East of Alameda St./Santa Fe Ave., Eastbound, during the PM peak hour
- CMP Station #1034, SR-91 East of Cherry Ave., Eastbound, during the PM peak hour and Westbound, during the AM peak hour
- CMP Station #1046, I-110 at Manchester Blvd., Eastbound and Westbound, during both peak hours
- CMP Station #1047, I-110 at Slauson Ave., Eastbound and Westbound, during both peak hours
- CMP Station #1066, I-405 at Santa Fe Ave., Northbound, during both peak hours and Southbound, during the PM peak hour
- CMP Station #1067, I-405 South of I-110 at the Carson Scales, Northbound, during both peak hours and Southbound, during both peak hours
- CMP Station #1068, I-405 North of Inglewood Ave. at Compton Blvd., Northbound, during both peak hours and Southbound, during the PM peak hour

These are the same seven locations that already have LOS worse than D under Existing Conditions.

Altogether 91 freeway segments are forecast to have an LOS worse than D, including those that are not CMP monitoring stations. These additional locations are:

- SR-91 eastbound, Jct. Rte. 110 to Avalon Blvd., during the PM peak hour
- SR-91 eastbound, Avalon Blvd. to Central Ave., during the PM peak hour
- SR-91 eastbound, Central Ave. to Wilmington Ave., during the PM peak hour
- SR-91 eastbound, Wilmington Ave. to Alameda St., during the PM peak hour
- SR-91 eastbound, Alameda St. to Alameda St./Santa Fe Ave., during the both peak hours
- SR-91 eastbound, Long Beach Blvd. to Jct. Rte. 710, during the PM peak hour
- SR-91 eastbound, Jct. Rte. 710 to Cherry Ave., during the PM peak hour
- SR-91 eastbound, Paramount Blvd. to Downey Ave., during the PM peak hour
- SR-91 eastbound, Downey Ave. to Jct. Rte. 19, during the PM peak hour
- SR-91 eastbound, Jct. Rte. 19 to Clark Ave., during the PM peak hour
- SR-91 eastbound, Clark Ave. to Bellflower Blvd., during the PM peak hour
- SR-91 eastbound, Bellflower Blvd. to Jct. Rte. 605, during the PM peak hour
- I-110 northbound, Sepulveda Blvd. to Carson St., during the AM peak hour
- I-110 northbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 northbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 northbound, Jct. Rte. 405 to Jct. Rte. 91, during the AM peak hour
- I-110 northbound, Century Blvd. to Manchester Ave., during the both peak hours
- I-110 northbound, Florence Ave. to Gage Ave., during the both peak hours
- I-110 northbound, Slauson Ave. to 51st St., during the both peak hours

- I-110 northbound, 51st St. to Vernon Ave., during the both peak hours
- I-110 northbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the both peak hours
- I-405 northbound, Lakewood Blvd. to Cherry Ave., during the both peak hours
- I-405 northbound, Cherry Ave. to Orange Ave., during the both peak hours
- I-405 northbound, Orange Ave. to Atlantic Ave., during the both peak hours
- I-405 northbound, Atlantic Ave. to Long Beach Blvd, during the both peak hours
- I-405 northbound, Long Beach Blvd to Jct. Rte. 710, during the both peak hours
- I-405 northbound, Alameda St. to Wilmington Ave., during the both peak hours
- I-405 northbound, Wilmington Ave. to Carson St., during the both peak hours
- I-405 northbound, Carson St. to Avalon Blvd., during the both peak hours
- I-405 northbound, Jct. Rte. 110 to Vermont Ave., during the both peak hours
- I-405 northbound, Vermont Ave. to Normandie Ave., during the AM peak hour
- I-405 northbound, Normandie Ave. to Western Ave., during the both peak hours
- I-405 northbound, Western Ave. to Crenshaw Blvd., during the both peak hours
- I-405 northbound, Crenshaw Blvd. to Artesia Blvd., during the both peak hours
- I-405 northbound, Artesia Blvd. to Hawthorne Blvd., during the AM peak hour
- I-405 northbound, Hawthorne Blvd. to Inglewood Ave., during the both peak hours
- I-710 northbound, Jct. Rte. 91 to Alondra Blvd., during the both peak hours
- I-710 northbound, Alondra Blvd. to Jct. Rte. 105, during the both peak hours
- SR-91 westbound, Jct. Rte. 110 to Avalon Blvd., during the both peak hours
- SR-91 westbound, Avalon Blvd. to Central Ave., during the AM peak hour
- SR-91 westbound, Central Ave. to Wilmington Ave., during the AM peak hour
- SR-91 westbound, Wilmington Ave. to Alameda St., during the AM peak hour
- SR-91 westbound, Alameda St. to Alameda St./Santa Fe Ave., during the AM peak hour
- SR-91 westbound, Long Beach Blvd. to Jct. Rte. 710, during the AM peak hour
- SR-91 westbound, Jct. Rte. 710 to Cherry Ave., during the both peak hours
- SR-91 westbound, Paramount Blvd. to Downey Ave., during the both peak hours
- SR-91 westbound, Downey Ave. to Jct. Rte. 19, during the AM peak hour
- SR-91 westbound, Jct. Rte. 19 to Clark Ave., during the both peak hours
- SR-91 westbound, Clark Ave. to Bellflower Blvd., during the AM peak hour
- SR-91 westbound, Bellflower Blvd. to Jct. Rte. 605, during the AM peak hour
- I-110 southbound, Sepulveda Blvd. to Carson St., during the PM peak hour
- I-110 southbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 southbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 southbound, Jct. Rte. 405 to Jct. Rte. 91, during the both peak hours

- I-110 southbound, Redondo Beach Blvd. to Rosecrans Ave., during the AM peak hour
- I-110 southbound, Rosecrans Ave. to El Segundo Blvd., during the both peak hours
- I-110 southbound, Century Blvd. to Manchester Ave., during the both peak hours
- I-110 southbound, Florence Ave. to Gage Ave., during the both peak hours
- I-110 southbound, Slauson Ave. to 51st St., during the both peak hours
- I-110 southbound, 51st St. to Vernon Ave., during the both peak hours
- I-110 southbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the both peak hours
- I-110 southbound, Martin Luther King Jr. Blvd. to Exposition Blvd., during the both peak hours
- I-405 southbound, Lakewood Blvd. to Cherry Ave., during the both peak hours
- I-405 southbound, Cherry Ave. to Orange Ave., during the both peak hours
- I-405 southbound, Orange Ave. to Atlantic Ave., during the both peak hours
- I-405 southbound, Atlantic Ave. to Long Beach Blvd, during the PM peak hour
- I-405 southbound, Long Beach Blvd to Jct. Rte. 710, during the both peak hours
- I-405 southbound, Alameda St. to Wilmington Ave., during the PM peak hour
- I-405 southbound, Wilmington Ave. to Carson St., during the both peak hours
- I-405 southbound, Carson St. to Avalon Blvd., during the both peak hours
- I-405 southbound, Jct. Rte. 110 to Vermont Ave., during the both peak hours
- I-405 southbound, Vermont Ave. to Normandie Ave., during the PM peak hour
- I-405 southbound, Normandie Ave. to Western Ave., during the both peak hours
- I-405 southbound, Western Ave. to Crenshaw Blvd., during the both peak hours
- I-405 southbound, Crenshaw Blvd. to Artesia Blvd., during the both peak hours
- I-405 southbound, Artesia Blvd. to Hawthorne Blvd., during the both peak hours
- I-405 southbound, Hawthorne Blvd. to Inglewood Ave., during the both peak hours
- I-710 southbound, Alondra Blvd. to Jct. Rte. 105, during the AM peak hour

Exhibit 90: 2025 Weekday No Project of Service (LOS) for Study Freeway Locations

10 2025 Plus Project Conditions

10.1 2025 Plus Project Alternative 1 Conditions

10.1.1 Forecasting 2025 Weekday Plus Project Alternative 1 Traffic

Traffic volumes for the 2025 Plus Project condition were developed by factoring up the existing weekday traffic counts using the growth factor from the LA-CMP and then adding in the traffic for existing, known, and reasonably foreseeable projects, part of the University Village portion of the Master Plan and the two percent increase in students. The resulting 2025 Plus Project traffic volumes are shown in Exhibit 92.

10.1.2 2025 Weekday Plus Project Alternative 1 Intersection Level of Service

Exhibit 91 shows in tabular format the 2025 Plus Project weekday level of service (LOS) based on the traffic volumes shown in Exhibit 92 (also see Appendix M). The LOS is also shown on maps in Exhibit 93 for the AM peak hour condition, and Exhibit 94 for the PM peak hour condition. Exhibit 95 shows the intersection impacts of the Project. The Project would have significant impacts at 10 study intersections, namely:

- Intersection #1, Victoria St./Drive D, during the AM peak hour
- Intersection #3, Victoria St./Birchknoll Dr., during the PM peak hour
- Intersection #5, Central Ave./Charles Willard St., during the PM peak hour
- Intersection #6, Central Ave./Project Driveway/Beachey Pl., during both peak hours
- Intersection #13, Avalon Blvd./Victoria St., during the PM peak hour
- Intersection #14, Central Ave./Artesia Blvd. WB, during the PM peak hour
- Intersection #15, Central Ave./Albertoni St./Artesia Blvd. EB, during both peak hours
- Intersection #20, I-110 SB Off-Ramp/190th St., during both peak hours
- Intersection #22, Figueroa St./190th St./Victoria St., during both peak hours
- Intersection #24, Main St./Victoria St., During the PM peak hour

Exhibit 95: Determination of Intersection Impact for the 2025 Weekday Plus Project Alternative 1

10.1.3 2025 Weekday Plus Project Alternative 1 Freeway Level of Service

The Project LOS for the study freeway segments are shown in Exhibit 96. Exhibit 97 shows that the Project would have 33 freeway impacts in 2025, namely:

- SR-91 eastbound, Avalon Blvd. to Central Ave., during the PM peak hour
- SR-91 eastbound, Central Ave. to Wilmington Ave., during the PM peak hour
- SR-91 eastbound, Wilmington Ave. to Alameda St., during the PM peak hour
- SR-91 eastbound, Alameda St. to Alameda St./Santa Fe Ave., during the PM peak hour
- SR-91 eastbound, Alameda St./Santa Fe Ave. to Long Beach Blvd., during the PM peak hour
- SR-91 eastbound, Long Beach Blvd. to Jct. Rte. 710, during the PM peak hour
- I-110 northbound, Sepulveda Blvd. to Carson St., during the AM peak hour
- I-110 northbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 northbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 northbound, Jct. Rte. 405 to Jct. Rte. 91, during the AM peak hour
- I-405 northbound, Carson St. to Avalon Blvd., during the both peak hours
- I-405 northbound, Avalon Blvd. to Jct. Rte. 110, during the PM peak hour
- I-405 northbound, Jct. Rte. 110 to Vermont Ave., during the PM peak hour
- I-405 northbound, Normandie Ave. to Western Ave., during the PM peak hour
- I-405 northbound, Western Ave. to Crenshaw Blvd., during the PM peak hour
- I-405 northbound, Crenshaw Blvd. to Artesia Blvd., during the PM peak hour
- SR-91 westbound, Avalon Blvd. to Central Ave., during the AM peak hour
- SR-91 westbound, Central Ave. to Wilmington Ave., during the AM peak hour
- SR-91 westbound, Wilmington Ave. to Alameda St., during the AM peak hour
- SR-91 westbound, Alameda St. to Alameda St./Santa Fe Ave., during the AM peak hour
- SR-91 westbound, Long Beach Blvd. to Jct. Rte. 710, during the AM peak hour
- I-110 southbound, Sepulveda Blvd. to Carson St., during the PM peak hour
- I-110 southbound, Carson St. to Torrance/Del Amo Blvd., during the PM peak hour
- I-110 southbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 southbound, Jct. Rte. 405 to Jct. Rte. 91, during the both peak hours
- I-110 southbound, Redondo Beach Blvd. to Rosecrans Ave., during the AM peak hour
- I-110 southbound, Rosecrans Ave. to El Segundo Blvd., during the AM peak hour
- I-110 southbound, Century Blvd. to Manchester Ave., during the AM peak hour
- I-110 southbound, Slauson Ave. to 51st St., during the AM peak hour
- I-405 southbound, Carson St. to Avalon Blvd., during the PM peak hour
- I-405 southbound, Avalon Blvd. to Jct. Rte. 110, during the AM peak hour
- I-405 southbound, Jct. Rte. 110 to Vermont Ave., during the both peak hours
- I-405 southbound, Western Ave. to Crenshaw Blvd., during the AM peak hour

Note: D/C is demand-to-capacity ratio.

Exhibit 97: Determination of Freeway Impact for 2025 Weekday Plus Project Alternative 1 (continued)

10.1.4 Determination of Pedestrian Impacts

The CSU system has defined a significant pedestrian impact as a situation where,

- *“A project fails to provide safe pedestrian connections between campus buildings and adjacent streets and transit facilities. Or*
- *A project significantly disrupts existing or planned pedestrian facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”*

Based on this standard, the Project would not impose such disruptions and so would not have any significant pedestrian impacts in 2025.

10.1.5 Determination of Bicycle Impacts

The CSU system has defined a significant bicycle impact as a situation where, *“A project significantly disrupts existing or planned bicycle facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”* Based on this standard, the Project would not impose such disruptions and so would not have any significant bicycle impacts in 2025.

10.1.6 Determination of Transit Impacts

CSU guideline state that a significant transit impact would occur if, *“A project significantly disrupts existing or planned transit facilities and services or significantly conflicts with applicable transit plans, guidelines, policies, or standards.”* Based on this standard, the Project would not impose such disruptions and so would not have any significant transit impacts in 2025. The Project would also not have any transit capacity impacts, as was shown earlier in Section 6.1.6.

10.2 2025 Plus Project Alternative 2 Conditions

10.2.1 Forecasting 2025 Weekday Plus Project Alternative 2 Traffic

Traffic volumes for the 2025 Plus Project condition were developed by factoring up the existing weekday traffic counts using the growth factor from the LA-CMP and then adding in the traffic for existing, known, and reasonably foreseeable projects, part of the University Village portion of the Master Plan and the two percent increase in students. The resulting 2025 Plus Project traffic volumes are shown in Exhibit 99.

10.2.2 2025 Weekday Plus Project Alternative 2 Intersection Level of Service

Exhibit 98 shows in tabular format the 2025 Plus Project weekday level of service (LOS) based on the traffic volumes shown in Exhibit 99 (also see Appendix N). The LOS is also shown on maps in Exhibit 100 for the AM peak hour condition, and Exhibit 101 for the PM peak hour condition. Exhibit 102 shows the intersection impacts of the Project. The Project would have significant impacts at 11 study intersections, namely:

- Intersection #1, Victoria St./Drive D, during the AM peak hour
- Intersection #3, Victoria St./Birchknoll Dr., during the PM peak hour
- Intersection #5, Central Ave./Charles Willard St., during the PM peak hour
- Intersection #6, Central Ave./Project Driveway/Beachey Pl., during both peak hours
- Intersection #13, Avalon Blvd./Victoria St., during the PM peak hour
- Intersection #14, Central Ave./Artesia Blvd. WB, during the PM peak hour
- Intersection #15, Central Ave./Albertoni St./Artesia Blvd. EB, during both peak hours
- Intersection #20, I-110 SB Off-Ramp/190th St., during both peak hours
- Intersection #22, Figueroa St./190th St./Victoria St., during the PM peak hour
- Intersection #24, Main St./Victoria St., During the PM peak hour
- Intersection #26, Avalon Blvd./Del Amo Blvd., During the PM peak hour

Exhibit 102: Determination of Intersection Impact for the 2025 Weekday Plus Project Alternative 2

10.2.3 2025 Weekday Plus Project Alternative 2 Freeway Level of Service

The Project LOS for the study freeway segments are shown in Exhibit 103. Exhibit 104 shows that the Project would have 27 freeway impacts in 2025, namely:

- SR-91 eastbound, Avalon Blvd. to Central Ave., during the PM peak hour
- SR-91 eastbound, Central Ave. to Wilmington Ave., during the PM peak hour
- SR-91 eastbound, Wilmington Ave. to Alameda St., during the PM peak hour
- SR-91 eastbound, Alameda St. to Alameda St./Santa Fe Ave., during the PM peak hour
- I-110 northbound, Sepulveda Blvd. to Carson St., during the AM peak hour
- I-110 northbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 northbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 northbound, Jct. Rte. 405 to Jct. Rte. 91, during the AM peak hour
- I-405 northbound, Carson St. to Avalon Blvd., during the AM peak hour
- I-405 northbound, Avalon Blvd. to Jct. Rte. 110, during the PM peak hour
- I-405 northbound, Jct. Rte. 110 to Vermont Ave., during the PM peak hour
- I-405 northbound, Normandie Ave. to Western Ave., during the PM peak hour
- I-405 northbound, Western Ave. to Crenshaw Blvd., during the PM peak hour
- I-405 northbound, Crenshaw Blvd. to Artesia Blvd., during the PM peak hour
- SR-91 westbound, Central Ave. to Wilmington Ave., during the AM peak hour
- SR-91 westbound, Wilmington Ave. to Alameda St., during the AM peak hour
- SR-91 westbound, Alameda St. to Alameda St./Santa Fe Ave., during the AM peak hour
- SR-91 westbound, Long Beach Blvd. to Jct. Rte. 710, during the AM peak hour
- I-110 southbound, Sepulveda Blvd. to Carson St., during the PM peak hour
- I-110 southbound, Carson St. to Torrance/Del Amo Blvd., during the PM peak hour
- I-110 southbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 southbound, Jct. Rte. 405 to Jct. Rte. 91, during the both peak hours
- I-110 southbound, Rosecrans Ave. to El Segundo Blvd., during the AM peak hour
- I-110 southbound, Century Blvd. to Manchester Ave., during the AM peak hour
- I-405 southbound, Carson St. to Avalon Blvd., during the PM peak hour
- I-405 southbound, Avalon Blvd. to Jct. Rte. 110, during the AM peak hour
- I-405 southbound, Jct. Rte. 110 to Vermont Ave., during the both peak hours

10.2.4 Determination of Pedestrian Impacts

The CSU system has defined a significant pedestrian impact as a situation where,

- *“A project fails to provide safe pedestrian connections between campus buildings and adjacent streets and transit facilities. Or*
- *A project significantly disrupts existing or planned pedestrian facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”*

Based on this standard, the Project would not impose such disruptions and so would not have any significant pedestrian impacts in 2025.

10.2.5 Determination of Bicycle Impacts

The CSU system has defined a significant bicycle impact as a situation where, “*A project significantly disrupts existing or planned bicycle facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.*” Based on this standard, the Project would not impose such disruptions and so would not have any significant bicycle impacts in 2025.

10.2.6 Determination of Transit Impacts

CSU guideline state that a significant transit impact would occur if, “*A project significantly disrupts existing or planned transit facilities and services or significantly conflicts with applicable transit plans, guidelines, policies, or standards.*” Based on this standard, the Project would not impose such disruptions and so would not have any significant transit impacts in 2025. The Project would also not have any transit capacity impacts, as was shown earlier in Section 6.1.6.

Exhibit 104: Determination of Freeway Impact for 2025 Weekday Plus Project Alternative 2 (continued)

11 2035 No Project Conditions

11.1 2035 Weekday No Project Conditions

11.1.1 Forecasting 2035 Weekday No Project Traffic

Traffic volumes for the 2035 No Project condition were developed by factoring up the existing weekday traffic counts using the growth factor from the LA-CMP and then adding in the traffic for existing, known, and reasonably foreseeable projects. The resulting 2035 No Project traffic volumes are shown in Exhibit 106.

11.1.2 2035 Weekday No Project Intersection Level of Service

Exhibit 105 shows in tabular format the 2035 No Project weekday level of service (LOS) based on the traffic volumes shown in Exhibit 106 (also see Appendix O). The LOS is also shown on maps in Exhibit 107 for the AM peak hour condition, and Exhibit 108 and for the PM peak hour condition. Seven intersections would not meet the target LOS of D or better under 2035 No Project conditions, namely:

- Intersection #1, Victoria Ave./Drive D, during the PM peak hours
- Intersection #5, Central Ave./Charles Willard St., during both peak hours
- Intersection #20, I-110 SB Off-Ramp/190th St., during both peak hours
- Intersection #24, Main St./Victoria St., during the PM peak hour
- Intersection #26, Avalon Blvd./Del Amo Blvd., during the PM peak hour
- Intersection #33, W. Artesia Blvd./Crenshaw Blvd., during both peak hours
- Intersection #35, W. Artesia Blvd./Vermont Ave., during the PM peak hour

Note that Intersections 1, 20, 33, and 35 already have LOS worse than D under Existing Conditions. Additional deficiencies would develop by 2025 at Intersections 5, 24, and 26 caused by the growth in background (i.e. non-Project) traffic (see Section 9.2) and would worsen by 2035.

11.1.3 2035 Weekday No Project Freeway Level of Service

The forecast 2035 No Project LOS for the study freeway segments are shown in Exhibit 109. Seven CMP freeway monitoring stations are forecast to have an LOS worse than D. These are the same seven locations with poor LOS under Existing Conditions, namely:

- CMP Station #1033, SR-91 East of Alameda St./Santa Fe Ave., Eastbound, during the PM peak hour
- CMP Station #1034, SR-91 East of Cherry Ave., Eastbound, during the PM peak hour and Westbound, during the AM peak hour
- CMP Station #1046, I-110 at Manchester Blvd., Northbound , during both peak hours and Southbound , during both peak hours
- CMP Station #1047, I-110 at Slauson Ave., Northbound and Southbound during both peak hours
- CMP Station #1066, I-405 at Santa Fe Ave., Northbound, during both peak hours and Southbound, during the PM peak hour
- CMP Station #1067, I-405 South of I-110 at the Carson Scales, Northbound, during both peak hours and Southbound, during both peak hours
- CMP Station #1068, I-405 North of Inglewood Ave. at Compton Blvd., Northbound, during both peak hours and Southbound, during the PM peak hour

Altogether 112 freeway segments are forecast to have an LOS worse than D, including those that are not CMP monitoring stations. These additional locations are:

- SR-91 eastbound, Jct. Rte. 110 to Avalon Blvd., during the PM peak hour
- SR-91 eastbound, Avalon Blvd. to Central Ave., during the PM peak hour
- SR-91 eastbound, Central Ave. to Wilmington Ave., during the PM peak hour
- SR-91 eastbound, Wilmington Ave. to Alameda St., during the PM peak hour
- SR-91 eastbound, Alameda St. to Alameda St./Santa Fe Ave., during the both peak hours
- SR-91 eastbound, Alameda St./Santa Fe Ave. to Long Beach Blvd., during the PM peak hour
- SR-91 eastbound, Long Beach Blvd. to Jct. Rte. 710, during the PM peak hour
- SR-91 eastbound, Jct. Rte. 710 to Cherry Ave., during the PM peak hour
- SR-91 eastbound, Cherry Ave. to Paramount Blvd., during the PM peak hour
- SR-91 eastbound, Paramount Blvd. to Downey Ave., during the PM peak hour
- SR-91 eastbound, Downey Ave. to Jct. Rte. 19, during the PM peak hour
- SR-91 eastbound, Jct. Rte. 19 to Clark Ave., during the PM peak hour
- SR-91 eastbound, Clark Ave. to Bellflower Blvd., during the PM peak hour
- SR-91 eastbound, Bellflower Blvd. to Jct. Rte. 605, during the PM peak hour
- I-110 northbound, Sepulveda Blvd. to Carson St., during the AM peak hour
- I-110 northbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 northbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 northbound, Jct. Rte. 405 to Jct. Rte. 91, during the AM peak hour
- I-110 northbound, Century Blvd. to Manchester Ave., during the both peak hours

- I-110 northbound, Manchester Ave. to Florence Ave., during the both peak hours
- I-110 northbound, Florence Ave. to Gage Ave., during the both peak hours
- I-110 northbound, Gage Ave. to Slauson Ave., during the both peak hours
- I-110 northbound, Slauson Ave. to 51st St., during the both peak hours
- I-110 northbound, 51st St. to Vernon Ave., during the both peak hours
- I-110 northbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the both peak hours
- I-405 northbound, Lakewood Blvd. to Cherry Ave., during the both peak hours
- I-405 northbound, Cherry Ave. to Orange Ave., during the both peak hours
- I-405 northbound, Orange Ave. to Atlantic Ave., during the both peak hours
- I-405 northbound, Atlantic Ave. to Long Beach Blvd, during the both peak hours
- I-405 northbound, Long Beach Blvd to Jct. Rte. 710, during the both peak hours
- I-405 northbound, Jct. Rte. 710 to Alameda St., during the both peak hours
- I-405 northbound, Alameda St. to Wilmington Ave., during the both peak hours
- I-405 northbound, Wilmington Ave. to Carson St., during the both peak hours
- I-405 northbound, Carson St. to Avalon Blvd., during the both peak hours
- I-405 northbound, Avalon Blvd. to Jct. Rte. 110, during the both peak hours
- I-405 northbound, Jct. Rte. 110 to Vermont Ave., during the both peak hours
- I-405 northbound, Vermont Ave. to Normandie Ave., during the AM peak hour
- I-405 northbound, Normandie Ave. to Western Ave., during the both peak hours
- I-405 northbound, Western Ave. to Crenshaw Blvd., during the both peak hours
- I-405 northbound, Crenshaw Blvd. to Artesia Blvd., during the both peak hours
- I-405 northbound, Artesia Blvd. to Hawthorne Blvd., during the AM peak hour
- I-405 northbound, Hawthorne Blvd. to Inglewood Ave., during the both peak hours
- I-405 northbound, Inglewood Ave. to Rosecrans Ave., during the both peak hours
- I-710 northbound, Jct. Rte. 91 to Alondra Blvd., during the both peak hours
- I-710 northbound, Alondra Blvd. to Jct. Rte. 105, during the both peak hours
- SR-91 westbound, Jct. Rte. 110 to Avalon Blvd., during the both peak hours
- SR-91 westbound, Avalon Blvd. to Central Ave., during the AM peak hour
- SR-91 westbound, Central Ave. to Wilmington Ave., during the AM peak hour
- SR-91 westbound, Wilmington Ave. to Alameda St., during the AM peak hour
- SR-91 westbound, Alameda St. to Alameda St./Santa Fe Ave., during the AM peak hour
- SR-91 westbound, Long Beach Blvd. to Jct. Rte. 710, during the AM peak hour
- SR-91 westbound, Jct. Rte. 710 to Cherry Ave., during the both peak hours
- SR-91 westbound, Cherry Ave. to Paramount Blvd., during the AM peak hour
- SR-91 westbound, Paramount Blvd. to Downey Ave., during the both peak hours

- SR-91 westbound, Downey Ave. to Jct. Rte. 19, during the AM peak hour
- SR-91 westbound, Jct. Rte. 19 to Clark Ave., during the both peak hours
- SR-91 westbound, Clark Ave. to Bellflower Blvd., during the AM peak hour
- SR-91 westbound, Bellflower Blvd. to Jct. Rte. 605, during the AM peak hour
- I-110 southbound, Sepulveda Blvd. to Carson St., during the PM peak hour
- I-110 southbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 southbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 southbound, Jct. Rte. 405 to Jct. Rte. 91, during the both peak hours
- I-110 southbound, Redondo Beach Blvd. to Rosecrans Ave., during the AM peak hour
- I-110 southbound, Rosecrans Ave. to El Segundo Blvd., during the both peak hours
- I-110 southbound, Century Blvd. to Manchester Ave., during the both peak hours
- I-110 southbound, Manchester Ave. to Florence Ave., during the both peak hours
- I-110 southbound, Florence Ave. to Gage Ave., during the both peak hours
- I-110 southbound, Gage Ave. to Slauson Ave., during the both peak hours
- I-110 southbound, Slauson Ave. to 51st St., during the both peak hours
- I-110 southbound, 51st St. to Vernon Ave., during the both peak hours
- I-110 southbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the both peak hours
- I-110 southbound, Martin Luther King Jr. Blvd. to Exposition Blvd., during the both peak hours
- I-405 southbound, Lakewood Blvd. to Cherry Ave., during the both peak hours
- I-405 southbound, Cherry Ave. to Orange Ave., during the both peak hours
- I-405 southbound, Orange Ave. to Atlantic Ave., during the both peak hours
- I-405 southbound, Atlantic Ave. to Long Beach Blvd, during the PM peak hour
- I-405 southbound, Long Beach Blvd to Jct. Rte. 710, during the both peak hours

Note: D/C is demand-to-capacity ratio.

Exhibit 109: 2035 Weekday No Projects Level of Service (LOS) for Study Freeway Locations

11.2 2035 Sunday (27,000 Seats) Conditions

11.2.1 Forecasting 2035 Sunday (27,000 Seats) Traffic

Traffic volumes for the 2035 No Project condition were developed by factoring up the existing Sunday traffic counts using the growth factor from the LA-CMP and then adding in the traffic for a 27,000-seat event. The resulting 2035 No Project traffic volumes are shown in Exhibit 111 for pre-event hour and Exhibit 112 for the post event hour.

11.2.2 2035 Sunday (27,000 Seats) Level of Service

Exhibit 110 shows in tabular format the 2035 Sunday No Project level of service (LOS) based on the traffic volumes shown in Exhibit 111 and Exhibit 112 (also see Appendix P). The LOS is also shown on maps in Exhibit 113, for the pre-game peak hour condition, and Exhibit 114 for the post-game peak hour condition. The LOS is forecast to be D or better at all study intersections.

12 2035 Plus Project Conditions

12.1 2035 Weekday Plus Project Alternative 1 Conditions

12.1.1 Forecasting 2035 Weekday plus Project Alternative 1 Traffic

Traffic volumes for the 2035 Plus Project condition were developed by factoring up the existing weekday traffic counts using the growth factor from the LA-CMP and then adding in the traffic for existing, known, and reasonably foreseeable projects, and full build-out of the Master Plan. The resulting 2035 Plus Project traffic volumes are shown in Exhibit 116.

12.1.2 2035 Weekday Plus Project Alternative 1 Level of Service

Exhibit 115 shows in tabular format the 2035 Plus Project weekday level of service (LOS) based on the traffic volumes shown in Exhibit 116 (also see Appendix Q). The LOS is also shown on maps in Exhibit 117 for the AM peak hour condition, and Exhibit 118 for the PM peak hour condition. Exhibit 119 shows the intersection impacts of the Project. The Project would have significant impacts at 17 intersections, namely:

- Intersection #1, Victoria St./Drive D, during the AM peak hour
- Intersection #3, Victoria St./Birchknoll Dr., during the PM peak hour
- Intersection #5, Central Ave./Charles Willard St., during the PM peak hour
- Intersection #6, Central Ave./Project Driveway/Beachey Pl., during both peak hours
- Intersection #9, University Dr./Toro Center Dr., during both peak hours
- Intersection #10, Albertoni St./SR-91 EB Ramps, during the PM peak hour
- Intersection #12, Avalon Blvd./Albertoni St., during the PM peak hour
- Intersection #13, Avalon Blvd./Victoria St., during both peak hours
- Intersection #14, Central Ave./Artesia Blvd. WB, during both peak hours
- Intersection #15, Central Ave./Albertoni St./Artesia Blvd. EB, during both peak hours
- Intersection #16, Central Ave./Victoria St., during both peak hours
- Intersection #20, I-110 SB Off-Ramp/190th St., during both peak hours
- Intersection #22, Figueroa St./190th St./Victoria St., during both peak hours
- Intersection #23, Broadway/Victoria St., during the PM peak hour
- Intersection #24, Main St./Victoria St., during the PM peak hour
- Intersection #26, Avalon Blvd./Del Amo Blvd., during the both peak hours
- Intersection #29, Central Ave./University Dr., during both peak hours.

Exhibit 119: Determination of Intersection Impacts for the 2035 Weekday Plus Project Alternative 1

12.1.3 2035 Weekday Plus Project Alternative 1 Freeway Level of Service

The forecast LOS for the study freeway segments for the 2035 Plus Project condition are shown in Exhibit 120. Exhibit 121 shows the freeway impacts of the Project. The Project would have significant impacts on 13 CMP freeway monitoring stations, namely:

- CMP Station #1033, SR-91 East of Alameda St./Santa Fe Ave., Eastbound, during the PM peak hour
- CMP Station #1033, SR-91 East of Alameda St./Santa Fe Ave., Westbound, during the AM peak hour
- CMP Station #1034, SR-91 East of Cherry Ave., Eastbound, during the PM peak hour
- CMP Station #1034, SR-91 East of Cherry Ave., Southbound, during the AM peak hour
- CMP Station #1046, I-110 at Manchester Blvd., Northbound, during the PM peak hour
- CMP Station #1046, I-110 at Manchester Blvd., Southbound, during both peak hours
- CMP Station #1047, I-110 at Slauson Ave., Northbound, during the PM peak hour
- CMP Station #1047, I-110 at Slauson Ave., Southbound, during both peak hours
- CMP Station #1066, I-405 at Santa Fe Ave., Northbound, during the both peak hours
- CMP Station #1066, I-405 at Santa Fe Ave., Southbound, during the PM peak hour
- CMP Station #1067, I-405 South of I-110 at the Carson Scales, Northbound, during both peak hours
- CMP Station #1067, I-405 South of I-110 at the Carson Scales, Southbound, during the PM peak hour
- CMT Station #1068, I-405 North of Inglewood Ave., Northbound during the PM peak hour

Altogether 84 freeway segments would have significant impacts, including those that are not CMP monitoring stations. These additional locations are:

- SR-91 eastbound, Jct. Rte. 110 to Avalon Blvd., during the PM peak hour
- SR-91 eastbound, Avalon Blvd. to Central Ave., during the PM peak hour
- SR-91 eastbound, Central Ave. to Wilmington Ave., during the PM peak hour
- SR-91 eastbound, Wilmington Ave. to Alameda St., during the PM peak hour
- SR-91 eastbound, Alameda St. to Alameda St./Santa Fe Ave., during the both peak hours
- SR-91 eastbound, Long Beach Blvd. to Jct. Rte. 710, during the PM peak hour
- SR-91 eastbound, Jct. Rte. 710 to Cherry Ave., during the PM peak hour
- SR-91 eastbound, Paramount Blvd. to Downey Ave., during the PM peak hour
- SR-91 eastbound, Downey Ave. to Jct. Rte. 19, during the PM peak hour
- SR-91 eastbound, Jct. Rte. 19 to Clark Ave., during the PM peak hour
- SR-91 eastbound, Clark Ave. to Bellflower Blvd., during the PM peak hour
- I-110 northbound, Sepulveda Blvd. to Carson St., during the AM peak hour
- I-110 northbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 northbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours

- I-110 northbound, Jct. Rte. 405 to Jct. Rte. 91, during the AM peak hour
- I-110 northbound, Rosecrans Ave. to El Segundo Blvd., during the PM peak hour
- I-110 northbound, El Segundo Blvd. to Jct. Rte. 105, during the PM peak hour
- I-110 northbound, Century Blvd. to Manchester Ave., during the PM peak hour
- I-110 northbound, Florence Ave. to Gage Ave., during the PM peak hour
- I-110 northbound, Slauson Ave. to 51st St., during the PM peak hour
- I-110 northbound, 51st St. to Vernon Ave., during the PM peak hour
- I-110 northbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the PM peak hour
- I-405 northbound, Cherry Ave. to Orange Ave., during the AM peak hour
- I-405 northbound, Orange Ave. to Atlantic Ave., during the both peak hours
- I-405 northbound, Atlantic Ave. to Long Beach Blvd, during the AM peak hour
- I-405 northbound, Alameda St. to Wilmington Ave., during the both peak hours
- I-405 northbound, Wilmington Ave. to Carson St., during the both peak hours
- I-405 northbound, Carson St. to Avalon Blvd., during the both peak hours
- I-405 northbound, Jct. Rte. 110 to Vermont Ave., during the both peak hours
- I-405 northbound, Vermont Ave. to Normandie Ave., during the AM peak hour
- I-405 northbound, Normandie Ave. to Western Ave., during the PM peak hour
- I-405 northbound, Western Ave. to Crenshaw Blvd., during the both peak hours
- I-405 northbound, Crenshaw Blvd. to Artesia Blvd., during the both peak hours
- I-405 northbound, Hawthorne Blvd. to Inglewood Ave., during the PM peak hour
- SR-91 westbound, Jct. Rte. 110 to Avalon Blvd., during the both peak hours
- SR-91 westbound, Avalon Blvd. to Central Ave., during the AM peak hour
- SR-91 westbound, Central Ave. to Wilmington Ave., during the AM peak hour
- SR-91 westbound, Wilmington Ave. to Alameda St., during the AM peak hour
- SR-91 westbound, Alameda St. to Alameda St./Santa Fe Ave., during the AM peak hour
- SR-91 westbound, Long Beach Blvd. to Jct. Rte. 710, during the AM peak hour
- SR-91 westbound, Jct. Rte. 710 to Cherry Ave., during the both peak hours
- SR-91 westbound, Paramount Blvd. to Downey Ave., during the both peak hours
- SR-91 westbound, Downey Ave. to Jct. Rte. 19, during the AM peak hour
- SR-91 westbound, Jct. Rte. 19 to Clark Ave., during the AM peak hour
- SR-91 westbound, Clark Ave. to Bellflower Blvd., during the AM peak hour
- SR-91 westbound, Bellflower Blvd. to Jct. Rte. 605, during the AM peak hour
- I-110 southbound, Sepulveda Blvd. to Carson St., during the both peak hours
- I-110 southbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 southbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours

- I-110 southbound, Jct. Rte. 405 to Jct. Rte. 91, during the both peak hours
- I-110 southbound, Redondo Beach Blvd. to Rosecrans Ave., during the AM peak hour
- I-110 southbound, Rosecrans Ave. to El Segundo Blvd., during the both peak hours
- I-110 southbound, Century Blvd. to Manchester Ave., during the both peak hours
- I-110 southbound, Florence Ave. to Gage Ave., during the both peak hours
- I-110 southbound, Slauson Ave. to 51st St., during the both peak hours
- I-110 southbound, 51st St. to Vernon Ave., during the AM peak hour
- I-110 southbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the AM peak hour
- I-110 southbound, Martin Luther King Jr. Blvd. to Exposition Blvd., during the both peak hours
- I-405 southbound, Orange Ave. to Atlantic Ave., during the PM peak hour
- I-405 southbound, Long Beach Blvd to Jct. Rte. 710, during the PM peak hour
- I-405 southbound, Alameda St. to Wilmington Ave., during the PM peak hour
- I-405 southbound, Wilmington Ave. to Carson St., during the PM peak hour
- I-405 southbound, Carson St. to Avalon Blvd., during the both peak hours
- I-405 southbound, Jct. Rte. 110 to Vermont Ave., during the both peak hours
- I-405 southbound, Vermont Ave. to Normandie Ave., during the PM peak hour
- I-405 southbound, Normandie Ave. to Western Ave., during the both peak hours
- I-405 southbound, Western Ave. to Crenshaw Blvd., during the both peak hours
- I-405 southbound, Crenshaw Blvd. to Artesia Blvd., during the both peak hours
- I-405 southbound, Artesia Blvd. to Hawthorne Blvd., during the AM peak hour
- I-405 southbound, Hawthorne Blvd. to Inglewood Ave., during the AM peak hour
- I-710 southbound, Alondra Blvd. to Jct. Rte. 105, during the AM peak hour

Note: D/C is demand-to-capacity ratio.

Exhibit 120: 2035 Weekday Plus Project Alternative 1 Level of Service (LOS) for Study Freeway Locations (continued)

12.1.4 Determination of Pedestrian Impacts

The CSU system has defined a significant pedestrian impact as a situation where,

- “A project fails to provide safe pedestrian connections between campus buildings and adjacent streets and transit facilities. Or
- A project significantly disrupts existing or planned pedestrian facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”

Based on this standard, the Project would not impose such disruptions and so would not have any significant pedestrian impacts in 2035.

12.1.5 Determination of Bicycle Impacts

The CSU system has defined a significant bicycle impact as a situation where, “A project significantly disrupts existing or planned bicycle facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.” Based on this standard, the Project would not impose such disruptions and so would not have any significant bicycle impacts in 2035.

12.1.6 Determination of Transit Impacts

CSU guideline state that a significant transit impact would occur if, “A project significantly disrupts existing or planned transit facilities and services or significantly conflicts with applicable transit plans, guidelines, policies, or standards.” Based on this standard, the Project would not impose such disruptions and so would not have any significant transit impacts in 2035. The Project would also not have any transit capacity impacts, as was shown earlier in Section 6.1.6.

12.2 2035 Weekday Plus Project Alternative 2 Conditions

12.2.1 Forecasting 2035 Weekday plus Project Alternative 2 Traffic

Traffic volumes for the 2035 Plus Project condition were developed by factoring up the existing weekday traffic counts using the growth factor from the LA-CMP and then adding in the traffic for existing, known, and reasonably foreseeable projects, and full build-out of the Master Plan. The resulting 2035 Plus Project traffic volumes are shown in Exhibit 123.

12.2.2 2035 Weekday Plus Project Alternative 2 Level of Service

Exhibit 122 shows in tabular format the 2035 Plus Project weekday level of service (LOS) based on the traffic volumes shown in Exhibit 123 (also see Appendix R). The LOS is also shown on maps in Exhibit 124 for the AM peak hour condition, and Exhibit 125 for the PM peak hour condition. Exhibit 126 shows the intersection impacts of the Project. The Project would have significant impacts at 17 intersections, namely:

- Intersection #1, Victoria St./Drive D, during the AM peak hour
- Intersection #3, Victoria St./Birchknoll Dr., during the PM peak hour
- Intersection #5, Central Ave./Charles Willard St., during the PM peak hour
- Intersection #6, Central Ave./Project Driveway/Beachey Pl., during both peak hours
- Intersection #9, University Dr./Toro Center Dr., during both peak hours

- Intersection #10, Albertoni St./SR-91 EB Ramps, during the PM peak hour
- Intersection #12, Avalon Blvd./Albertoni St., during the PM peak hour
- Intersection #13, Avalon Blvd./Victoria St., during both peak hours
- Intersection #14, Central Ave./Artesia Blvd. WB, during both peak hours
- Intersection #15, Central Ave./Albertoni St./Artesia Blvd. EB, during both peak hours
- Intersection #16, Central Ave./Victoria St., during both peak hours
- Intersection #20, I-110 SB Off-Ramp/190th St., during both peak hours
- Intersection #22, Figueroa St./190th St./Victoria St., during both peak hours
- Intersection #23, Broadway/Victoria St., during the PM peak hour
- Intersection #24, Main St./Victoria St., during the PM peak hour
- Intersection #26, Avalon Blvd./Del Amo Blvd., during the both peak hours
- Intersection #29, Central Ave./University Dr., during both peak hours.

Exhibit 126: Determination of Intersection Impacts for the 2035 Weekday Plus Project Alternative 2

12.2.3 2035 Weekday Plus Project Alternative 2 Freeway Level of Service

The forecast LOS for the study freeway segments for the 2035 Plus Project condition are shown in Exhibit 127. Exhibit 128 shows the freeway impacts of the Project. The Project would have significant impacts on 13 CMP freeway monitoring stations, namely:

- CMP Station #1033, SR-91 East of Alameda St./Santa Fe Ave., Eastbound, during the PM peak hour
- CMP Station #1033, SR-91 East of Alameda St./Santa Fe Ave., Westbound, during the AM peak hour
- CMP Station #1034, SR-91 East of Cherry Ave., Eastbound, during the PM peak hour
- CMP Station #1034, SR-91 East of Cherry Ave., Southbound, during the AM peak hour
- CMP Station #1046, I-110 at Manchester Blvd., Northbound, during the PM peak hour
- CMP Station #1046, I-110 at Manchester Blvd., Southbound, during the AM peak hour
- CMP Station #1047, I-110 at Slauson Ave., Northbound, during the PM peak hour
- CMP Station #1047, I-110 at Slauson Ave., Southbound, during both peak hours
- CMP Station #1066, I-405 at Santa Fe Ave., Northbound, during the both peak hours
- CMP Station #1066, I-405 at Santa Fe Ave., Southbound, during the PM peak hour
- CMP Station #1067, I-405 South of I-110 at the Carson Scales, Northbound, during both peak hours
- CMP Station #1067, I-405 South of I-110 at the Carson Scales, Southbound, during the PM peak hour
- CMT Station #1068, I-405 North of Inglewood Ave., Northbound during the PM peak hour

Altogether 81 freeway segments would have significant impacts, including those that are not CMP monitoring stations. These additional locations are:

- SR-91 eastbound, Jct. Rte. 110 to Avalon Blvd., during the PM peak hour
- SR-91 eastbound, Avalon Blvd. to Central Ave., during the PM peak hour
- SR-91 eastbound, Central Ave. to Wilmington Ave., during the PM peak hour
- SR-91 eastbound, Wilmington Ave. to Alameda St., during the PM peak hour
- SR-91 eastbound, Alameda St. to Alameda St./Santa Fe Ave., during the both peak hours
- SR-91 eastbound, Long Beach Blvd. to Jct. Rte. 710, during the PM peak hour
- SR-91 eastbound, Jct. Rte. 710 to Cherry Ave., during the PM peak hour
- SR-91 eastbound, Paramount Blvd. to Downey Ave., during the PM peak hour
- SR-91 eastbound, Downey Ave. to Jct. Rte. 19, during the PM peak hour
- SR-91 eastbound, Jct. Rte. 19 to Clark Ave., during the PM peak hour
- I-110 northbound, Sepulveda Blvd. to Carson St., during the AM peak hour
- I-110 northbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 northbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 northbound, Jct. Rte. 405 to Jct. Rte. 91, during the AM peak hour

- I-110 northbound, Rosecrans Ave. to El Segundo Blvd., during the PM peak hour
- I-110 northbound, El Segundo Blvd. to Jct. Rte. 105, during the PM peak hour
- I-110 northbound, Century Blvd. to Manchester Ave., during the PM peak hour
- I-110 northbound, Slauson Ave. to 51st St., during the PM peak hour
- I-110 northbound, 51st St. to Vernon Ave., during the PM peak hour
- I-110 northbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the PM peak hour
- I-405 northbound, Orange Ave. to Atlantic Ave., during the both peak hours
- I-405 northbound, Atlantic Ave. to Long Beach Blvd, during the AM peak hour
- I-405 northbound, Alameda St. to Wilmington Ave., during the both peak hours
- I-405 northbound, Wilmington Ave. to Carson St., during the both peak hours
- I-405 northbound, Carson St. to Avalon Blvd., during the both peak hours
- I-405 northbound, Jct. Rte. 110 to Vermont Ave., during the both peak hours
- I-405 northbound, Vermont Ave. to Normandie Ave., during the AM peak hour
- I-405 northbound, Normandie Ave. to Western Ave., during the PM peak hour
- I-405 northbound, Western Ave. to Crenshaw Blvd., during the both peak hours
- I-405 northbound, Crenshaw Blvd. to Artesia Blvd., during the both peak hours
- I-405 northbound, Hawthorne Blvd. to Inglewood Ave., during the PM peak hour
- SR-91 westbound, Jct. Rte. 110 to Avalon Blvd., during the both peak hours
- SR-91 westbound, Avalon Blvd. to Central Ave., during the AM peak hour
- SR-91 westbound, Central Ave. to Wilmington Ave., during the AM peak hour
- SR-91 westbound, Wilmington Ave. to Alameda St., during the AM peak hour
- SR-91 westbound, Alameda St. to Alameda St./Santa Fe Ave., during the AM peak hour
- SR-91 westbound, Long Beach Blvd. to Jct. Rte. 710, during the AM peak hour
- SR-91 westbound, Jct. Rte. 710 to Cherry Ave., during the both peak hours
- SR-91 westbound, Paramount Blvd. to Downey Ave., during the both peak hours
- SR-91 westbound, Downey Ave. to Jct. Rte. 19, during the AM peak hour
- SR-91 westbound, Jct. Rte. 19 to Clark Ave., during the AM peak hour
- SR-91 westbound, Clark Ave. to Bellflower Blvd., during the AM peak hour
- SR-91 westbound, Bellflower Blvd. to Jct. Rte. 605, during the AM peak hour
- I-110 southbound, Sepulveda Blvd. to Carson St., during the both peak hours
- I-110 southbound, Carson St. to Torrance/Del Amo Blvd., during the both peak hours
- I-110 southbound, Torrance/Del Amo Blvd. to Jct. Rte. 405, during the both peak hours
- I-110 southbound, Jct. Rte. 405 to Jct. Rte. 91, during the both peak hours
- I-110 southbound, Redondo Beach Blvd. to Rosecrans Ave., during the AM peak hour
- I-110 southbound, Rosecrans Ave. to El Segundo Blvd., during the both peak hours

- I-110 southbound, Century Blvd. to Manchester Ave., during the both peak hours
- I-110 southbound, Florence Ave. to Gage Ave., during the both peak hours
- I-110 southbound, Slauson Ave. to 51st St., during the both peak hours
- I-110 southbound, 51st St. to Vernon Ave., during the AM peak hour
- I-110 southbound, Vernon Ave. to Martin Luther King Jr. Blvd., during the AM peak hour
- I-110 southbound, Martin Luther King Jr. Blvd. to Exposition Blvd., during the both peak hours
- I-405 southbound, Orange Ave. to Atlantic Ave., during the PM peak hour
- I-405 southbound, Long Beach Blvd to Jct. Rte. 710, during the PM peak hour
- I-405 southbound, Alameda St. to Wilmington Ave., during the PM peak hour
- I-405 southbound, Wilmington Ave. to Carson St., during the PM peak hour
- I-405 southbound, Carson St. to Avalon Blvd., during the both peak hours
- I-405 southbound, Jct. Rte. 110 to Vermont Ave., during the both peak hours
- I-405 southbound, Vermont Ave. to Normandie Ave., during the PM peak hour
- I-405 southbound, Normandie Ave. to Western Ave., during the both peak hours
- I-405 southbound, Western Ave. to Crenshaw Blvd., during the both peak hours
- I-405 southbound, Crenshaw Blvd. to Artesia Blvd., during the both peak hours
- I-405 southbound, Artesia Blvd. to Hawthorne Blvd., during the AM peak hour
- I-405 southbound, Hawthorne Blvd. to Inglewood Ave., during the AM peak hour
- I-710 southbound, Alondra Blvd. to Jct. Rte. 105, during the AM peak hour

Exhibit 128: Determination of Intersection Impact for 2035 Weekday Plus Project Alternative 2 (Continued)

12.2.4 Determination of Pedestrian Impacts

The CSU system has defined a significant pedestrian impact as a situation where,

- *“A project fails to provide safe pedestrian connections between campus buildings and adjacent streets and transit facilities. Or*
- *A project significantly disrupts existing or planned pedestrian facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”*

Based on this standard, the Project would not impose such disruptions and so would not have any significant pedestrian impacts in 2035.

12.2.5 Determination of Bicycle Impacts

The CSU system has defined a significant bicycle impact as a situation where, *“A project significantly disrupts existing or planned bicycle facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”* Based on this standard, the Project would not impose such disruptions and so would not have any significant bicycle impacts in 2035.

12.2.6 Determination of Transit Impacts

CSU guideline state that a significant transit impact would occur if, *“A project significantly disrupts existing or planned transit facilities and services or significantly conflicts with applicable transit plans, guidelines, policies, or standards.”* Based on this standard, the Project would not impose such disruptions and so would not have any significant transit impacts in 2035. The Project would also not have any transit capacity impacts, as was shown earlier in Section 6.1.6.

12.3 2035 Sunday Plus Project with 30,000-Seats Conditions

12.3.1 Forecasting 2035 Sunday Plus Project with 30,000-Seats Traffic

Traffic volumes for the 2035 Plus Project condition were developed by factoring up the existing Sunday traffic counts using the growth factor from the LA-CMP and then adding in the traffic for a 30,000-seat event and the traffic generated by the master plan on Sunday. The resulting 2035 Plus Project traffic volumes are shown in Exhibit 130 for the pre-game peak hour and Exhibit 131 for the post-game peak hour.

12.3.2 2035 Sunday Plus Project with 30,000-Seats Level of Service

Exhibit 129 shows in tabular format the 2019 Plus Project Sunday level of service (LOS) based on the traffic volumes shown in Exhibit 130 and Exhibit 131 (also see Appendix S). The LOS is also shown on maps in Exhibit 132, for the pre-game peak hour condition, and Exhibit 133 for the post-game peak hour condition. Exhibit 134 shows the intersection impacts of the Project. The Project would have significant impacts at 5 study intersections, namely:

- Intersection #3, Victoria St./Tamcliff Ave., during post-game peak hour
- Intersection #9, University Dr./Toro Center Dr., during both peak hours
- Intersection #25, Avalon Blvd./University Dr., during both peak hours
- Intersection #26, Avalon Blvd./Del Amo Blvd., during post-game peak hour
- Intersection #41, Victoria St./Rainsbury Ave., during pre-game peak hour

12.3.3 Determination of Pedestrian Impacts

The CSU system has defined a significant pedestrian impact as a situation where,

- *“A project fails to provide safe pedestrian connections between campus buildings and adjacent streets and transit facilities. Or*
- *A project significantly disrupts existing or planned pedestrian facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”*

Based on this standard the 30,000-seat game does not impose any significant pedestrian impacts since the 30,000-seat game will include temporary control of intersections by traffic control officers who will be able to stop traffic to allow pedestrians to safely cross the street when going to and from the stadium.

The 30,000-seat game does not involve any construction activities that would disrupt any existing or planned pedestrian facilities.

12.3.4 Determination of Bicycle Impacts

The CSU system has defined a significant bicycle impact as a situation where, *“A project significantly disrupts existing or planned bicycle facilities or significantly conflicts with applicable non-automotive transportation plans, guidelines, policies, or standards.”* Based on this standard the 30,000-seat game does not impose any significant bicycle impacts since the 30,000-seat game does not involve any construction activities that would it disrupt any existing or planned bicycle facilities. The 30,000-seat game will include temporary control of intersections by traffic control officers whose presence will make the streets around StubHub Center safer for bicyclists than streets that are unsupervised.

Exhibit 134: Determination of Intersection Impact for the 2035 Sunday with 30,000 Seats

12.3.5 Determination of Transit Impacts

CSU guideline state that a significant transit impact would occur if, “A project significantly disrupts existing or planned transit facilities and services or significantly conflicts with applicable transit plans, guidelines, policies, or standards.” Based on this standard the 30,000-seat game does not impose any significant transit impacts since it would not disrupt any existing or planned transit facilities. The 30,000-seat game will complement the transit system by providing shuttle buses from transit centers to the stadium.

13 Recommended Mitigation Measures

This chapter begins with a discussion of how a Project's fair share contribution towards needed mitigations is calculated. This is followed by sections describing specific mitigations needed at sites where significant impacts are expected to occur.

13.1 Identification of Direct and Cumulative Impacts

CEQA distinguishes between direct impacts, which are attributable to the proposed project alone, and cumulative impacts, which are attributable to the proposed project in combination with other projects. Impacts that occur in the Existing Plus Project scenario are considered direct impacts, while impacts that do not occur in the Existing Plus Project scenario but do occur in future-year scenarios when other projects are assumed to have occurred are considered cumulative impacts. A project's responsibility (fair share) towards the cost of mitigations depends on the relationship between the existing, Project, and other project traffic volumes and the capacity of the facility. This is illustrated in Exhibit 135 for a facility with a notional capacity of 1,000 vehicles per hour:

Exhibit 135: Computing a Project's Fair Share of Mitigation Costs

- **Case 1:** The existing traffic volumes, combined with the traffic volumes from the proposed project and other proposed projects, is less than the capacity of the facility. In such cases the proposed project would have no impact and would bear no responsibility towards improving the facility.
- **Case 2:** The existing traffic volumes already exceed the capacity of the facility, but the proposed project would add so little traffic that its impact would be less than significant. In such cases the proposed project would bear no responsibility towards improving the facility.
- **Case 3:** The existing traffic volumes already exceed the capacity of the facility, and traffic from the proposed project would exacerbate the deficiency. This would be a *direct impact* since it would occur even in the absence of other proposed projects. Under state law a future project cannot be held responsible for correcting existing deficiencies but it is responsible for its share of the post-project problem. The proposed project's fair share is calculated as its share of the deficiency, or "a" divided by "b".
- **Case 4:** Case 4 is similar to Case 2 in that there is an existing deficiency and the proposed project would add so little traffic that its impact by itself would be less than significant. The difference is that in Case 5 traffic from other reasonably foreseeable projects is added whose combined impact would be significant. Since the proposed project adds very little traffic to the

facility its impact would not be cumulatively significant project and so the project would bear no responsibility towards improving the facility.

- Case 5: The existing volumes are less than the capacity of the facility, but the proposed project adds a considerable amount of traffic and the addition of the proposed project's traffic would create a deficiency where none currently exists. This would be a *direct impact* since it would occur even in the absence of other proposed projects. In such cases the proposed project would be responsible for the entire cost of the mitigation measures needed to correct the deficiency.
- Case 6: The combination of the existing traffic volume plus traffic from other projects would exceed the capacity of the facility, and the proposed project would add only a very small amount of traffic to the total. In such a case the proposed project's impact would be less than significant and the proposed project would bear no responsibility towards improving the facility.
- Case 7: The combination of the existing traffic volume plus the proposed project's traffic volume would be below the capacity of the facility, the proposed project adds considerable traffic, and the further addition of traffic from other foreseeable projects would exceed the capacity. This would be a *cumulative impact* since it would only occur when the effect of the proposed project is analyzed in combination with the effects of other proposed projects. In such cases the proposed project's fair share is calculated as its share of the foreseeable growth in traffic, or "c" divided by "d".

A proposed project's impacts on a given facility may be different for different analysis periods. For example, it may be a Case 1 situation in the AM peak hour and Case 3 in the PM peak hour. In this study we assume that the University will take responsibility based on its highest computed fair share in either peak hour. Using this approach, Exhibit 136 and Exhibit 137 show the impact type and the Project's fair share towards the cost of improvements at study intersections for Alternative 1 and Alternative 2, respectively. Exhibit 138 and Exhibit 139 show the percentage of the deficiency that is attributable to the Project for study freeway segments.

Exhibit 139: Percentage of the Deficiency that is Attributable to the Project, Freeways for Alternative 2 (continued)

13.2 Mitigations Needed with Alternative 1 by 2025

Analysis shown in Section 10.1 found that in 2025 the Project Alternative 1 would have impacts at 10 intersections and at 1 freeway segment. These are described in the sub-sections below.

13.2.1 Intersection Mitigations Needed with Alternative 1 by 2025

Exhibit 140 shows the measures that could be used to mitigate these impacts, which are also described below. Appendix T shows outlines of these measures on aerial photographs.

Intersection #1, Victoria St./Drive D

Because the Project would create a deficiency in the AM peak hour that would not exist in the absence of the Project, the University would be responsible for the full cost of this improvement. With implementation of the following improvement, operations at the intersection would improve to LOS A in the AM peak hour and LOS D in the PM peak hour, thus fully mitigating the project impact:

- Install traffic signal at intersection

However, this intersection is under the jurisdiction and control of the City of Carson and, accordingly, the University cannot guarantee implementation of this improvement. For this reason, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #3, Victoria St./Birchknoll Dr.

Because the Project would create a deficiency in the AM peak hour that would not exist in the absence of the Project, the University would be responsible for the full cost of this improvement. With implementation of the following improvement, operations at the intersection would improve to LOS B in the AM peak hour and LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add second westbound left-turn lane

However, this intersection is under the jurisdiction and control of the City of Carson and, accordingly, the University cannot guarantee implementation of this improvement. For this reason, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #5, Central Ave./Charles Willard St.

Because the Project would create a deficiency in the AM peak hour that would not exist in the absence of the Project, the University would be responsible for the full cost of this improvement. With implementation of the following improvement, operations at the intersection would improve to LOS B in the AM peak hour and LOS C in the PM peak hour, thus fully mitigating the project impact:

- Install traffic signal at intersection

However, this intersection is under the jurisdiction and control of the City of Carson and, accordingly, the University cannot guarantee implementation of this improvement. For this reason, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #6, Central Ave./Beachey Pl.

Because the Project would create a deficiency in the AM peak hour that would not exist in the absence of the Project, the University would be responsible for the full cost of this improvement. With implementation of the following improvement, operations at the intersection would improve to LOS A in the AM peak hour and LOS A in the PM peak hour, thus fully mitigating the project impact:

- Install traffic signal at intersection

However, this intersection is under the jurisdiction and control of the City of Carson and, accordingly, the University cannot guarantee implementation of this improvement. For this reason, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #13, Avalon Blvd./Victoria St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS B in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Convert eastbound exclusive right-turn lane into an eastbound through/right-turn shared lane
- Convert westbound exclusive right-turn lane into an eastbound through/right-turn shared lane
- Add second northbound left-turn lane

However, these improvements may be physically infeasible due to difficulties with the right of way for the additional northbound left-turn lane because high voltage power lines are located in the median of Avalon Blvd. In addition, this intersection is under the jurisdiction and control of the City of Carson, and, as such, the University cannot guarantee implementation of the improvements. Moreover, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. For these reasons, the recommended improvements are infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #14, Central Ave/Artesia Blvd. WB

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS C in the AM peak hour and to LOS B in the PM peak hours, thus fully mitigating the project impact:

- Add second northbound left-turn lane

However, since this improvement may be physically infeasible due to right-of-way constraints. In addition, the overcrossing is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #15, Central Ave./Albertoni St./Artesia Blvd. EB

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM and to LOS D in the PM peak hours, thus fully mitigating the project impact:

- Add second eastbound right-turn lane

However, since this improvement may be physically infeasible due to right-of-way constraints. In addition, the overcrossing is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #20, I-110 SB Off-Ramp/190th St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS D in the PM peak hours, thus fully mitigating the project impact:

- Add a southbound left/right-shared lane

However, this ramp is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #22, Figueroa St./190th St./Victoria St.

Because the Project would create a deficiency in the AM peak hour that would not exist in the absence of the Project, the University would be responsible for the full cost of this improvement. With implementation of the following improvements, operations at the intersection would improve to LOS C in the AM peak hour and to LOS D in the PM peak hours, thus fully mitigating the impact:

- Add third westbound through lane
- Add third eastbound through lane
- Re-phase the signal for protected left-turns for the eastbound and westbound phases.

However, this intersection is under the jurisdiction and control of the City of Carson and, accordingly, the University cannot guarantee implementation of this improvement. For this reason, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #24, Main St./Victoria St.

Because the Project would create a deficiency in the AM peak hour that would not exist in the absence of the Project, the University would be responsible for the full cost of this improvement. With implementation of the following improvements, operations at the intersection would improve to LOS C in the AM peak hour and to LOS D in the PM peak hours:

- Add westbound exclusive right-turn lane
- Add third eastbound through lane

However, this intersection is under the jurisdiction and control of the City of Carson and, accordingly, the University cannot guarantee implementation of this improvement. For this reason, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Study ID	Intersection Name	Control Type	With Project		Recommended Mitigation	With Mitigation	
			LOS (ICU or HCM)			LOS (ICU or HCM)	
			AM Peak Hour	PM Peak Hour		AM Peak Hour	PM Peak Hour
1	Victoria St./Drive D	TWSC	F	F	Signalize	A	D
3	Victoria St./Birchknoll Dr.	Signalized	D	F	Add 2nd WB Left-Turn Lane	B	D
5	Central Ave./Charles Willard St.	TWSC	F	F	Signalize	B	C
6	Central Ave./Beachey Pl.	TWSC	F	F	Signalize	A	A
13	Avalon Blvd./Victoria St.	Signalized	C	F	Add 2nd NB Left-Turn Lane, Convert EB Exclusive Right-Turn Lane to a Through/Right-Shared Lane, Convert WB Exclusive Right-Turn Lane to a Through/Right-Shared Lane	B	D
14	Central Ave./Artesia Blvd. WB	Signalized	D	E	Add 2nd NB Left-Turn Lane	C	B
15	Central Ave./Albertoni St./Artesia Blvd. EB	Signalized	F	E	Add 2nd EB Right-Turn Lane	D	D
20	I-110 SB Off-Ramp/190th St.	Signalized	F	F	Add a SB Left/Right-Shared Lane	D	F
22	Figueroa St./190th St./Victoria St.	Signalized	E	F	Add 3rd WB Through Lane, Add 3rd EB Through Lane	C	D
24	Main St./Victoria St.	Signalized	C	F	Add 3rd EB Through Lane, Add WB Exclusive Right-Turn Lane	C	D

Exhibit 140: Intersection Weekday Mitigations Needed by 2025 with Alternative 1

13.2.2 Weekday Freeway Mitigation 2025 - Alternative 1

Exhibit 141 shows the potential improvements that could be made to mitigate the significant impacts to freeway mainline segments that would result when project traffic is combined with other cumulative background traffic forecast to occur by year 2025. The percentage of the deficiency attributable to the project is illustrated in Table 138. The potential improvements for each significantly impacted segment are described in the following mitigation measures:

SR-91 eastbound, Avalon Blvd. to Central Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Avalon Boulevard to Central Avenue. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Central Ave. to Wilmington Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Central Avenue to Wilmington Avenue. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(1) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Wilmington Ave. to Alameda St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Wilmington Avenue to Alameda Street. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(1) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Alameda St. to Alameda St./Santa Fe Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Alameda Street to Alameda Street/Santa Fe Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(3) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Alameda St./Santa Fe Ave. to Long Beach Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Alameda Street/Santa Fe Avenue to Long Beach Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Long Beach Blvd. to Jct. Rte. 710

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Long Beach Boulevard to the Junction with Route 710. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Sepulveda Blvd. to Carson St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Sepulveda Boulevard to Carson Street. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Carson St. to Torrance/Del Amo Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Carson Street to Torrance/Del Amo Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Torrance/Del Amo Blvd. to Jct. Rte. 405

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Torrance/Del Amo Boulevard to the Junction with Route 405. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Jct. Rte. 405 to Jct. Rte. 91

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Junction with Route 405 to Junction with Route 91. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Carson St. to Avalon Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Carson Street to Avalon Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Avalon Blvd. to Jct. Rte. 110

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Avalon Boulevard to Junction with Route 110. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Jct. Rte. 110 to Vermont Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Junction with Route 110 to Vermont Avenue. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Normandie Ave. to Western Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Normandie Avenue to Western Avenue. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Western Ave. to Crenshaw Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Western Avenue to Crenshaw Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Crenshaw Blvd. to Artesia Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Crenshaw Boulevard to Artesia Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Avalon Blvd. to Central Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Avalon Boulevard to Central Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Central Ave. to Wilmington Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Central Avenue to Wilmington Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Wilmington Ave. to Alameda St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Wilmington Avenue to Alameda Street. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Alameda St. to Alameda St./Santa Fe Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Alameda Street to Alameda Street/Santa Fe Avenue. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Long Beach Blvd. to Jct. Rte. 710

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Long Beach Boulevard to the Junction with Route 710. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Sepulveda Blvd. to Carson St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Sepulveda Boulevard to Carson Street. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Carson St. to Torrance/Del Amo Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Carson Street to Torrance/Del Amo Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Torrance/Del Amo Blvd. to Jct. Rte. 405

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Torrance/Del Amo Boulevard to the Junction with Route 405. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Jct. Rte. 405 to Jct. Rte. 91

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Junction with Route 405 to the Junction with Route 91. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS F(2) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Redondo Beach Blvd. to Rosecrans Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Redondo Beach Boulevard to Rosecrans Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Rosecrans Ave. to El Segundo Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Rosecrans Avenue to El Segundo Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Century Blvd. to Manchester Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Century Boulevard to Manchester Avenue. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Slauson Ave. to 51st St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Slauson Avenue to 51st Street. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Carson St. to Avalon Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Carson Street to Avalon Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Avalon Blvd. to Jct. Rte. 110

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Avalon Boulevard to the Junction with Route 110. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Jct. Rte. 110 to Vermont Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Junction with Route 110 to Vermont Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Western Ave. to Crenshaw Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Western Avenue to Crenshaw Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Exhibit 141: Freeway Weekday Mitigation 2025 - Alternative 1

13.3 Weekday Mitigations Needed with Alternative 1 by 2035

Analysis shown in Section 12.1 found that in 2035 the Project would have impacts at 17 intersections and at 11 of the freeway segments. These are described in the sub-sections below.

13.3.1 Weekday Intersection Mitigations Needed with Alternative 1 by 2035

Exhibit 142 shows the measures that could be used to mitigate the impacts to intersections. Appendix T shows outlines of these measures on aerial photographs. In many cases measures used to mitigate impacts in 2025 would be part or all of the improvements needed to mitigate the Project's impacts in 2035.

Intersection #1, Victoria St./Drive D

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add second westbound left-turn lane
- Add second northbound left-turn lane and convert two-way left turn lane into median east of intersection
- Use overlap phasing for the eastbound right-turn movement

Note that this is in addition to the mitigation measure identified for this location as needed for 2025. The University's fair share contribution towards the improvements was calculated to be 66% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, this intersection is under the jurisdiction and control of the City of Carson and as such, the University cannot guarantee implementation of the improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. Additionally, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. For these reasons, the identified impact at this intersection is considered significant and unavoidable

Intersection #9, University Dr./Toro Center Dr.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Install traffic signal at intersection with overlap phasing for the westbound and southbound right-turn movements

The University's fair share contribution towards the improvements was calculated to be 65% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate

technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. However, this intersection is under the jurisdiction and control of the City of Carson and as such, the University cannot guarantee implementation of the improvements. Additionally, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. For these reasons, the identified impact at this intersection is considered significant and unavoidable.

Intersection #10, Albertoni St./SR-91 EB Ramps

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. Implementation of the following improvement would improve operations at the intersection to LOS B in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Convert the southbound exclusive right-turn lane into a shared left/right-turn shared lane

The percentage of the deficiency that is attributable to the Project for this improvement was calculated to be 50%. However, this ramp is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #12, Avalon Blvd./Albertoni St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvement, operations at the intersection would improve to LOS C in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add second exclusive eastbound right-turn lane

The University's fair share contribution towards this improvement was calculated to be 46% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, this intersection is under the jurisdiction and control of the City of Carson and, as such, the University cannot guarantee implementation of the improvement. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. Additionally, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. For these reasons, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #13, Avalon Blvd./Victoria St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add third westbound through lane instead of converting the west bound right-turn into a shared through/right-turn lane and move median south

Note that this is in addition to the mitigation measure identified for this location as needed for 2025. The University's fair share contribution towards the improvements was calculated to be 70% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, this intersection is under the jurisdiction and control of the City of Carson

and as such, the University cannot guarantee implementation of the improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. Additionally, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. For these reasons, the identified impact at this intersection is considered significant and unavoidable.

Intersection #14, Central Ave./Artesia Blvd. WB

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add second northbound left-turn lane

However, this improvement may be infeasible due to right-of-way constraints. In addition, this overcrossing is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #15, Central Ave./Albertoni St./Artesia Blvd. EB

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add third southbound through lane

However, these improvements may be infeasible due to right-of-way constraints. In addition, this overcrossing is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #16, Central Ave./Victoria St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvement, operations at the intersection would improve to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add third southbound through lane
- Add eastbound exclusive left-turn lane

However, these improvements may be physically infeasible due to right-of-way constraints. In addition, this intersection is under the jurisdiction and control of the City of Carson, and, as such, the University cannot guarantee implementation of the improvements. Moreover, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the recommended

improvements are infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #20, I-110 SB Off-Ramp/190th St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. Implementation of the following improvement would improve operations at the intersection to LOS E in the AM peak hour and to LOS F in the PM peak hour (i.e. better than for No Project conditions), thus fully mitigating the impact:

- Add a southbound left/right-shared lane

However, this ramp is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #22, Figueroa St./190th St./Victoria St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add second westbound left-turn lane
- Re-phase signal to provide protected left-turns for the eastbound and westbound phases

However, the addition second westbound left-turn lane improvement may be infeasible due to right-of-way constraints. In addition, this intersection is under the jurisdiction and control of the City of Carson, and, as such, the University cannot guarantee implementation of the improvements. Moreover, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the recommended improvements are infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #23, Broadway/Victoria St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS B in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add third westbound through lane
- Add eastbound right-turn lane

Note that this is in addition to the mitigation measure identified for this location as needed for 2025. The University's fair share contribution towards the improvements was calculated to be 73% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, this intersection is under the jurisdiction and control of the City of Carson and as such, the University cannot guarantee implementation of the improvements. Additionally, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all

appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the identified impact at this intersection is considered significant and unavoidable

Intersection #24, Main St./Victoria St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS B in the AM peak hour and to LOS E in the PM peak hour, (i.e. better than for No Project conditions), thus fully mitigating the impact:

- Convert westbound exclusive right-turn lane from the 2025 mitigations into westbound through/right-turn shared lane
- Add eastbound exclusive right-turn

The University's fair share contribution towards this improvement was calculated to be 71% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, the additional eastbound right-turn lane improvement may be infeasible due to right-of-way constraints. In addition, this intersection is under the jurisdiction and control of the City of Carson, and, as such, the University cannot guarantee implementation of the improvements. Moreover, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the recommended improvements are infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #26, Avalon Blvd./Del Amo Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvement, operations at the intersection would improve to LOS D in the AM peak hour and to LOS E in the PM peak hour, (i.e. better than for No Project conditions), thus fully mitigating the impact:

- Add southbound exclusive right-turn lane
- Convert the westbound exclusive right-turn lane into a westbound through/right-turn shared lane

The University's fair share contribution towards this improvement was calculated to be 55% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, this intersection is under the jurisdiction and control of the City of Carson and, as such, the University cannot guarantee implementation of the improvement. Additionally, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. . In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #29, Central Ave./University Dr.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations

at the intersection would improve to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add second eastbound left-turn lane
- Add second southbound right-turn lane

However, these improvements may be physically infeasible due to right-of-way constraints. In addition, this intersection is under the jurisdiction and control of the City of Carson, and, as such, the University cannot guarantee implementation of the improvements. Moreover, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. . In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the recommended improvements are infeasible and the identified impact at this intersection is considered significant and unavoidable.

22	Figueroa St./190th St./Victoria St.	Signalized	E	F	Add 3rd WB Through Lane, Add 3rd EB Through Lane	Add 2nd WB Left-Turn Lane	D	D
23	Broadway/Victoria St.	Signalized	C	E		Add 3rd WB Through Lane, Add EB Right-Turn Lane	B	D
24	Main St./Victoria St.	Signalized	D	F	Add 3rd EB Through Lane, Add WB Exclusive Right-Turn Lane	Add 3rd WB Through Lane (instead of the WB Exclusive Right-Turn Lane) Add EB Exclusive Right-Turn Lane	B	E
26	Avalon Blvd./Del Amo Blvd.	Signalized	E	F		Add SB Exclusive Right-Turn Lane Convert WB Exclusive Right-Turn Lane into an WB Through/Right-Shared Lane	D	E
29	Central Ave./University Dr.	Signalized	F	F		Add 2nd EB Left-Turn Lane, Add 2nd SB Right-Turn Lane	D	C

Exhibit 142: Intersection Weekday Mitigations Needed by 2035 with Alternative 1

13.3.2 Weekday Freeway Mitigations Needed with Alternative 1 by 2035

Exhibit 143 shows the potential improvements that could be made to mitigate the significant impacts to freeway mainline segments that would result when Project traffic is combined with other cumulative background traffic forecast to occur by year 2035. The percentage of the deficiency attributable to the project is illustrated in Table 138. The potential improvements for each significantly impacted segment not already addressed by the improvements referenced under the 2025 scenario are described in the following mitigation measures:

SR-91 eastbound, Jct. Rte. 110 to Avalon Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Junction with Route 110 to Avalon Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS B in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Jct. Rte. 710 to Cherry Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Junction Route 710 to Cherry Avenue. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Cherry Ave. to Paramount Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Cherry Avenue to Paramount Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Paramount Blvd. to Downey Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Paramount Boulevard to Downey Avenue.

Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Downey Ave. to Jct. Rte. 19

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Downey Avenue to Junction with Route 19. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Jct. Rte. 19 to Clark Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Junction Route 19 to Clark Avenue. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Clark Ave. to Bellflower Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Clark Avenue to Bellflower Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Rosecrans Ave. to El Segundo Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Rosecrans Avenue to El Segundo Boulevard.

Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, El Segundo Blvd. to Jct. Rte. 105

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, El Segundo Boulevard to Junction with Route 105. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Century Blvd. to Manchester Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Century Boulevard to Manchester Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Manchester Ave. to Florence Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Manchester Avenue to Florence Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Florence Ave. to Gage Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Florence Avenue to Gage Avenue. Implementation of the

following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Gage Ave. to Slauson Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Gage Avenue to Slauson Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Slauson Ave. to 51st St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Slauson Avenue to 51st Street. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, 51st St. to Vernon Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, 51st Street to Vernon Avenue. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Vernon Ave. to Martin Luther King Jr. Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Vernon Avenue to Martin Luther King Jr. Boulevard.

Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Cherry Ave. to Orange Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Cherry Avenue to Orange Avenue. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Orange Ave. to Atlantic Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Orange Avenue to Atlantic Avenue. Implementation of the following improvement would improve operations at the freeway to LOS F(2) in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Atlantic Ave. to Long Beach Blvd

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Atlantic Avenue to Long Beach Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS F(2) in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Jct. Rte. 710 to Alameda St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Junction Route 710 to Alameda Street. Implementation of

the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Alameda St. to Wilmington Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Alameda Street to Wilmington Avenue. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Wilmington Ave. to Carson St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Wilmington Avenue to Carson Street. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Vermont Ave. to Normandie Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Vermont Avenue to Normandie Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Hawthorne Blvd. to Inglewood Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Hawthorne Boulevard to Inglewood Avenue.

Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Inglewood Ave. to Rosecrans Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Inglewood Avenue to Rosecrans Avenue. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Jct. Rte. 110 to Avalon Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Junction Route 110 to Avalon Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS F(3) in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Alameda St./Santa Fe Ave. to Long Beach Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Alameda Street/Santa Fe Avenue to Long Beach Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Jct. Rte. 710 to Cherry Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Junction Route 710 to Cherry Avenue. Implementation of

the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Cherry Ave. to Paramount Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Cherry Avenue to Paramount Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Paramount Blvd. to Downey Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Paramount Boulevard to Downey Avenue. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Downey Ave. to Jct. Rte. 19

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Downey Avenue to the Junction with Route 19. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Jct. Rte. 19 to Clark Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Junction Route 19 to Clark Avenue. Implementation of

the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Clark Ave. to Bellflower Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Clark Avenue to Bellflower Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Bellflower Blvd. to Jct. Rte. 605

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Bellflower Boulevard to Junction with Route 605. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Manchester Ave. to Florence Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Manchester Avenue to Florence Avenue. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Florence Ave. to Gage Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Florence Avenue to Gage Avenue. Implementation of the

following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Gage Ave. to Slauson Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Gage Avenue to Slauson Avenue. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, 51st St. to Vernon Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, 51st Street to Vernon Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Vernon Ave. to Martin Luther King Jr. Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Vernon Avenue to Martin Luther King Jr. Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Martin Luther King Jr. Blvd. to Exposition Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Martin Luther King Jr. Boulevard to Exposition Boulevard.

Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Orange Ave. to Atlantic Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Orange Avenue to Atlantic Avenue. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS F(1) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Long Beach Blvd to Jct. Rte. 710

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Long Beach Boulevard to the Junction with Route 710. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Jct. Rte. 710 to Alameda St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Junction Route 710 to Alameda Street. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Alameda St. to Wilmington Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Alameda Street to Wilmington Avenue. Implementation of

the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Wilmington Ave. to Carson St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Wilmington Avenue to Carson Street. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Vermont Ave. to Normandie Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Vermont Avenue to Normandie Avenue. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Normandie Ave. to Western Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Normandie Avenue to Western Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Crenshaw Blvd. to Artesia Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Crenshaw Boulevard to Artesia Boulevard. Implementation

of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Artesia Blvd. to Hawthorne Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Artesia Boulevard to Hawthorne Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Hawthorne Blvd. to Inglewood Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Hawthorne Boulevard to Inglewood Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-710 southbound, Alondra Blvd. to Jct. Rte. 105

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-710 southbound, Alondra Boulevard to Junction Route 105. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Exhibit 143: Freeway Weekday Mitigation 2035 - Alternative 1 (continued)

13.4 Mitigations Needed with Alternative 2 by 2025

Analysis shown in Section 10.2 found that in 2025 the Project Alternative 2 would have impacts at 11 intersections and at 1 freeway segment. These are described in the sub-sections below.

13.4.1 Intersection Mitigations Needed with Alternative 2 by 2025

Exhibit 140 shows the measures that could be used to mitigate these impacts, which are also described below. Appendix T shows outlines of these measures on aerial photographs.

Intersection #1, Victoria St./Drive D

Because the Project would create a deficiency in the AM peak hour that would not exist in the absence of the Project, the University would be responsible for the full cost of this improvement. With implementation of the following improvement, operations at the intersection would improve to LOS A in the AM peak hour and LOS D in the PM peak hour, thus fully mitigating the project impact:

- Install traffic signal at intersection

However, this intersection is under the jurisdiction and control of the City of Carson and, accordingly, the University cannot guarantee implementation of this improvement. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For this reason, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #3, Victoria St./Birchknoll Dr.

Because the Project would create a deficiency in the AM peak hour that would not exist in the absence of the Project, the University would be responsible for the full cost of this improvement. With implementation of the following improvement, operations at the intersection would improve to LOS B in the AM peak hour and LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add second westbound left-turn lane

However, this intersection is under the jurisdiction and control of the City of Carson and, accordingly, the University cannot guarantee implementation of this improvement. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For this reason, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #5, Central Ave./Charles Willard St.

Because the Project would create a deficiency in the AM peak hour that would not exist in the absence of the Project, the University would be responsible for the full cost of this improvement. With implementation of the following improvement, operations at the intersection would improve to LOS B in the AM peak hour and LOS C in the PM peak hour, thus fully mitigating the project impact:

- Install traffic signal at intersection

However, this intersection is under the jurisdiction and control of the City of Carson and, accordingly, the University cannot guarantee implementation of this improvement. In the event that,

prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For this reason, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #6, Central Ave./Beachey Pl.

Because the Project would create a deficiency in the AM peak hour that would not exist in the absence of the Project, the University would be responsible for the full cost of this improvement. With implementation of the following improvement, operations at the intersection would improve to LOS A in the AM peak hour and LOS A in the PM peak hour, thus fully mitigating the project impact:

- Install traffic signal at intersection

However, this intersection is under the jurisdiction and control of the City of Carson and, accordingly, the University cannot guarantee implementation of this improvement. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For this reason, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #13, Avalon Blvd./Victoria St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS B in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Convert eastbound exclusive right-turn lane into an eastbound through/right-turn shared lane
- Convert westbound exclusive right-turn lane into an eastbound through/right-turn shared lane
- Add second northbound left-turn lane

However, these improvements may be physically infeasible due to difficulties with the right of way for the additional northbound left-turn lane because high voltage power lines are located in the median of Avalon Blvd. In addition, this intersection is under the jurisdiction and control of the City of Carson, and, as such, the University cannot guarantee implementation of the improvements. Moreover, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the recommended improvements are infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #14, Central Ave./Artesia Blvd. WB

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS C in the AM peak hour and to LOS B in the PM peak hours, thus fully mitigating the project impact:

- Add second northbound left-turn lane

However, since this improvement may be physically infeasible due to right-of-way constraints. In addition, the overcrossing is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #15, Central Ave./Albertoni St./Artesia Blvd. EB

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM and to LOS D in the PM peak hours, thus fully mitigating the project impact:

- Add second eastbound right-turn lane

However, since this improvement may be physically infeasible due to right-of-way constraints. In addition, the overcrossing is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #20, I-110 SB Off-Ramp/190th St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour. It would also improve the V/C in the PM peak hour to better than the No Project condition, thus fully mitigating the impact:

- Add a southbound left/right-shared lane

However, this ramp is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #22, Figueroa St./190th St./Victoria St.

Because the Project would create a deficiency in the AM peak hour that would not exist in the absence of the Project, the University would be responsible for the full cost of this improvement. With implementation of the following improvements, operations at the intersection would improve to LOS C in the AM peak hour and to LOS D in the PM peak hours, thus fully mitigating the impact :

- Add third westbound through lane
- Add third eastbound through lane
- Re-phase the signal for protected left-turns for the eastbound and westbound phases.

However, this intersection is under the jurisdiction and control of the City of Carson and, accordingly, the University cannot guarantee implementation of this improvement. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For this reason, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #24, Main St./Victoria St.

Because the Project would create a deficiency in the AM peak hour that would not exist in the absence of the Project, the University would be responsible for the full cost of this improvement. With implementation of the following improvements, operations at the intersection would improve to LOS C in the AM peak hour and to LOS D in the PM peak hours:

- Add westbound exclusive right-turn lane
- Add third eastbound through lane

However, this intersection is under the jurisdiction and control of the City of Carson and, accordingly, the University cannot guarantee implementation of this improvement. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For this reason, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #26, Avalon Blvd./Del Amo Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. Implementation of the following improvement would improve operations at the intersection to LOS D in the AM peak hour and to E in the PM peak hour, (i.e. better than for No Project conditions), thus fully mitigating the impact:

- Add southbound exclusive right-turn lane

The University's fair share contribution towards this improvement was calculated to be 37% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, this intersection is under the jurisdiction and control of the City of Carson and, as such, the University cannot guarantee implementation of the improvement. Additionally, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Study ID	Intersection Name	Control Type	With Project		Recommended Mitigation	With Mitigation	
			LOS (ICU or HCM)			LOS (ICU or HCM)	
			AM Peak Hour	PM Peak Hour		AM Peak Hour	PM Peak Hour
1	Victoria St./Drive D	TWSC	F	F	Signalize	A	D
3	Victoria St./Birchknoll Dr.	Signalized	C	F	Add 2nd WB Left-Turn Lane	B	D

Exhibit 144: Intersection Weekday Mitigations Needed by 2025 with Alternative 2

13.4.2 Weekday Freeway Mitigations Needed with Alternative 2 by 2025

Exhibit 145 shows the potential improvements that could be made to mitigate the significant impacts to freeway mainline segments that would result when project traffic is combined with other cumulative background traffic forecast to occur by year 2025. The percentage of the deficiency attributable to the project is illustrated in Table 139. The potential improvements for each significantly impacted segment are described in the following mitigation measures:

SR-91 eastbound, Avalon Blvd. to Central Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Avalon Boulevard to Central Avenue. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Central Ave. to Wilmington Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Central Avenue to Wilmington Avenue. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(1) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Wilmington Ave. to Alameda St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Wilmington Avenue to Alameda Street. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(1) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Alameda St. to Alameda St./Santa Fe Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Alameda Street to Alameda Street/Santa Fe Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(3) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Sepulveda Blvd. to Carson St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Sepulveda Boulevard to Carson Street. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Carson St. to Torrance/Del Amo Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Carson Street to Torrance/Del Amo Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Torrance/Del Amo Blvd. to Jct. Rte. 405

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Torrance/Del Amo Boulevard to Junction with Route 405. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Jct. Rte. 405 to Jct. Rte. 91

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Junction Route 405 to Junction Route 91. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Carson St. to Avalon Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Carson Street to Avalon Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Avalon Blvd. to Jct. Rte. 110

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Avalon Boulevard to Junction Route 110. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Jct. Rte. 110 to Vermont Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Junction Route 110 to Vermont Avenue. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Normandie Ave. to Western Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Normandie Avenue to Western Avenue. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Western Ave. to Crenshaw Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Western Avenue to Crenshaw Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Crenshaw Blvd. to Artesia Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Crenshaw Boulevard to Artesia Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Central Ave. to Wilmington Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Central Avenue to Wilmington Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Wilmington Ave. to Alameda St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Wilmington Avenue to Alameda Street. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Alameda St. to Alameda St./Santa Fe Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Alameda Street to Alameda Street/Santa Fe Avenue. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Long Beach Blvd. to Jct. Rte. 710

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Long Beach Boulevard to Junction Route 710. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Sepulveda Blvd. to Carson St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Sepulveda Boulevard to Carson Street. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Carson St. to Torrance/Del Amo Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Carson Street to Torrance/Del Amo Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Torrance/Del Amo Blvd. to Jct. Rte. 405

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Torrance/Del Amo Boulevard to Junction Route 405. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Jct. Rte. 405 to Jct. Rte. 91

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Junction Route 405 to Junction Route 91. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS F(2) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Rosecrans Ave. to El Segundo Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Rosecrans Avenue to El Segundo Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Century Blvd. to Manchester Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Century Boulevard to Manchester Avenue. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Carson St. to Avalon Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Carson Street to Avalon Boulevard. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Avalon Blvd. to Jct. Rte. 110

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Avalon Boulevard to Junction Route 110. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Jct. Rte. 110 to Vermont Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Junction Route 110 to Vermont Avenue. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Exhibit 145: Freeway Weekday Mitigations Needed by 2025 with Alternative 2

13.5 Weekday Mitigations Needed with Alternative 2 by 2035

Analysis shown in Section 12.2 found that in 2035 the Project would have impacts at 17 intersections and at 11 of the freeway segments. These are described in the sub-sections below.

13.5.1 Weekday Intersection Mitigations Needed with Alternative 2 by 2035

Exhibit 142 shows the measures that could be used to mitigate the impacts to intersections. Appendix T shows outlines of these measures on aerial photographs.

Intersection #1, Victoria St./Drive D

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add second westbound left-turn lane
- Add second northbound left-turn lane and convert two-way left turn lane into median east of intersection
- Use overlap phasing for the eastbound right-turn movement

Note that this is in addition to the mitigation measure identified for this location as needed for 2025. The University's fair share contribution towards the improvements was calculated to be 65% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, this intersection is under the jurisdiction and control of the City of Carson and as such, the University cannot guarantee implementation of the improvements. Additionally, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the identified impact at this intersection is considered significant and unavoidable.

Intersection #9, University Dr./Toro Center Dr.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Install traffic signal at intersection with overlap phasing for the westbound and southbound right-turn movements

The University's fair share contribution towards the improvements was calculated to be 61% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, this intersection is under the jurisdiction and control of the City of Carson and as such, the University cannot guarantee implementation of the improvements. Additionally, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the identified impact at this intersection is considered significant and unavoidable.

Intersection #10, Albertoni St./SR-91 EB Ramps

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. Implementation of the following improvement would improve operations at the intersection to LOS B in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Convert the southbound exclusive right-turn lane into a shared left/right-turn shared lane

The percentage of the deficiency that is attributable to the Project for this improvement was calculated to be 50%. However, this ramp is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #12, Avalon Blvd./Albertoni St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvement, operations at the intersection would improve to LOS C in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add second exclusive eastbound right-turn lane

The University's fair share contribution towards this improvement was calculated to be 44% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, this intersection is under the jurisdiction and control of the City of Carson and, as such, the University cannot guarantee implementation of the improvement. Additionally, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #13, Avalon Blvd./Victoria St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS C in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add third westbound through lane instead of converting the west bound right-turn into a shared through/right-turn lane and move median south

Note that this is in addition to the mitigation measure identified for this location as needed for 2025. The University's fair share contribution towards the improvements was calculated to be 68% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, this intersection is under the jurisdiction and control of the City of Carson and as such, the University cannot guarantee implementation of the improvements. Additionally, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the identified impact at this intersection is considered significant and unavoidable.

Intersection #14, Central Ave/Artesia Blvd. WB

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add second northbound left-turn lane

However, this improvement may be infeasible due to right-of-way constraints. In addition, this overcrossing is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #15, Central Ave./Albertoni St./Artesia Blvd. EB

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add third southbound through lane

However, these improvements may be infeasible due to right-of-way constraints. In addition, this overcrossing is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #16, Central Ave./Victoria St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add third southbound through lane
- Add eastbound exclusive left-turn lane

However, these improvements may be physically infeasible due to right-of-way constraints. In addition, this intersection is under the jurisdiction and control of the City of Carson, and, as such, the University cannot guarantee implementation of the improvements. Moreover, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the recommended improvements are infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #20, I-110 SB Off-Ramp/190th St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. Implementation of the following improvement would improve

operations at the intersection to LOS E in the AM peak hour and to LOS F in the PM peak hour (i.e. better than for No Project conditions), thus fully mitigating the impact:

- Add a southbound left/right-shared lane

However, this ramp is under the jurisdiction and control of Caltrans, a different State agency from CSU. Nonetheless, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. However, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Intersection #22, Figueroa St./190th St./Victoria St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add second westbound left-turn lane
- Re-phase signal to provide protected left-turns for the eastbound and westbound phases

However, the addition second westbound left-turn lane improvement may be infeasible due to right-of-way constraints. In addition, this intersection is under the jurisdiction and control of the City of Carson, and, as such, the University cannot guarantee implementation of the improvements. Moreover, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the recommended improvements are infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #23, Broadway/Victoria St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS B in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add third westbound through lane
- Add eastbound right-turn lane

Note that this is in addition to the mitigation measure identified for this location as needed for 2025. The University's fair share contribution towards the improvements was calculated to be 72% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, this intersection is under the jurisdiction and control of the City of Carson and as such, the University cannot guarantee implementation of the improvements. Additionally, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the identified impact at this intersection is considered significant and unavoidable.

Intersection #24, Main St./Victoria St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS B in the AM peak hour and to LOS E in the PM peak hour, (i.e. better than for No Project conditions), thus fully mitigating the impact:

- Convert westbound exclusive right-turn lane from the 2025 mitigations into westbound through/right-turn shared lane
- Add eastbound exclusive right-turn

The University's fair share contribution towards this improvement was calculated to be 70% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, the additional eastbound right-turn lane improvement may be infeasible due to right-of-way constraints. In addition, this intersection is under the jurisdiction and control of the City of Carson, and, as such, the University cannot guarantee implementation of the improvements. Moreover, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the recommended improvements are infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #26, Avalon Blvd./Del Amo Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvement, operations at the intersection would improve to LOS D in the AM peak hour and to LOS E in the PM peak hour, (i.e. better than for No Project conditions), thus fully mitigating the impact:

- Convert the westbound exclusive right-turn lane into a westbound through/right-turn shared lane

Note that this is in addition to the mitigation measure identified for this location as needed for 2025. The University's fair share contribution towards this improvement was calculated to be 54% provided that such funds shall be used only for the above improvements that ultimately benefit CSU and the local community. However, this intersection is under the jurisdiction and control of the City of Carson and, as such, the University cannot guarantee implementation of the improvement. Additionally, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the recommended improvement is infeasible and the identified impact at this intersection is considered significant and unavoidable.

Intersection #29, Central Ave./University Dr.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the intersection. With implementation of the following improvements, operations at the intersection would improve to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add second eastbound left-turn lane
- Add second southbound right-turn lane

However, these improvements may be physically infeasible due to right-of-way constraints. In addition, this intersection is under the jurisdiction and control of the City of Carson, and, as such, the University cannot guarantee implementation of the improvements. Moreover, the City does not currently have an adopted fee program in place to provide the non-CSU portion of the cost of improvements. In the event that, prior to Board of Trustees approval of the CSUDH 2018 Master Plan, the City of Carson adopts a transportation impact fee program, supported by all appropriate technical studies, that would provide for the funding and construction of the following improvements at the subject intersection, CSU shall pay its fair share. For these reasons, the recommended improvements are infeasible and the identified impact at this intersection is considered significant and unavoidable.

Exhibit 146: Intersection Weekday Mitigations Needed by 2035 with Alternative 2

13.5.2 Weekday Freeway Mitigations Needed with Alternative 2 by 2035

Exhibit 147 shows the potential improvements that could be made to mitigate the significant impacts to freeway mainline segments that would result when project traffic is combined with other cumulative background traffic forecast to occur by year 2035. The percentage of the deficiency attributable to the project is illustrated in Table 139. The potential improvements for each significantly impacted segment not already mitigated by the improvements referenced under the 2025 scenario are described in the following mitigation measures:

SR-91 eastbound, Jct. Rte. 110 to Avalon Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Jct. Rte. 110 to Avalon Blvd. Implementation of the following improvement would improve operations at the freeway to LOS B in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Alameda St./Santa Fe Ave. to Long Beach Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Alameda St./Santa Fe Ave. to Long Beach Blvd. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Long Beach Blvd. to Jct. Rte. 710

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Long Beach Blvd. to Jct. Rte. 710. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Jct. Rte. 710 to Cherry Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Jct. Rte. 710 to Cherry Ave. Implementation of the

following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Cherry Ave. to Paramount Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Cherry Ave. to Paramount Blvd. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Paramount Blvd. to Downey Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Paramount Blvd. to Downey Ave. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Downey Ave. to Jct. Rte. 19

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Downey Ave. to Jct. Rte. 19. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 eastbound, Jct. Rte. 19 to Clark Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 eastbound, Jct. Rte. 19 to Clark Ave. Implementation of the following

improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Rosecrans Ave. to El Segundo Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Rosecrans Ave. to El Segundo Blvd. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, El Segundo Blvd. to Jct. Rte. 105

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, El Segundo Blvd. to Jct. Rte. 105. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Century Blvd. to Manchester Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Century Blvd. to Manchester Ave. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Manchester Ave. to Florence Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Manchester Ave. to Florence Ave. Implementation of the

following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Gage Ave. to Slauson Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Gage Ave. to Slauson Ave. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Slauson Ave. to 51st St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Slauson Ave. to 51st St. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, 51st St. to Vernon Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, 51st St. to Vernon Ave. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 northbound, Vernon Ave. to Martin Luther King Jr. Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 northbound, Vernon Ave. to Martin Luther King Jr. Blvd.

Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Orange Ave. to Atlantic Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Orange Ave. to Atlantic Ave. Implementation of the following improvement would improve operations at the freeway to LOS F(2) in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Atlantic Ave. to Long Beach Blvd

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Atlantic Ave. to Long Beach Blvd. Implementation of the following improvement would improve operations at the freeway to LOS F(2) in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Jct. Rte. 710 to Alameda St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Jct. Rte. 710 to Alameda St. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Alameda St. to Wilmington Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Alameda St. to Wilmington Ave. Implementation of the

following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Wilmington Ave. to Carson St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Wilmington Ave. to Carson St. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Vermont Ave. to Normandie Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Vermont Ave. to Normandie Ave. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Hawthorne Blvd. to Inglewood Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Hawthorne Blvd. to Inglewood Ave. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 northbound, Inglewood Ave. to Rosecrans Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 northbound, Inglewood Ave. to Rosecrans Ave. Implementation of the

following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Jct. Rte. 110 to Avalon Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Jct. Rte. 110 to Avalon Blvd. Implementation of the following improvement would improve operations at the freeway to LOS F(3) in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Avalon Blvd. to Central Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Avalon Blvd. to Central Ave. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Alameda St./Santa Fe Ave. to Long Beach Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Alameda St./Santa Fe Ave. to Long Beach Blvd. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Jct. Rte. 710 to Cherry Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Jct. Rte. 710 to Cherry Ave. Implementation of the

following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Cherry Ave. to Paramount Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Cherry Ave. to Paramount Blvd. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Paramount Blvd. to Downey Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Paramount Blvd. to Downey Ave. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Downey Ave. to Jct. Rte. 19

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Downey Ave. to Jct. Rte. 19. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Jct. Rte. 19 to Clark Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Jct. Rte. 19 to Clark Ave. Implementation of the following

improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Clark Ave. to Bellflower Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Clark Ave. to Bellflower Blvd. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

SR-91 westbound, Bellflower Blvd. to Jct. Rte. 605

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the SR-91 westbound, Bellflower Blvd. to Jct. Rte. 605. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Redondo Beach Blvd. to Rosecrans Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Redondo Beach Blvd. to Rosecrans Ave. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Manchester Ave. to Florence Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Manchester Ave. to Florence Ave. Implementation of the

following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Florence Ave. to Gage Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Florence Ave. to Gage Ave. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Gage Ave. to Slauson Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Gage Ave. to Slauson Ave. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Slauson Ave. to 51st St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Slauson Ave. to 51st St. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, 51st St. to Vernon Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, 51st St. to Vernon Ave. Implementation of the following

improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Vernon Ave. to Martin Luther King Jr. Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Vernon Ave. to Martin Luther King Jr. Blvd. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-110 southbound, Martin Luther King Jr. Blvd. to Exposition Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-110 southbound, Martin Luther King Jr. Blvd. to Exposition Blvd. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS D in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Orange Ave. to Atlantic Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Orange Ave. to Atlantic Ave. Implementation of the following improvement would improve operations at the freeway to LOS F(0) in the AM peak hour and to LOS F(1) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Long Beach Blvd to Jct. Rte. 710

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Long Beach Blvd to Jct. Rte. 710. Implementation of the

following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Jct. Rte. 710 to Alameda St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Jct. Rte. 710 to Alameda St. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Alameda St. to Wilmington Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Alameda St. to Wilmington Ave. Implementation of the following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Wilmington Ave. to Carson St.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Wilmington Ave. to Carson St. Implementation of the following improvement would improve operations at the freeway to LOS E in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Vermont Ave. to Normandie Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Vermont Ave. to Normandie Ave. Implementation of the

following improvement would improve operations at the freeway to LOS C in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Normandie Ave. to Western Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Normandie Ave. to Western Ave. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Western Ave. to Crenshaw Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Western Ave. to Crenshaw Blvd. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Crenshaw Blvd. to Artesia Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Crenshaw Blvd. to Artesia Blvd. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Artesia Blvd. to Hawthorne Blvd.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Artesia Blvd. to Hawthorne Blvd. Implementation of the

following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS E in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-405 southbound, Hawthorne Blvd. to Inglewood Ave.

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-405 southbound, Hawthorne Blvd. to Inglewood Ave. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS F(0) in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

I-710 southbound, Alondra Blvd. to Jct. Rte. 105

The Project, in combination with other reasonably foreseeable projects, would have a significant cumulative impact at the I-710 southbound, Alondra Blvd. to Jct. Rte. 105. Implementation of the following improvement would improve operations at the freeway to LOS D in the AM peak hour and to LOS C in the PM peak hour, thus fully mitigating the project impact:

- Add a general purpose lane

However, this freeway is under the jurisdiction and control of Caltrans, a different State agency from CSU. Accordingly, CSU shall support Caltrans in its efforts to obtain funding from the Legislature for the costs to implement the improvement. As such, since the University cannot guarantee implementation of this improvement, this impact is considered significant and unavoidable.

Northbound/Eastbound

Exhibit 147: Freeway Weekday Mitigations Needed by 2035 with Alternative 2 (continued)

13.6 Sunday Mitigations Needed by 2035

13.6.1 Sunday Pre-Game Mitigations Needed by 2035

As seen in Section 12.3, in the pre-game peak hour, the full CMP build out with 30,000-seat game will have impacts at three intersections. Exhibit 148 shows mitigations that could be added to pre-game the traffic management plan and Exhibit 149 shows mitigations that could be added to post-game the traffic management plan.

Intersection #9, University Dr./Toro Center Dr.

The traffic management plan for the game will include the following mitigation measure:

- Officer Control
- Temporarily convert one of the two eastbound through lanes into to a second eastbound left-turn lane

With these measures, operations of the intersection will improve to LOS A for the pre-game peak hour and the impact will be reduced to a less than significant level.

Intersection #25, Avalon Blvd./University Dr.

The traffic management plan for the game will include the following mitigation measure:

- Officer Control
- Temporarily provide overlap phasing for the northbound right-turn movement

With these measures, operations of the intersection will improve to LOS D for the pre-game peak hour and the impact will be reduced to a less than significant level.

Intersection #41, Victoria St./Rainsbury Ave.

The traffic management plan for the game will include following mitigation measure:

- Temporarily extend with cones eastbound right-turn lane for Intersection #1, Victoria St./Gate D, back to before Intersection #41 providing three eastbound through lanes at Intersection #41.

With this measure, operations of the intersection will improve to LOS C for the pre-game peak hour and the impact will be reduced to a less than significant level.

13.6.2 Sunday Post-Game Mitigations Needed by 2035

As seen in Section 12.3, in the post-game peak hour, the full CMP build out with 30,000-seat game will have impacts at one intersections. Exhibit 149 shows mitigations that could be added to the traffic management plan.

Intersection #3, Victoria St./Birchknoll Dr.

The traffic management plan for the game will include the following mitigation measure:

- temporarily cone an additional east bound through lane

With this measure, operations of the intersection will improve to LOS D for the pre-game peak hour and the impact will be reduced to a less than significant level. This addition is feasible due to the 30 plus feet of right of way for the eastbound lanes on Victoria Street. The left-most lane can then be coned to become the left turn lane at Intersection #16.

Study ID	Intersection Name	Control Type	ICU LOS	Recommended Mitigation	ICU LOS
9	University Dr./Toro Center Dr.	TWSC	E	1 of the 2 EB Through lanes to a 2 nd EB Left Turn Lane	A
25	Avalon Blvd./University Dr.	Signalized	E	Overlap Phasing for NB Right Turn Lane	D
41	Victoria St./Rainsbury Ave.	TWSC	F	Provide 3 EB Through lanes	C

Study ID	Intersection Name	Control Type	ICU LOS	Recommended Mitigation	ICU LOS
3	Victoria St./Birchknoll Dr.	Signalized	F	Add EB Through Lane Lane	D

Exhibit 149: Intersection Sunday Mitigations for 2035 and 30,000-Seats during Post-Game Peak Hour

13.7 Triggers for Mitigations

It is the intention of the University to implement the intersection mitigations described in the preceding chapters prior to the onset of the impacts that would cause them to be needed. Exhibit 150 identifies specific triggers for each of the mitigation measures identified in earlier chapters as being physically feasible. The triggers link the mitigations to the specific component of the Project that causes the impact. For example, Intersection 1 serves the main parking lots for off-campus students, so improvements to this intersection would be triggered by increases in off-campus student enrolment. Similarly, Intersection 5 and 6 will serve the business park and market-rate apartment components of the Project and so improvements to those intersections would be triggered by construction of those buildings.

Readers should note that it may not always be possible for the University to control the timing of improvements since the off-campus facilities that need to be improved are all under the jurisdiction of other entities. Nevertheless the University will make reasonable efforts to seek their cooperation in implementing the mitigation measures in a timely manner.

Intersection		Recommended Mitigation	Trigger for Implementation
1	Victoria St./Drive D	Signalize	Prior to occupancy of building(s) that would allow off-campus student enrollment to increase more than 400 FTES, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
		Add 2nd WB left turn lane	Prior to occupancy of building(s) that would allow off-campus student enrollment to increase more than 2,400 FTES, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
3	Victoria St./Birchknoll Dr.	Add 2d WB Left-Turn Lane	Prior to start of construction of mixed-use component, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
5	Central Ave./Charles Willard St.	Signalize	Prior to construction of any of the 3 northern business park buildings, or the construction of either of the 2 northern market-rate apartment buildings, whichever comes first, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
6	Central Ave./Beachey Pl.	Signalize	Prior to construction of any of the 4 southern business park buildings, or the construction of either the southern-most market-rate apartment building or the construction of student apartments, whichever comes first, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
9	University Dr./Toro Center Dr.	Signalize	Prior to occupancy of building(s) that would allow off-campus student enrollment to increase more than 5,600 FTES, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
12	Avalon Blvd./Albertoni St.	Add 2nd Exclusive EB Right-Turn Lane	Prior to occupancy of building(s) that would allow off-campus student enrollment to increase more than 2,400 FTES, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
13	Avalon Blvd./Victoria St.	Add 2nd NB Left-Turn Lane, Convert EB Exclusive Right-Turn Lane to a Through/Right-Shared Lane	Prior to occupancy of the mixed-use area, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
		Add 3rd WB Through Lane	Prior to occupancy of building(s) that would allow off-campus student enrollment to increase more than 2,400 FTES, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
22	Figueroa St./190th St./Victoria St.	Add 3rd WB Through Lane, Add 3rd EB Through Lane	Prior to occupancy of the mixed-use area, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
		Add 2nd WB Left-Turn Lane	Prior to occupancy of building(s) that would allow off-campus student enrollment to increase more than 2,400 FTES, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
23	Broadway/Victoria St.	Add 3rd WB Through Lane, Add EB Right-Turn Lane	Prior to occupancy of building(s) that would allow off-campus student enrollment to increase more than 2,400 FTES, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
24	Main St./Victoria St.	Add 3rd EB Through Lane, Add WB Exclusive Right-Turn Lane	Prior to occupancy of the mixed-use area, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
		Add EB Exclusive Right-Turn Lane	Prior to occupancy of building(s) that would allow off-campus student enrollment to increase more than 2,400 FTES, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.
26	Avalon Blvd./Del Amo Blvd.	Add SB Exclusive Right-Turn Lane Convert WB Exclusive Right-Turn Lane into an WB Through/Right-Shared Lane	Prior to occupancy of building(s) that would allow off-campus student enrollment to increase more than 800 FTES, and the City has a fee program in place, and the City grants approval for construction of the proposed roadway improvement.

ApproachDel:	15.8	xxxxxx	xxxxxx	xxxxxx

Approach[northbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=6]

FAIL - Approach volume less than 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=1462]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

Intersection #6 Central Ave. & Project Driveway/Beachey Pl.

Base Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound	South Bound	East Bound	West Bound
Movement:	L - T - R	L - T - R	L - T - R	L - T - R
Control:	Uncontrolled	Uncontrolled	Stop Sign	Stop Sign
Lanes:	0 0 1 1 0	1 0 2 0 0	0 0 0 0 0	1 0 0 0 1
Initial Vol:	0 661 66	77 619 0	0 0 0 0	12 0 27
ApproachDel:	xxxxxx	xxxxxx	xxxxxx	15.7

Approach[westbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.2]

FAIL - Vehicle-hours less than 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=39]

FAIL - Approach volume less than 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=1462]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

Intersection #1 Victoria St. & Drive D

Base Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound	South Bound	East Bound	West Bound
Movement:	L - T - R	L - T - R	L - T - R	L - T - R
Control:	Stop Sign	Stop Sign	Uncontrolled	Uncontrolled
Lanes:	1 0 0 0 1	0 0 0 0 0	0 0 2 0 1	1 0 2 0 0
Initial Vol:	99 0 20	0 0 0	0 1104 114	6 957 0
ApproachDel:	143.6	xxxxxx	xxxxxx	xxxxxx

Approach[northbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=4.7]

FAIL - Vehicle-hours less than 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=119]

FAIL - Approach volume less than 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=2300]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Volume Signal Warrant Report [Urban]

Intersection #1 Victoria St. & Drive D

Base Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound	South Bound	East Bound	West Bound
Movement:	L - T - R	L - T - R	L - T - R	L - T - R
Control:	Stop Sign	Stop Sign	Uncontrolled	Uncontrolled

Peak Hour Delay Signal Warrant Report

Intersection #5 Central Ave. & Charles Willard St.

Base Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound	South Bound	East Bound	West Bound
Movement:	L - T - R	L - T - R	L - T - R	L - T - R
Control:	Uncontrolled	Uncontrolled	Stop Sign	Stop Sign
Lanes:	0 1 0 1 0	1 0 1 1 0	0 0 1! 0 0	0 1 0 0 1
Initial Vol:	15 612 9	35 743 14	10 3 32	18 1 68
ApproachDel:	xxxxxx	xxxxxx	19.3	15.4

Approach[eastbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.2]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=45]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=4][total volume=1560]

SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

Approach[westbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.4]

FAIL - Vehicle-hours less than 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=87]

FAIL - Approach volume less than 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=4][total volume=1560]

SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Appendix F

Trip Generation Rates for On-Campus Students from Similar Facilities

Trip Generation Rates for On-Campus Students from Similar Facilities

Source 1: Trip generation rates for on-campus students from *Traffic Impact Study for Proposed Resident Halls A and B* for Sacramento State University, dated April 2014. The number of students in existing resident halls were 1,600.

Time Period	Direction	West Driveway (Int #3)		Main Driveway (Int #4)		East Driveway (Int #5)		Total All Sites	VT per Existing Resident	% To/From West	% To/From East
		To/From West	To/From East	To/From West	To/From East	To/From West	To/From East				
AM Peak Hour	Inbound	20	6	1	0	15	10	52	0.0325	69.2%	30.8%
	Outbound	4	0	5	8	6	4	27	0.0169	55.6%	44.4%
PM Peak Hour	Inbound	25	2	24	13	14	18	96	0.0600	65.6%	34.4%
	Outbound	17	6	25	27	17	15	107	0.0669	55.1%	44.9%

Exhibit 1: Computation of Vehicular Trip Generation Rate

Source 2: Trip generation survey data from *Transportation Impact Study for the 2017 Campus Master Plan Cal Poly San Luis Obispo* was obtained. The survey was performed in November 9, 2016 which includes trip generation rate survey for on-campus student housing, called Poly Canyon Village with 2,700 students.

Based on two trip generation rate surveys above, weighted average trip generation rates were calculated and summarized in the following table:

Source	On-Campus Students		AM		PM	
			In	Out	In	Out
Sacramento State University	1,600	Trips	52	27	96	107
		Rates	0.0325	0.0169	0.0600	0.0669
Cal Poly	2,700	Trips	25	37	92	104
		Rates	0.0093	0.0137	0.0341	0.0385
CSUDH (Average)	4,300	Trips	77	64	188	211
		Rates	0.0179	0.0149	0.0437	0.0491

Approach[northbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=OVERFLOW]

SUCCEED - Vehicle-hours >= 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=380]

SUCCEED - Approach volume >= 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=3440]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Signal Warrant Rule #1: [vehicle-hours=0.3]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=100]

SUCCEED - Approach volume greater than or equal to 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=1590]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Approach[southbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.5]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=120]

SUCCEED - Approach volume greater than or equal to 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=1510]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Approach[northbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=8596.2]

SUCCEED - Vehicle-hours >= 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=940]

SUCCEED - Approach volume >= 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=4210]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Signal Warrant Rule #1: [vehicle-hours=629.0]

SUCCEED - Vehicle-hours greater than or equal to 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=270]

SUCCEED - Approach volume greater than or equal to 100 for one lane approach.

Signal Warrant Rule #3: [approach count=4][total volume=3420]

SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

-----|-----|-----|-----|-----|

Approach[westbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=4.8]

FAIL - Vehicle-hours less than 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=90]

FAIL - Approach volume less than 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=4][total volume=3420]

SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Approach[southbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=322.4]

SUCCEED - Vehicle-hours >= 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=1130]

SUCCEED - Approach volume >= 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=2860]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Volume Signal Warrant Report [Urban]

Intersection #9 University Dr. & Toro Center Dr.

Base Volume Alternative: Peak Hour Warrant Met

Approach:	North Bound	South Bound	East Bound	West Bound
Movement:	L - T - R	L - T - R	L - T - R	L - T - R
Control:	Stop Sign	Stop Sign	Uncontrolled	Uncontrolled

Peak Hour Delay Signal Warrant Report

Intersection #1 Victoria St. & Drive D

Base Volume Alternative: Peak Hour Warrant Met

Approach:	North Bound	South Bound	East Bound	West Bound
Movement:	L - T - R	L - T - R	L - T - R	L - T - R
Control:	Stop Sign	Stop Sign	Uncontrolled	Uncontrolled
Lanes:	1 0 0 0 1	0 0 0 0 0	0 0 2 0 1	1 0 2 0 0
Initial Vol:	210 0 140	0 0 0 0	0 970 710	450 830 0
ApproachDel:	+Inf	xxxxxx	xxxxxx	xxxxxx

Approach[northbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=OVERFLOW]

SUCCEED - Vehicle-hours >= 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=350]

SUCCEED - Approach volume >= 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=3310]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SUCCEED - Vehicle-hours greater than or equal to 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=170]
SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=4][total volume=3460]
SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

Approach[westbound][lanes=2][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=1.5]
FAIL - Vehicle-hours less than 5 for two or more lane approach.
Signal Warrant Rule #2: [approach volume=40]
FAIL - Approach volume less than 150 for two or more lane approach.
Signal Warrant Rule #3: [approach count=4][total volume=3460]
SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

ApproachDel:	xxxxxx	xxxxxx	xxxxxx	xxxxxx

Approach[northbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=5274.7]

SUCCEED - Vehicle-hours >= 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=890]

SUCCEED - Approach volume >= 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=4090]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

Intersection #5 Central Ave. & Charles Willard St.

Base Volume Alternative: Peak Hour Warrant Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Uncontrolled			Uncontrolled			Stop Sign			Stop Sign		
Lanes:	0	1	0	1	0	1	0	0	1	0	1	0
Initial Vol:	90	1290	10	40	1400	180	190	0	70	20	0	70
ApproachDel:	xxxxxx			xxxxxx			7392.0			179.3		

Approach[eastbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=533.9]

SUCCEED - Vehicle-hours greater than or equal to 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=260]

SUCCEED - Approach volume greater than or equal to 100 for one lane approach.

Signal Warrant Rule #3: [approach count=4][total volume=3360]

SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

Approach[westbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=4.5]

FAIL - Vehicle-hours less than 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=90]

FAIL - Approach volume less than 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=4][total volume=3360]

SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

Intersection #9 University Dr. & Toro Center Dr.

Base Volume Alternative: Peak Hour Warrant Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0	0	0	0	0	0	1	0	2	0	0	1
Initial Vol:	0	0	0	430	0	640	250	430	0	0	660	440
ApproachDel:	xxxxxxx			1097.7			xxxxxxx			xxxxxxx		

Approach[southbound][lanes=2][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=326.2]

SUCCEED - Vehicle-hours >= 5 for two or more lane approach.

Signal Warrant Rule #2: [approach volume=1070]

SUCCEED - Approach volume >= 150 for two or more lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=2850]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Volume Signal Warrant Report [Urban]

Intersection #9 University Dr. & Toro Center Dr.

Base Volume Alternative: Peak Hour Warrant Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0	0	0	0	0	0	1	0	2	0	0	1
Initial Vol:	0	0	0	430	0	640	250	430	0	0	660	440

Major Street Volume: 1780

Minor Approach Volume: 1070

Minor Approach Volume Threshold: 126 [less than minimum of 150]

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

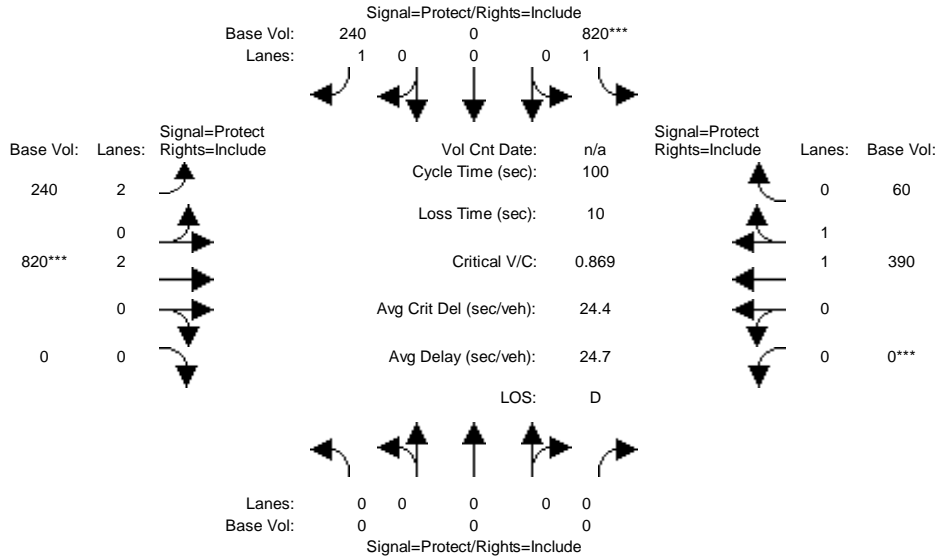

The peak hour warrant analysis in this report is not intended to replace

a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.
